

CONTENTS

1	Flow properties – an introduction	1
1.1	Introduction	1
1.2	Rheological equations of state	2
1.3	Non-Newtonian fluids	6
2	Flow through channels of simple cross-section	18
2.1	Introduction	18
2.2	Flow through a pipe (capillary flow)	18
2.3	Flow between parallel plates	25
2.4	Flow through an annulus	26
2.5	Summary	27
	Appendix: Shear stress in pipe flow	27
3	The measurement of shear flow properties	29
3.1	Introduction	29
3.2	Types of capillary viscometer	29
3.3	Review of assumptions	31
3.4	Corrections for factors arising outside the capillary	40
3.5	Capillary rheometry measurements	49
3.6	Brabender ‘viscometry’	50
4	Factors affecting viscous shear flow	54
4.1	Introduction	54
4.2	Effect of temperature	54
4.3	Effect of pressure	57
4.4	Effect of shear history	62
4.5	Viscosity change during extrusion	65
4.6	Effect of molecular structure on viscous flow	67
4.7	Liquid crystal polymers	74
5	Elastic effects in polymer melt flow	78
5.1	Introduction	78
5.2	Die swell	78
5.3	Elastic turbulence or melt fracture	84
5.4	Sharkskin	93
5.5	Frozen-in orientation	96
5.6	Draw-down	98
5.7	Measurement of elastic effects	100

6 Elongational flow	104
6.1 Introduction	104
6.2 Terminology	105
6.3 Components of tensile deformation	107
6.4 The measurement of elongational behaviour	110
6.5 Types of elongational flow behaviour	115
6.6 Elongational flow in polymer processing	115
7 The application of rheological studies to polymer processing	121
7.1 Introduction	121
7.2 Injection moulding of thermoplastics	122
7.3 Bottle blowing and related blow moulding operations	138
7.4 Compression and transfer moulding of thermosetting materials	145
7.5 Transfer moulding of thermosetting materials	148
7.6 Extrusion	149
7.7 Calendering	152
7.8 Vacuum forming and related shaping applications	154
7.9 Flow properties of individual thermoplastics	155
8 More complex rheological problems	167
8.1 Introduction	167
8.2 Components of stress	168
8.3 Time derivatives	175
8.4 The equation of continuity	176
8.5 The equations of momentum	178
8.6 The equation of energy	179
8.7 Rheological equations of state	183
8.8 Examples of applications of continuum mechanics in rheology	184
8.9 The lumped parameter approach	199
8.10 Measurement of elastic effects polymer flow	201
Appendix	
A.1 Shear stress at the wall during flow between parallel plates	207
A.2 Shear rate at well of plate	208
A.3 The special case of power law fluids in parallel plate flow	210
A.4 The special case of Newtonian fluids in parallel plate flow	212
A.5 Flow through an annulus	212
A.6 Shear stress in slit flow	214
A.7 Velocity distribution in a pipe	215
A.8 Velocity distribution between parallel plates	217
A.9 Analysis of slippage in capillary flow	218
A.10 Analysis of slippage in slit flow	219
A.11 Suggestions for further reading	220
Index	222
