

## CONTENTS

	Page
Introduction	1
Morphological Analysis of Carbon Black	3
Electron Microscope Size Determinations	4
Automate Image Analysis	4
Experimental Procedures	5
Results	12
Discussion	17
Standardization of Mooney Viscometer and Oscillating-Disk Cure Meter	19
Temperature of the Rubber in the Die Cavity	21
Friction Between Stem of Disk or Rotor and Lower Die	23
Slippage at the Rubber-Metal Interface	25
Pressure on the Rubber During Test	26
Scale Calibration	28
Conclusions	29
Measuring Dynamic Properties of Vulcanizates	31
Nomenclature	31
Two Components of Complex Modulus	33
Three Regions of Modulus as a Function of Temperature or Rate	35
Four Elastic Constants of Rubber	36
Shear Vibrometer	37
Equation of Motion of a Spring-Dashpot-Mass Model	38
Parallelism of Complex Modulus and Complex Spring Rate	39
Separation of the Observed Total Dynamic Stress into Components	41
Three Types of Dynamic Tests	42
Forced Vibration Resonant Systems	43
Free Vibration Systems	45
Forced Vibration Nonresonant Systems	47
Compounding and Engineering with Rubber	51
Discussion	52
Plasticity Retention Index-Its Measurement and Significance for Natural Rubber	56
Measurement of PRI	57
Factors Affecting Measurement of PRI	57
Reproducibility of PRI Test	67
Factors Influencing PRI of Raw Natural Rubber	68
Consequential Effects of PRI	70
Conclusion	72
Application of Pyrolysis-Gas Chromatography to Qualitative and Quantitative Analysis of Polymers	74
Procedure	76
Results and Discussion	78
Identification and Quantitation	80
Conclusion	86
Standards and Standardization	87
Standardization	92
Conclusions	94

New Low Temperature Test Equipment for Rubbers	104
Background Investigations	104
Development of New Equipment	107
Evaluation of New Test Equipment	114
Summary	125
Application of the Rheometrics Mechanical Spectrometer to Rubber Testing	127
The Mechanical Spectrometer	129
Eccentric Rotating Disks	132
Curing Between ERD	136
Other Measurements	138
Conclusions	139
A Review of Recent Developments in Forced Vibration Dynamic Testing of Elastomers	142
Nomenclature	142
Dynamic Behavior of Elastomers	144
Measurement of Dynamic Properties	148
Test Equipment	153
Variability of the Material	158
Summary	159
Recommendation for Future Research and Development	160
Computerized Physical Testing of Elastomers	162
Computers and Physical Testing	163
Conclusions	173
New Automatic Tensile Tester	178
Early Development	179
Automatic Operation	180
Data	184
Productivity	185
Conclusion	186
Tire Cord Fatigue Studies Using a Modified SCEF Tester	187
Description of Apparatus	189
Performance	190
Conclusions	192
