

## CONTENTS

	Page
<b>Symposium on Methods of Test for Design of Bituminous Paving Mixtures</b>	
General Factors in Design of Bituminous Paving Mixtures	1
Discussion	8
Theory and Application of a Gyrotory Testing Machine for Hot-Mix Bituminous	9
Discussion	19
Application of the Marshall Method to Hot Mix Design	22
Discussion	36
Control of Bituminous Shoulder Construction for the Northern Illinois Toll	
High way	41
Discussion	49
Triaxial Testing of Bituminous Mixtures	51
Discussion	64
Correlation of Hveem Stabilometer and Cohesimeter Test Results and Kneading	
Compactor Densities with Service Records of Bituminous Pavements	70
Void Requirements for Dense-Graded Bituminous Paving Mixtures	81
Discussion	108
Use of the Immersion-Compression Test in Evaluating and Designing Bituminous	
Paving Mixtures	113
Discussion	126
<b>Symposium on Practical and Statistical Significance of Tests and Properties of Bituminous Binders</b>	
Introduction	133
The Evolution of ASTM Tests and Specifications for Asphaltic Paving Materials	135
Practical Significance of Tests on Asphalt Cements	143
Discussion	165
Precision of Present ASTM Tests on Bitumens and Bituminous Materials	175
Discussion	196
Fundamental Statistical Concepts in Testing	197
Summary—Possibilities for Extension and Improvement of ASTM Tests on Bituminous	
Paving Binders	207
<b>Papers on Road and Paving Materials</b>	
Fundamental Viscosity Versus Saybolt Furol Viscosity for Refinery control of	
Cutback Asphalt	211
Discussion	222
Density Changes in Asphalt Pavement Core Samples	226
Discussion	229
