Series preface	ix
Introduction	1
1. Glass fibres	15
1.1 Introduction	15
1.2 Requirements of melts for glass fibre production	16
1.3 Methods of glass fibre production	24
1.4 Formation of refractory and special glass fibres	34
1.5 Equipment and materials for glass melting	59
1.6 Feeder systems of direct plants	66
1.7 Production of woven materials	87
1.8 Looms used for manufacturing glass fabrics	103
1.9 Production of non-woven materials	109
1.10 Properties of glass fibres	117
1.11 Adhesion properties	138
1.12 Basic grades of glass fibres	159
1.13 Dispersive fillers : glass and ceramic microspheres	208
1.14 Secondary processing of waste	212
2. Carbon fibres	231
2.1 Types of carbon fibres	231
2.2 Production of carbon fibres	235
2.3 Carbon fibres based on polyacrylonitrile	248
2.4 Production of carbon fibres from rayon fibres	269
2.5 Carbon fibres based on isotropic pitches	281
2.6 Carbon fibres based on liquid crystalline pitches	295
2.7 Super-high-modulus super-high-strength carbon fibres	302
2.8 Surface treatment of carbon fibres	315
2.9 Application and economics of carbon fibres	324
3. Organic fibres as fillers of composite materials	359
3.1 Introduction	359
3.2 Stiff-chain polymer fibres	360
3.3 Fibres from thermotropic aromatic polyesters and other polymers	377
3.4 Thermoresistant polymer fibres	381
3.5 Flexible-chain polymer fibres	387
3.6 Conclusions	391
4. Inorganic filaments on a substrate : boron and silicon carbide fibres	397
4.1 Introduction	397
4.2 Structure , properties and strength characteristics	398
4.3 Nature of strength and ways to improve it	417
4.4 Physico-chemical basis of manufacture	434
4.5 Production	441
4.6 Some composite characteristics	444
5. Inorganic silicon carbide, Tyranno and silicon nitride fibres without substrate	457
5.1 Introduction	457
5.2 Fibre properties	458
5.3 Physico-chemical basis of manufacture	495
5.4 Production	528
5.5 Some characteristics of composite materials	531

6. Ceramic fibres	557
6.1 Alumina fibres	557
6.2 Fibres based on boron nitride	568
6.3 Basalt fibres and articles based on them	581
7. Methods of testing fibres and reinforced plastics	607
7.1 Theory of monofilament testing methods and prediction of plastic properties from test results	607
7.2 Theory of methods for determination of fibre properties from microplastic test results	616
7.3 Theoretical basis of methods for determination of fibre properties from plastic property test results	620
7.4 Experimental methods	635
7.5 Holographic and finite-element study of reinforcing components with a matrix	641
Index	673
