

CONTENTS

	PAGE
1. INTRODUCTION .	1
2. SELECTION OF MATERIAL FOR STUDY	1
3. INFORMATION DESIRED AND EQUIPMENT USED .	2
4. EXPERIMENTAL PROCEDURE .	2
4.1. Electron Probe Microanalysis	2
4.2. Computer Metallography	3
4.3. Inclusion Counting	4
4.4. Studies on Etched Structures	6
5. RESULTS	6
5.1. Homogeneity	6
a. Nickel in the Cross Section .	6
b. Iron in the Cross Section .	6
c. Nickel in the Longitudinal Section	6
d. Iron in the Longitudinal Section	7
5.2. Inclusions in the Steel	8
a. Identification of the Inclusions .	8
b. Volume and Weight Percentages of Nonmetallic Inclusions .	8
c. Estimation of the Weight Percent of Inclusions	8
d. Estimation of Number and Size of Inclusions	8
e. Mean Free Path Between Inclusions	9
5.3. Analysis of the Etched Structure in NBS-461 Steel	9
a. Ferrite and Pearlite Percentages	9

APPENDIX	13

LIST OF TABLES

TABLE No.

1. NBS Spectrographic low-alloy steel standard No. 461	2
2. Nickel concentration in cross sections of NBS-461 steel	6
3. Nickel concentration in longitudinal sections of NBS-461 steel	8

LIST OF FIGURES

FIGURE No.

	PAGE
1. NBS-461 steel polished for inclusion counting and microprobe examination	4
2. Typical inclusion in longitudinal section	5
3. Cross section of NBS-461 steel etched for 9 s in 3-1/2 percent HNO ₃	7
4. Longitudinal section of NBS steel etched for 10 s in 3-1/2 percent HNO ₃	7
5. Histogram of ASTM grain size numbers in NBS-461 steel	11
