

CONTENTS

	Page
Preface	vii
Chapter 1. Types of Structural Schemes	1
1.1 Principles of Classification	1
1.2 Laminated Structures	2
1.3 Spatially Reinforced Structures	9
1.4 Ultimate Reinforcement Coefficients of Spatial Structures	22
Chapter 2. Methods for Determination of Mechanical Properties	33
2.1 Introductory Remarks	33
2.2 Tension	34
2.3 Compression	45
2.4 Bending of Flat Specimens	50
2.5 Shear	59
Chapter 3. Spatially Reinforced Media	69
3.1 The Lamina	69
3.2 Calculation of Elastic Characteristics of Lamina	78
3.3 Principle of Laminae Stacking	97
3.4 Four-Dimensional composites	114
3.5 On the Methods of Stiffness Averaging in Multi-Directional Composites	127
3.6 The Effect of Multi-Directionality of Fibers on Deformability of Spatially Reinforced Composites	129
Chapter 4. Composites Reinforced by the System of Two Threads	139
4.1 Calculation of Elastic Constants	139
4.2 The Effect of Structural Parameters	144
4.3 Stiffness in Uniaxial Loading	149
4.4 Strength under Uniaxial Loading	168
4.5 Fiber Tensioning	181
Chapter 5. Composites Reinforced by the System of Three Threads	183
5.1 Calculation Models	183
5.2 Model Taking into Account Density of Arrangement of Fibers	193
5.3 Analysis of Models	212
5.4 Mechanical Properties	224
5.5 Effect of Polymeric Matrix on the Formation of Mechanical Properties	238
5.6 Effect of Structural Factors on Mechanical Properties	244
5.7 Evaluation of Efficiency of Reinforcement in the Third Direction	249
Chapter 6. Carbon-Carbon Composites	253
6.1 Methods of Manufacture	253
6.2 Properties of Composites 3 D and Mod 3	261
6.3 The Effect of Thermal Processing on Formation of Properties	273
6.4 Specific Properties of Carbon-Carbon Composites	279
6.5 Character of Fracture	302
Chapter 7. Composites Reinforced by Whiskerized Fibers	305
7.1 Principles of Composites Fabrication	305
7.2 Determination of Elastic Characteristics	309
7.3 Properties	313
7.4 Consideration of Fiber Whiskerization Degree	322
7.5 Character of Fracture	327
