

**CONTENTS**

<b>Chapter 1 Fibrous reinforcements for composite materials</b>	<b>1</b>
General introduction F R JONES	1
1.1 Acicular particulate reinforcement R ROTHON	4
1.2 Alumina fibres J E BAILEY	8
1.3 Aramid fibres L S PENN	12
1.4 Boron fibres J E BAILEY	15
1.5 Boron nitride and other covalent ceramic fibres J H SHARP and R J P EMSLEY	18
1.6 Carbon fibres from PAN – preparation and properties F R JONES	19
1.7 Carbon fibres from PAN – Structure D J JOHNSON	24
1.8 Carbon fibres from PAN – surface treatment F R JONES	29
1.9 Carbon fibres from pitch B RAND and M TURPIN	34
1.10 Glass fibres – type and form F R JONES	38
1.11 Glass fibres – surface treatment F R JONES	42
1.12 Knitted reinforcements F K KO	48
1.13 Polyethylene fibres D L M CANSFIELD and I M WARD	54
1.14 Rigid rod polymer fibres R J YOUNG	58
1.15 Silicon carbide fibres J H SHARP and R J P EMSLEY	62
1.16 Silicon nitride and silicon carbonitride fibres R J P EMSLEY and J H SHARP	66
<b>Chapter 2 Matrices</b>	<b>69</b>
2.1 Advanced thermoplastics J BARNES	69
2.2 Conventional thermoplastics R S BAILEY	74
2.3 Conventional thermoplastics – pultruded composite tapes G CUFF	79
2.4 Epoxy resin F R JONES	86
2.5 High temperature resins – thermosetting polyimides J N HAY	96
2.6 High temperature resins – other thermosets J N HAY	101
2.7 Phenolic resins – laminates P A SHEARD	106
2.8 Phenolic resins – moulding compounds A SMITH	109
2.9 Time-temperature-transformation diagrams for thermosets B ELLIS	115
2.10 Unsaturated polyester resins R A PANTHER	121
2.11 Urethane methylacrylates F R JONES	127
2.12 Vinyl ester resins F R JONES	129

<b>Chapter 3 Fabrication of polymer composites</b>	<b>133</b>
3.1 A guide to selection F R JONES	133
3.2 Autoclave moulding F R JONES	138
3.3 Centrifugal casting F R JONES	144
3.4 Continuous fibre reinforced thermoplastic composites – shaping J BARNES	145
3.5 Bulk moulding compound and dough moulding compounds A G GIBSON	150
3.6 Filament winding V MIDDLETON	154
3.7 Hand lay T M GOTCH	160
3.8 Injection moulding – thermoplastics M J FOLKES	165
3.9 Injection moulding – thermosets A G GIBSON	168
3.10 Injection moulding – fibre management by shear controlled orientation P S ALLAN and M J BEVIS	171
3.11 Long glass fibre reinforced thermoplastic sheet P M JACOBS	176
3.12 Pultrusion A G GIBSON	180
3.13 Recycling of polymer fibre composites D W CLEGG	183
3.14 Reinforced reaction injection moulding (RRIM) F R JONES	187
3.15 Resin transfer moulding (RTM) CD RUDD	192
3.16 Resin transfer moulding (RTM) – practicalities A A ADMS	198
3.17 Sheet moulding compounds A G GIBSON	200
3.18 Spray deposition T M GOTCH	205
3.19 Structural RIM (SRIM) P A SHEARD and M PARMAR	209
<b>Chapter 4 Mechanical properties of composites – micromechanics</b>	<b>212</b>
4.1 Continuous fibre reinforcement J E BAILEY	212
4.2 Continuous fibre reinforcement – Young's moduli J E BAILEY	215
4.3 Continuous fibre reinforcement – strength J E BAILEY	218
4.4 Continuous fibre reinforcement – off-axis properties of unidirectional laminae J E BAILEY	222
4.5 Hybrid effect M G BADER	225
4.6 Interfacial bond strength determination – critique I VERPOEST	230
4.7 Interfacial bond strength determination – fragmentation I VRPOEST and M DESAEGER	235
4.8 Interfacial bond strength determination – microdebond pull-out test L S PENN	238
4.9 Interfacial bond strength determination: pull-out test M J PITKETHLY	242
4.10 Laminates – angle plied S L OGIN	245
4.11 Laminates – crossply cracking F R JONES	249
4.12 Laminates – residual thermal and related strains F R JONES	254
4.13 Laminates – statistics of transverse cracking P W M PETERS	260

4.14 Short fibre reinforcement – direct measurement of fibre strain using Raman spectroscopy R J YOUNG	264
4.15 Short fibre reinforcement – stress transfer in discontinuous reinforcements M G BADER	269
4.16 Short fibre reinforcement thermoplastics M G BADER	274
4.17 Short fibre reinforcement thermosets F CHEN	278
<b>Chapter 5 Mechanical properties – macromechanics</b>	<b>286</b>
5.1 Damage accumulation – fracture mechanics S L OGIN	286
5.2 Delamination – fracture mechanics S L OGIN	289
5.3 Design considerations for aerospace applications G W MEETHAM	292
5.4 Failure criteria P A SMITH	296
5.5 Fatigue – aramid fibre reinforced plastics B HARRIS	299
5.6 Fatigue – carbon fibre composites P T CURTIS	305
5.7 Fatigue – glass fibre reinforced plastics B HARRIS	309
5.8 Fatigue – life prediction – role of materials and structure P IRVING	317
5.9 Fatigue – life prediction – damage calculation and assessment P IRVING	323
5.10 Impact performance – CFRP laminates	327
5.11 Impact performance – residual compression strength G DOREY	330
5.12 Impact resistance – fibre reinforced polymers P HOGG	334
5.13 Knitted fabric composites – properties F K KO	341
5.14 Laminate theory P A SMITH	347
5.15 Non-destructive evaluation of composites B HARRIS	351
5.16 Standard test methods for composite materials E W GODWIN	356
<b>Chapter 6 Environmental aspects</b>	<b>362</b>
6.1 Mechanical properties under hygrothermal conditions E G WOLFF	362
6.2 Moisture absorption – Fickian diffusion kinetics and moisture profiles T A COLLINGS	366
6.3 Moisture absorption – anomalous effects F R JONES	371
6.4 Osmosis and blistering in GRP F CHEN and A W BIRLEY	376
6.5 Stress corrosion cracking of GRP F R JONES	379
6.6 Thermal spiking/thermal cycling effects F R JONES	388
Glossary	392
Bibliography	395
Index of specific symbols	400
General index	403
