

CONTENTS

Section I. Micromechanics

1. Strength Theories of Filamentary Structures	3
2. Elastic Moduli of Fiber Reinforced Plastic Composites	13
3. Application of Point Matching to problems in Micromechanics	29
4. Mechanical Interactions in Fiber Reinforced Photoelastic	45
5. Crack Propagation in Fiber Reinforced Plastic Composites	63
6. Influence of Fracture Toughness and Flaws on the Interlaminar Shear Strength of Fibrous Composites	89
7. Relationship between Micromechanics and Structural Behavior of Fiber Reinforced Plastic Composites	110
8. Effects of Constituent Material Properties on the Stability of Fiber Reinforced Composite Plates	129
9. Structural Design with Composites	141

Section II. Fiber – Matrix Interface

1. Conformation of Polyesters Adsorbed on Solid Surfaces	163
2. The Adsorption of Methylchlorosilanes at Silica Surfaces	177
3. The Physical Chemical Nature of the Matrix – Glass Fiber Interface	199
4. The Adsorption of a Cationic Lubricant onto E-Glass Fibers	217
5. The Role of Water in Interfacial Interactions	225
6. Mechanism of Coupling by Silanes of Epoxies to Glass Fibers	237
7. Bonding Organic Polymers to Glass by Silane Coupling Agents	245
