Preface to the Reissue of the Materials Characterization Series xi

Preface to Series xii

Preface to the Reissue of *Characterization of Polymers* xiii

Preface xiv

Contributors xviii

POLYMER STRUCTURES AND SYNTHESIS METHODS

1.1 Introduction 1

1.2 Chain Structures in Natural and Synthetic Polymers 1
 The Nature of Polymeric Materials 1, The Composition of Polymeric Materials 3, Molecular Weight and Its Distribution 11, Polymer Chain Configurations 12, Polymer Chain Conformations 14, Polymer Solid-State Structure, Morphology, and Transitions 15, Polymer Surface Structure 18

1.3 Polymer Synthesis 20
 Chain Reaction Polymerization 21, Coordination Polymerization 24, Step Reaction Polymerization 25

1.4 Summary 26

POLYMER FABRICATION TECHNIQUES

2.1 Introduction 28

2.2 Processing Techniques 29
 Foam Processing 31, Film-Forming Processes 31, Composites 32, Extrusion 34, Molding 35, Coatings 36, Other Methods 37

2.3 Applications 37
 Development of Spray-On Insulation for the Thermal Protection System of the External Tank in the Space Shuttle Program 37, Development of Thick, Thin, and Ultrathin Polyimide Films 40, Langmuir–Blodgett (L–B) Films 47, Polymer Composites 49, Molding Processes 55, Fiber Drawing and Surface Modification Processes 56

CHEMICAL COMPOSITION OF POLYMERS

- 3.1** Introduction 65
- 3.2** Chemical Composition: Questions to Ask 66
- 3.3** Techniques for Determination of Chemical Composition: What to Use to Ask the Questions 67
- 3.4** Illustrative Examples of Characterization of Chemical Composition of Polymers 72
Stoichiometry 72, Functionality 73, Phase Separation 80, Surface Modification 81, Interfacial Chemical Composition 83, Impurities 83
- 3.5** Summary: New Horizons 86

CHARACTERIZATION OF THE MORPHOLOGY OF POLYMER SURFACES, INTERFACES, AND THIN FILMS BY MICROSCOPY TECHNIQUES

- 4.1** Overview of Polymer Interfaces and Thin Films 92
- 4.2** Introduction to Microscopy Techniques 93
- 4.3** Optical Microscopy 94
- 4.4** Scanning Electron Microscopy 98
Low-Voltage High-Resolution Scanning Electron Microscopy 100,
Environmental Scanning Electron Microscopy 104
- 4.5** Transmission Electron Microscopy 106
- 4.6** Scanning Probe Microscopy 111
- 4.7** New Microscopies 116

STRUCTURE AND MORPHOLOGY OF INTERFACES AND THIN FILMS BY SCATTERING TECHNIQUES

- 5.1** Introduction 121
- 5.2** Industrial Applications 122
Adhesion 122, Biomedical Applications 124, Langmuir–Blodgett Films and Other Thin Films 125
- 5.3** Integrated Optics Method 127
Wave-Guiding 127, Nonlinear Optical Method 130
- 5.4** Reflectivity 136
- 5.5** Grazing Incidence X-Ray Scattering 139

SURFACE THERMODYNAMICS

- 6.1** Introduction 150
- 6.2** Theory of Wetting, Spreading, and Adhesion 151
- 6.3** Experimental Methods 154
 - Contact Angles 154, Adsorption and Calorimetry 157, Inverse Gas Chromatography 162, Infrared (FTIR) Spectroscopy 164

SURFACE MODIFICATION OF POLYMERS

- 7.1** Introduction 169
- 7.2** Wet-Chemical Modification of Polymer Surfaces 171
 - Surface Roughening and Seeding in Placing Operations 171, Surface Treatment for Bondability 173, Surface Treatment Using Adhesion Promoters 175, Surface Modification by Photochemical Methods 177
- 7.3** Dry Modification Techniques 179
 - Modification by High- and Low-Energy Ion Beams 179, Plasma Modification of Polymer Surfaces 187, Other Dry Treatment Techniques 191
- 7.4** Summary 192

ADHESION

- 8.1** Introduction 198
- 8.2** Physical Meaning of Adhesion 200
- 8.3** Theoretical Analysis of Adhesion 200
- 8.4** Experimental Measurement of Adhesion 203
- 8.5** Standardization of Test Procedure 205
- 8.6** Locus of Failure 205
- 8.7** Key Adhesion Issues 207
- 8.8** Illustrative Examples 208
- 8.9** Summary 209

CHEMISTRY, REACTIVITY, AND FRACTURE OF POLYMER INTERFACES

- 9.1** Introduction 215
- 9.2** Polyimide Structure and Properties 218

- 9.3 Polymer–Polymer Interfaces 222
- 9.4 Metal–Polymer Interfaces 224
- 9.5 Polymer–Metal Interfaces 230
- 9.6 Thermal Stress and Interfacial Fracture 234

THE POLYMER–POLYMER INTERFACE

- 10.1 Introduction 244
- 10.2 Techniques for Measuring Diffusion Distances Much Greater Than Molecular Size 247
- 10.3 Techniques for Measuring Concentration Profiles on the Order of Molecular Size 252
- 10.4 Summary 259

FRICTION AND WEAR (TRIBOLOGY)

- 11.1 Introduction 262
- 11.2 Basic Concepts 263
- 11.3 Tribological Applications 264
- 11.4 Mechanisms of Friction and Wear 265
 - Friction 266, Wear 268
- 11.5 Correlation of Properties with Friction and Wear 269
 - Energy-to-Rupture and Abrasive Wear 269, Cohesive Energy and Abrasive Wear 271, Ratio of Applied Stress to Failure Strength and Wear 271, Molecular Weight and Wear 271, Crystallinity and Wear 273, Loss Tangent and Friction 273, Closure 274
- 11.6 Measurement of Friction and Wear 274
 - ASTM Laboratory Tests 276, Designing Laboratory Tests 284
- 11.7 Reporting and Interpretation of Measurements 291
- 11.8 Summary 293
