

CONTENTS

Acknowledgements	13
Foreword	15
Introduction	19
Surface engineering –a conspectus	21
Section 1.1 PVD Processes	
1.1.1 Keynote	33
1.1.2 Hard coatings on aluminium alloys by PVD	45
1.1.3 The wear behaviour of CVD-and PVD-coated tools in metal stamping and plastics injection-Moulding	60
Section 1.2 Ion implantation	
1.2.1 The application of ion implantation to problems of corrosion and wear	73
1.2.2 Effects of boron ion implantation on mechanical properties of engineering ceramics and-Cermest	81
1.2.3 The effects of deposition parameters on the microstructures of ion-plated niobium coatings	89
1.2.4 A new process for boronizing metals	102
Section 1.3 Spray coating processes	
1.3. 1 Keynote	117
1.3.2 Effect of discontinuous spray deposition on the wear of VPS alumina coatings on steel and –Tungsten	136
1.3.3 Developments in arc cladding techniques	151
Section 1.4 Laser processing	
1.4.1 The influence of convection on the homogeneity of laser applied coatings	159
1.4.2 A new structure of laser melted Cr12 tool steel	168
1.4.3 Laser treatment of plasma-sprayed coating	177
1.4.4 Corrosion resistant fused oxide coatings by laser processing	183
1.4.5 The structure and sliding-contact wear resistance of a laser-hardened austempered-Ductile iron	192
Part 2: Fundamental Aspects of Surface Coatings – Science and Technology	
Section 2.1 ceramic coatings	
2.1.1 Keynote	207
2.1.2 Ti and TiN coatings on 316L surgical steel	233
2.1.3 Influence of titanium dioxide on the durability of industrial coatings	242
2.1.4 Thermal barrier coatings for gas turbines	258
Section 2.2 Inorganic and conversion coatings	
2.2.1 Keynote	273

2.2.2 On the design of coatings materials to resist high temperature chloridation	282
2.2.3 On the creation of a coatings and high temperature corrosion data bank	301
2.2.4 Keynote	306
2.2.5 Reflectivity changes as a means of monitoring the performance of coated steels at elevated – Temperatures	315
2.2.6 Molybdate-orthophosphoric acid conversion coating solutions for tinplate surfaces	328
Section 2.3 Organic coatings	
2.3.1 Keynote	339
2.3.2 Weathering of coatings-formulation and evaluation	345
2.3.3 Recent developments in accelerated weathering of coatings using plasma erosion	356
2.3.4 The characterization of polymer/metal interfacial layers	366
2.3.5 Some electrically conducting organic coatings and their applications	377
2.3.6 Thin films of CdTe produced using the coevaporation of CdTe with Te	387
Part 3: Engineering Applications of Coatings	
Section 3.1 Overview	
3.1.1 Applications and performance of coatings: some perspectives and prospects	397
Section 3.2 The inhibition of high temperature corrosion	
3.2.1 Study of the effect of nitride coatings on the corrosion resistance of some conventional – Stainless steel and NiCrMo-type alloys	423
3.2.2 Composition optimization of coatings materials to inhibit breakaway corrosion in complex- Gas atmospheres at elevated temperatures	439
3.2.3 The resistance of aluminized iron-nickel-chromium-base alloys to gaseous environments- Of high sulphur and low oxygen potentials at high temperature	454
3.2.4 Environmental embrittlement of superalloys during coating processes	466
3.2.5 The oxidation of a case borided 9Cr1Mo steel in high temperature steam	475
3.2.6 Observations on the use of the spark discharge melting process to improve the high- Temperature oxidation resistance of a 3Cr 8W 0.5V tool steel	488
3.2.7 The problems of internal oxidation and its elimination in gaseous carbonitriding	492
Section 3.3 Corrosion performance	
3.3.1 Effect of alloying elements on the anodic polarization behaviour of zinc in NaCl solutions – Containing NO ₂ ⁻ , CrO ₄ ²⁻ and HPO ₄ ²⁻ ions	499
3.3.2 The passivation of forging brass in an acidic solution based on Cr ⁺⁶ Compounds and – Selective dissolution of B' phase	512
3.3.3 Passivation and corrosion behaviour of some electrodeposited tin-cobalt alloy coatings	522
3.3.4 Comparative corrosion resistance of galvanized and galvanized steel	543
3.3.5 Fretting corrosion behaviour of Galfan coated steel wire in synthetic seawater	553
3.3.6 Development of aluminium-alloy coatings for the protection of steel	566
3.3.7 Effect of nitriding conditions on corrosion resistance of Cr17Ni2 steel in sulphate and- Chloride solutions	578
3.3.8 Electrochemical behaviour of TiN and TiC CVD coatings on steels	587

3.3.9 Properties of chromium coatings plated from flowing sulphate-potassium silicon fluoride – Electrolyte with the addition of Na_2MoO_4	610
---	-----

Section 3.4 Wear and mechanical behaviour

3.4.1 A sustained eposition process for nickel-chromium and nickel-chromiumiron coatings for- Corrosion and wear resistance	619
3.4.2 Improving wear resistance by spark discharge cladding	634
3.4.3 Corrosion and mechanical properties of electroless nickel-high boron coatings	642
3.4.4 Stress corrosion, fretting and fatigue control by surface pre-stressing	663
3.4.5 Hard chromium plating to improve the cavitation erosion and abrasion resistance of – Stainless steels	676
3.4.6 Antifriction self-lubricating coatings on the base of fixed metals complexes	686
