

CONTENTS

1. Molecular Optics: Nonlinear Optical Properties of Organic and Polymeric Crystals	1
2. Design and Characterization of Molecular and Polymeric Nonlinear Optical Materials: Successes and Pitfalls	27
3. Organic Materials for Optical Second Harmonic Generation	57
4. Nonlinear Organic Crystals: Theoretical Concepts, Materials, and Optical Properties	81
5. Characterization of Liquid Crystalline Polymers for Electro-optic Applications	109
6. Second-Order Nonlinear Media from Spiropyran Merocyanine Quasicrystals	135
7. Nonlinear Optical Interactions in Organic Crystal Cored Fibers	153
8. Optical Nonlinearities and Photoinduced Solitons in Conjugated Polymer Crystals	167
9. Nonlinear Optical Properties of Polydiacetylenes	187
10. Third-Order Nonlinear Susceptibility in Multilayers of Polydiacetylene	213
11. Epitaxial Growth of Polydiacetylenes	229
12. Nonlinear Electro-optic and Dielectric Properties of Flexible Polymers	235
Index	245
