<i>Preface</i>	vii
<i>Preface to the second edition</i>	ix
1. Introduction	1
1.1 Models of Disordered Matter: A Brief Overview . . . . .	1
1.2 General Concepts on the Statistical Mechanics of Disordered Matter . . . . .	13
1.2.1 Lattice Models . . . . .	13
1.2.2 Averaging in Random Systems: Quenched versus Annealed Disorder . . . . .	17
1.2.3 "Symmetry Breaking" and "Ergodicity Breaking" . .	20
1.2.4 Configurational Entropy versus "Complexity", and the Kauzmann Paradox . . . . .	25
2. Structure and Dynamics of Disordered Matter	35
2.1 Pair Distribution Functions and the Static Structure Factor	35
2.2 Topological Disorder and Bond Orientational Correlations	51
2.3 General Aspects of Dynamic Correlation Functions and Transport Properties . . . . .	64
3. Models of Disordered Structures	81
3.1 Random Walks: A Simple Model for the Configurations of Flexible Polymers . . . . .	81
3.2 Percolation: A First Example of a Fractal Structure . . . .	96

3.2.1	The Percolation Probability and Percolation Threshold . . . . .	96
3.2.2	Diluted Magnets and Critical Exponents . . . . .	100
3.2.3	The Fractal Dimensionality and the Concept of Finite Size Scaling . . . . .	106
3.2.4	Scaling of the Cluster Size Distribution . . . . .	108
3.2.5	Percolation for Low and High Lattice Dimensions . . . . .	111
3.2.6	Rigidity Percolation . . . . .	115
3.3	Other Fractals (Diffusion-Limited Aggregation, Random Surfaces, etc.) . . . . .	118
3.3.1	General Concepts on Fractal Geometry . . . . .	118
3.3.2	Diffusion-Limited Aggregation . . . . .	122
3.3.3	Growth of Random Interfaces . . . . .	124
3.4	Random Close Packing . . . . .	126
3.5	Continuous Random Networks . . . . .	135
3.6	Chemically Realistic Models of Structural Glasses . . . . .	142
3.7	Liquid and Solid Foams: Random Cellular Structures . . . . .	159
4.	General Concepts and Physical Properties of Disordered Matter	173
4.1	The Rouse Model for Polymer Dynamics: A Simple Example for the Consequences of the Random Walk Picture . . . . .	173
4.2	Application of the Percolation Problem to Physical Systems	186
4.2.1	Percolation Conductivity and a Naive Treatment of the Elasticity of Polymer Networks . . . . .	186
4.2.2	Excitations of Diluted Magnets Near the Percolation Threshold . . . . .	191
4.2.3	Effective Medium Theory . . . . .	196
4.3	Elementary Excitations of Fractal Structures . . . . .	198
4.3.1	Diffusion on a Percolation Cluster: The “Ant in the Labyrinth” . . . . .	198
4.3.2	The Spectral Dimension and Fracton Excitations . . . . .	201
4.3.3	The Sol-Gel Transition Revisited . . . . .	206
4.4	Physical Properties of Amorphous Solids . . . . .	211
4.4.1	Two-Level Systems . . . . .	212
4.4.2	Anomalies of Glasses at Intermediate Temperatures: Excess Specific Heat, Thermal Conductivity Plateau, and Boson Peak . . . . .	218
4.5	Spin Glasses . . . . .	230

4.5.1	Some Experimental Facts about Spin Glasses: Systems and Physical Properties . . . . .	231
4.5.2	Theoretical Models . . . . .	241
4.5.3	The Replica Method and the Mean Field Theory of the Ising Spin Glass . . . . .	246
4.5.4	Replica Symmetry Breaking . . . . .	254
4.5.5	Spin Glasses Beyond Mean Field Theory . . . . .	265
4.6	Variants and Extensions of Spin Glasses . . . . .	276
4.6.1	$p$ -Spin Interaction Spin Glasses and the Random Energy Model . . . . .	277
4.6.2	Potts Glasses . . . . .	279
4.6.3	Quadrupolar Glasses as Models for Diluted Molecular Crystals . . . . .	291
4.6.4	Atomistically Realistic Models of Diluted Molecular Crystals . . . . .	297
4.6.5	Spin Models with Quenched Random Fields . . . . .	301
4.6.6	From Spin Glasses to Computer Science and Information: An Outlook to the Random Satisfiability Problem . . . . .	317
5.	Supercooled Liquids and the Glass Transition	339
5.1	Phenomenology of Glass-Forming Systems . . . . .	340
5.2	The Mode Coupling Theory of the Glass Transition . . . . .	360
5.2.1	The Zwanzig-Mori Projection Operator Formalism . . . . .	361
5.2.2	The Mode Coupling Approximations . . . . .	366
5.2.3	The Mode Coupling Theory of the Glass Transition . . . . .	368
5.2.4	Predictions of Mode Coupling Theory . . . . .	376
5.2.5	The Relaxation Dynamics of Glass-Forming Liquids and Test of the Predictions of MCT . . . . .	387
5.2.6	Some General Remarks on Mode Coupling Theory . . . . .	414
6.	Further Models for Glassy Dynamics; Dynamical Heterogeneities; Gels; Driven Systems	433
6.1	Models for Slow Relaxation . . . . .	433
6.1.1	The Theory of Adam and Gibbs . . . . .	434
6.1.2	The Free Volume Theory . . . . .	439
6.1.3	Kinetically Constrained Models . . . . .	448
6.2	Dynamical Heterogeneities and Growing Length Scales . . . . .	463

6.3	Gels versus Glasses . . . . .	493
6.4	Driven Systems . . . . .	506
6.4.1	Glasses under Shear . . . . .	506
6.4.2	Aging Dynamics of Glassy Systems . . . . .	513
6.5	Concluding Remarks . . . . .	516
