

CONTENTS

1	A Methodology for Solving Polymer Problems	1
2	Sampling and Sample Preparation	21
3	Microscopy of Polymers	37
4	Fourier-Transform Infrared Spectroscopic Analysis Methods for Polymers	71
5	Thermal Analysis of Polymers	107
6	Identification and Analysis of Polymers	147
7	Analysis of Blends, Copolymers and Oligomers	193
8	Identification and Analysis of Thermoset Elastomers	215
9	Analysis of 'Difficult' or Intractable Polymer Samples	230
10	Analysis of Additives in Polymers and Elastomers	240
11	Analysis of Contaminants and Inclusions in Polymers	270
12	Mechanical Failure Mechanisms of Polymers	304
13	Chemical Attack of Polymers	363
14	Oxidative Degradation of Polymers	397
15	Failure of Fiber-Reinforced Composites	449
16	Problems Related to Additives in Polymers	482
17	Weathering of Polymers	518
18	Environmental Stress Cracking of Polymers	546
19	Residual Stresses and Weld Lines in Polymers	587
20	Odour, Tainting and Outgassing Problems with Polymers	622
21	Adhesion Problems with Polymers and Interfaces	647
22	Voids, Blisters and Surface Defects	670
23	Discoloration of Polymers	692
	Index	741
