

CONTENTS

Chapter 1 Introduction to friction and wear	1
Abstract	1
1. Friction and wear: sub-areas of tribology	2
2. Terminology	2
3. Mechanisms of friction	3
4. Mechanisms of wear	11
5. Friction and wear as systems properties	19
References	22
 Chapter 2 Interfacial friction of polymer composites. General fundamental principles	 25
Abstract	26
1. Introduction	26
2. Deformation or ploughing friction	29
3. Interfacial or adhesion friction	37
4. Other models of friction	51
5. Lubricated systems	53
6. Conclusions	55
References	56
 Chapter 3	
Abstract	61
1. Introduction	62
2. Types of microstructure and anisotropy	63
3. Formal description of friction and wear	66
4. The coefficient of wear and the role of macrohardness	68
5. Components of the coefficient of friction	70
6. Components of the wear coefficient, k , and the role of fracture	71
7. Isotropic heterogeneous microstructures	76
8. Anisotropic structures	79
9. Relations between friction and wear	85
References	88

Chapter 4 Tribological properties of selected polymeric matrix composites against steel surfaces	89
Abstract	90
1. Introduction	91
2. Experimental	94
3. Coefficients of friction given by selected polymeric materials against smooth steel	100
4. Coefficients of friction given by selected polymeric materials against an abrasive counterface	107
5. Abrasive wear of selected polymeric materials	110
6. Conclusions	313
References	134
 Chapter 5 Effects of various fillers on the friction of PTFE-based composites	 137
Abstract	138
1. Introduction	138
2. Molecular and morphological characteristics of PTFE	138
3. Tribological characteristics of PTFE	140
4. Friction and wear of glass and carbon fiber-filled PTFE	147
5. Friction and wear of PTFE incorporating various fillers	152
6. Roles of various fillers incorporated in PTFE	164
7. Effect of water lubrication on the friction and wear of PTFE-based composites	167
8. Conclusions	173
References	174
 Chapter 6 Friction and wear of metal matrix-graphite fiber composites	 175
Abstract	175
1. Introduction	175
2. Materials	176
3. Friction and wear behavior	180
4. Wear mechanisms	190
5. Potential applications	200
6. Conclusions	202
References	202

Chapter 7 Friction and wear performance of unidirectionally oriented glass, carbon, aramid and stainless steel fiber-reinforced plastics	205
Abstract	205
1. Introduction	206
2. Experimental	207
3. Law of mixtures for calculating the friction coefficient	210
4. Results	211
5. The wear equation for FRP	219
6. Some topics related to the tribology of FRP	221
7. Concluding remarks	229
References	230
 Chapter 8 Wear of reinforced polymers by different abrasive counterparts	 233
Abstract	233
1. Introduction	234
2. Experimental details	238
3. Sliding wear against steel counterparts	241
4. Abrasion by hard abrasive particles	258
5. Concluding remarks	281
References	285
 Chapter 9 Mild wear of rubber-based compounds	 289
Abstract	289
1. Introduction	290
2. Mechanical behaviour of rubber	291
3. Conditions and parameters influencing the wear process	297
4. Three phases of wear	300
5. Special wear patterns	318
6. Tendencies and suggestions	323
References	325
 Chapter 10 The wear and friction of commercial polymers and composites	 329
Abstract	329
1. Introduction	330
2. Applications	331
3. Performance rating	333
4. Basic friction and wear data	333
5. Factors affecting friction and wear	338
6. Factors influencing materials selection	350
7. Selection of Materials	360
References	361

Chapter 11 Composites for aerospace dry bearing applications	363
Abstract	363
1. Introduction	364
2. Materials	365
3. Performance testing	368
4. Influence of operating parameters on performance	373
5. Materials development	390
6. Life prediction	393
7. Future trends	394
References	395
 Chapter 12 Self-lubricating composites for extreme environmental conditions	 397
Abstract	397
1. Introduction	398
2. Composites for extreme triboenvironments	400
3. Conclusions	442
References	444
 Author Index	 449
 Subject Index	 457
