Chapter 5	STRESS-STRAIN BEHAVIOR AND STRENGTH	257
	I Stress Strain Behavior	257
	A. Introduction	257
	B. Models	258
	C. Compression and Shear Versus Tensile Tests	260
	D. Effect of Temperature	262
	E. Rate of Testing and the Failure Envelope	265
	F. Effects of Hydrostatic Pressure	270
	G. Effect of Molecular Weight and Branching	271
	H. Effect of Crosslinking	275
	I. Effect of Crystallinity	280
	J. Effects of Plasticization and Copolymerization	283
	K. Molecular Orientation	285
	L. Polyblends, Block, and Graft Polymers	292
	II Brittle Fracture and Stress Concentrators	294
	A. Stress Concentrators	294
	B. Fracture Theory	296
	III Theories of Yielding and Cold-Drawing	299
	IV Impact Strength and Tearing	308
	A. Nature of Impact Tests	308
	B. Effect of Notches	309
	C. Effect of Temperature	313
	D. Effects of Orientation	314
	E. Other Factors Affecting Impact Strength	317
	F. Impact Strength of Polyblends	318
	G. Tearing	320
	V Summary	322
	VI Problems	323
	VII References	328
Chapter 6	OTHER MECHANICAL PROPERTIES	341
	I Heat Distortion Temperature	341
	II Fatigue	348
	III Friction	353
	IV Abrasion, Wear, and Scratch Resistance	359
	V Hardness and Indentation Tests	363
	VI Summary	369
	VII Problems	370
	VIII References	371
Chapter 7	PARTICULATE-FILLED POLYMERS	379
	I Introduction to Composite Systems	379
	II Rheology of Suspensions	380
	III Relation Between Viscosity and Shear Modulus	386
	IV Moduli of Filled Polymers	387
	A. Regular Systems	387
	B. Inverted Systems and Phase Inversion	394
	C. Errors in Composite Moduli	401
	D. Experimental Examples	405
	V Strength and Stress-Strain Behavior	405
	A. Rigid Fillers	405
	B. Polyblends, Block Polymers, and Foams	415

	VI	Creep and Stress Relaxation	418
	VII	Dynamic Mechanical Properties	422
	VIII	Other Mechanical Properties	430
		A. Impact Strength	430
		B. Heat Distortion Temperature	431
		C. Hardness and Wear	433
		D. Coefficients of Thermal Expansion	434
	IX	Summary	437
	X	Problems	438
	XI	References	442
Chapter 8		FIBER-FILLED COMPOSITES AND OTHER COMPOSITES	453
	I	Introduction	453
	II	Moduli of Fiber-Filled Composites	454
	III	Strength of Fiber-Filled Composites	465
		A. Uniaxially Oriented Fibers	465
		B. Strength of Randomly Oriented Fiber Composites and Laminates	474
	IV	Other Properties	479
		A. Creep	479
		B. Fatigue	480
		C. Heat Distortion Temperature	481
		D. Impact Strength	483
		E. Coefficients of Thermal Expansion	487
	V	Ribbon-Filled Composites	490
	VI	Other Types of Composites	496
		A. Flake-Filled Polymers	496
		B. Composites with Thick Interlayers	497
		C. Interpenetrating Network Composites	499
	VII	Summary	500
	VIII	Problems	501
	IX	References	503
		Author Index	537
		Subject Index	553
