Foreword	•••••		xi
Preface			xiii
CHAPTER	1	Nanoscience and Nanotechnology	1
	-	Introduction to the nanoscale	
		What makes the nanoscale important?	
		Properties of nanoparticles and effect of size	
		1.3.1 Morphological and structural properties	
		1.3.2 Thermal properties	
		1.3.3 Electromagnetic properties	
		1.3.4 Optical properties	
		1.3.5 Mechanical properties	
	1.4	N&N history.	. 10
		1.4.1 Types of nanotechnology	.13
	1.5	Nano in history	. 13
	1.6	Moore's Law	. 15
	1.7	Applications of nanotechnology	. 22
		1.7.1 Aviation and space	.22
		1.7.2 Medicine	.22
		1.7.3 Food	.25
		1.7.4 Electronics	.26
		1.7.5 Energy	.27
		1.7.6 Air pollution and water	.28
		1.7.7 Textiles	.29
		1.7.8 Sports	.30
	1.8	Nanoscience and nanotechnology: A look	
		to the future	. 30
	To l	earn more	.33
	Ref	erences	. 33
	•	0	
CHAPTER			
	2.1	Conventional engineering materials	
		2.1.1 Metals	
		2.1.2 Polymers	
	~ ~	2.1.4 Composites	
	2.2	The concept of composites	
		2.2.1 Functions of the reinforcement and matrix	

		2.2.2 Classification of composites	.49
	2.3	Raw material for manufacture of composites	. 53
		2.3.1 Resins	.53
		2.3.2 Reinforcements	.57
	2.4	Advantages and disadvantages of composites	. 61
		Influence of fiber length in fiber composites	
		Applications of composites	
	To l	earn more	. 71
	Ref	erences	.71
CHAPTER	3	Allotropes of Carbon and Carbon Nanotubes	73
		Allotropes of carbon	
		Carbon nanotubes	
	0.2	3.2.1 History of CNTs	
		3.2.2 Structure of CNTs	
		3.2.3 Mechanical properties of CNTs	
		3.2.4 Transport properties of CNTs	
	3.3	Treatment of CNTs	
		3.3.1 Purification and oxidation of CNTs	
		3.3.2 Chemical functionalization of CNTs	
	To l	earn more	
		erences	
CHAPTER	4	Production of CNTs and Risks to Health	03
		Production methods of carbon nanotubes	
		4.1.1 Arc discharge	
		4.1.2 Laser ablation	
		4.1.3 Chemical vapor deposition	
		4.1.4 Conversion of carbon monoxide at high pressure	
	4.2	Cost and production capacity of CNTs	
		CNTs: risks to health, safe disposal, and environmental	
		concerns	108
	4.4	Commercially available CNTs	119
	To l	earn more	120
	Refe	erences	120
CHAPTER	5	Fundamentals of Polymer Matrix Composites	
	-	Containing CNTs	25
	5.1	Use of CNTs for improvement of polymer properties	
		Mechanical properties of composites containing CNTs	
		5.2.1 Critical length and aspect ratio.	

		5.2.2 Density, valuemetric componentian, and freation	
		5.2.2 Density, volumetric concentration, and fraction of CNTs	131
		5.2.3 Elastic modulus of nanocomposites	
		5.2.4 The Einstein equation	
		5.2.5 The series and parallel models	
		5.2.6 Cox model	
		5.2.7 Halpin–Tsai model	
		5.2.8 Nielsen model	
		5.2.9 Tensile strength of nanocomposites	145
		5.2.10 Effective properties of CNTs and the modified	
		Halpin–Tsai model	147
		5.2.11 Final considerations about the mechanical	
		properties	151
	5.3	Thermal conductivity of composites containing CNTs	152
		5.3.1 Series and parallel models	152
		5.3.2 Geometric model	154
		5.3.3 Nan model	157
		5.3.4 Hatta model	158
		5.3.5 Nielsen model	159
	5.4	Electrical conductivity of composites containing CNTs	161
		To learn more	168
		References	168
CHAPTER	6	Processing of Polymer Matrix Composites	
		Containing CNTs	171
	6.1	Processing of polymer matrix composites containing	
		CNTs.	172
	6.2	Technologies applied for the preparation of polymeric	
		matrix nanocomposites	175
		6.2.1 Magnetic stirring	175
		6.2.2 Mechanical stirring	177
		6.2.3 High-shear mixer	177
		6.2.4 Sonication	180
		6.2.5 Dual asymmetric centrifugation	182
		6.2.6 Three-roll mill (calender)	184
		6.2.7 Extrusion	185
