

Introduction

Mechanism of corrosion and corrosion protection	11
Forms and grades of zinc and zinc coatings	12
Composition and forms of zinc	12
Zinc coatings	14
Hot dip galvanizing	15
Zinc plating	16
Metal spraying (metallizing)	16
Sherardizing	17
References	18

Corrosion resistance of zinc and zinc coatings in the atmosphere

Nature of the corrosion behavior	20
General considerations	20
Influence of atmospheric variables	22
Relative humidity and rainfall	22
Industrial and marine pollutants	34
Initial atmospheric conditions	42
Corrosion-rate data for zinc and zinc alloys	44
Wrought zinc	44
Zinc die castings	66
Corrosion-rate data for zinc-coated steel	66
General	66
Effect of process details in hot-dip galvanizing	68
Additions to the bath	68
Heat treatment	74
Performance of zinc coatings in atmospheric environments	80
Effect of shape and dimensions of zinc-coated products	85
Zinc-coated hardware	85
Zinc-coated wire and wire products	89
References	96

✚ Corrosion resistance of zinc in water

General considerations	100
Variables affecting the corrosion of zinc by distilled water	101
Agitation, aeration, and carbon dioxide	101
Temperature	102
Resistance of zinc and zinc coatings to domestic and industrial waters	111
Cold water	111
Hot water	112
Resistance of zinc to natural and sea water	118
References	129

Corrosion resistance of zinc to soils

Characteristics of soils and their relation to corrosion	132
Corrosion of zinc in soils	132
Corrosion of hot dip galvanized steel in soils	133
References	136

Corrosion resistance of zinc and zinc coatings to chemical environments 138

References 180
