Introduction .....	xxxiii
<i>Rajiv Kohli and Kash Mittal</i>	
<b>PART I FUNDAMENTALS.....</b>	<b>1</b>
<b>1 The Physical Nature of Very, Very Small Particles and its Impact on Their Behavior .....</b>	<b>3</b>
<i>Othmar Preining</i>	
1.1 Introduction .....	3
1.2 The Spectrum of Aerosol Particle Sizes .....	3
1.3 Atoms and Molecules—Concepts and Dimensions .....	5
1.4 The Model of a Gas .....	8
1.5 Particles and Gas Molecules .....	10
1.6 Particle Interactions .....	15
1.6.1 Coagulation .....	15
1.6.2 Homogeneous nucleation .....	15
1.6.3 Adsorption .....	17
1.7 Nanoparticles as Molecular Clusters .....	18
1.8 An Interaction Model for Nanometer-Sized Particles .....	19
1.9 Concluding Remarks .....	21
Acknowledgements.....	23
References .....	23
<b>2 Elucidating the Fundamental Interactions of Very Small Particles: Ultrafast Science .....</b>	<b>25</b>
<i>Carlo Altucci and Domenico Paparo</i>	
2.1 Introduction .....	25
2.2 Techniques for the Generation of Ultrashort Pulses.....	27
2.2.1 Basic concepts: mode locking and early generations of ultrashort laser sources .....	27
2.2.2 Sub-100-fs pulses and chirped pulse amplification .....	31
2.2.3 The few-optical-cycle regime .....	39

2.2.4	The carrier-envelope-phase (CEP) . . . . .	48
2.2.5	Techniques for ultrashort pulse measurements . . . . .	54
2.3	Dynamics of Atoms and Molecules in Strong Fields . . . . .	67
2.3.1	Atoms . . . . .	67
2.3.1.1	Perturbative regime . . . . .	69
2.3.1.2	The strong field regime . . . . .	71
2.3.1.3	High-order harmonic generation . . . . .	75
2.3.2	Attosecond pulse generation and characterization: the present border line of ultrafast science . . . . .	85
2.3.3	Molecules . . . . .	100
2.3.3.1	The birth of femtochemistry: probing the transition states . . . . .	101
2.3.3.2	Some basic theoretical concepts on wave-packet formation and dynamics . . . . .	106
2.3.3.3	Diatom molecule and laser- molecule interaction . . . . .	108
2.3.4	Simple properties of a wave-packet . . . . .	110
2.3.4.1	Wavepacket generation and influence of chirping . . . . .	111
2.4	Bond-breaking in Single Molecules . . . . .	115
2.5	Controlling Molecular Populations and Chemical Reactions by Ultrafast Pulses . . . . .	120
2.6	Polyatomic Molecules and Nonadiabatic Processes . . . . .	128
2.7	Recent Results in Ultrafast Crystallography: UED and Time-resolved X-rays . . . . .	137
2.8	New Nonlinear Optical Techniques for Probing Surfaces: Surface Second-harmonic and Sum-frequency Generation . . . . .	142
2.8.1	Theoretical considerations . . . . .	145
2.8.2	Local-field-induced enhancement of SSHG on metal surfaces . . . . .	150
2.8.3	Metal nanoparticles . . . . .	151
2.8.4	Femtochemistry of surfaces probed by pump-probe SSFG and SSHG . . . . .	157
2.9	Summary . . . . .	162
	References . . . . .	163

<b>3 Transport and Deposition of Aerosol Particles . . . . .</b>	<b>189</b>
<i>Daniel J. Rader and Anthony S. Geller</i>	
3.1 Introduction . . . . .	189
3.2 Noncontinuum Considerations . . . . .	190
3.3 Lagrangian Particle Equation of Motion . . . . .	191
3.3.1 Fluid-particle drag force . . . . .	192
3.3.1.1 Fluid-drag force: assumptions and practical considerations . . . . .	194
3.3.2 Gravitational force . . . . .	197
3.3.3 Thermophoretic force . . . . .	197
3.3.3.1 Continuum regime limit . . . . .	198
3.3.3.2 Free molecule regime limit . . . . .	198
3.3.4 Electrostatic force . . . . .	198
3.4 Inertial Effects . . . . .	199
3.4.1 Nondimensionalization . . . . .	199
3.5 Drift Velocity . . . . .	201
3.5.1 Gravitational drift velocity . . . . .	202
3.5.2 Thermophoretic drift velocity . . . . .	203
3.5.3 Electric drift velocity . . . . .	205
3.6 Eulerian Formulation . . . . .	205
3.6.1 Particle diffusion coefficient . . . . .	206
3.6.2 Nondimensional formulation . . . . .	208
3.7 Particle Transport and Deposition in a Parallel Plate Reactor . . . . .	209
3.7.1 Fluid transport equations . . . . .	211
3.7.1.1 Flow field in the showerhead holes . . . . .	212
3.7.1.2 Fluid transport between parallel plates . . . . .	213
3.7.1.3 Summary: fluid flow analysis for the parallel plate geometry . . . . .	216
3.7.2 Particle collection efficiency . . . . .	217
3.7.3 Particles entering through the showerhead . . . . .	218
3.7.3.1 External force limit . . . . .	219
3.7.4 Particle traps/in situ nucleation . . . . .	220
3.7.4.1 Efficiency for the Lagrangian formulation . . . . .	222
3.7.4.2 Efficiency for the Eulerian formulation . . . . .	222
3.7.4.3 External force limit . . . . .	223

3.7.5	Diffusion-enhanced deposition from traps or in situ nucleation . . . . .	224
3.7.5.1	Problem definition . . . . .	225
3.7.5.2	Solution of the Eulerian particle transport equation . . . . .	226
3.7.5.3	Particle collection efficiency . . . . .	229
3.7.5.4	Particle flux . . . . .	229
3.7.6	Nondimensional results . . . . .	230
3.7.6.1	Efficiency at intermediate Peclet numbers . . . . .	230
3.7.7	Dimensional results . . . . .	233
3.7.7.1	Trap height effects . . . . .	234
3.7.7.2	Pressure effects . . . . .	235
3.7.7.3	Mass flow rate effects . . . . .	237
3.7.7.4	Effect of thermophoresis . . . . .	238
3.7.8	Summary: diffusion-enhanced deposition . . . . .	239
3.8	Inertia-Enhanced Deposition . . . . .	242
3.8.1	Particle transport in the showerhead holes . . . . .	242
3.8.2	Particle transport between parallel plates . . . . .	245
3.8.2.1	Asymptotic limit of critical Stokes number . . . . .	247
3.8.3	Coupled transport—nondimensional results . . . . .	249
3.8.3.1	Critical Stokes numbers . . . . .	250
3.8.3.2	Grand design curves . . . . .	252
3.8.3.3	External forces . . . . .	254
3.8.3.4	Parabolic profile . . . . .	255
3.8.4	Coupled transport—dimensional results . . . . .	258
3.9	Chapter Summary and Practical Guidelines . . . . .	261
	References . . . . .	264
<b>4</b>	<b>Relevance of Particle Transport in Surface Deposition and Cleaning . . . . .</b>	<b>267</b>
<i>Chao-Hsin Lin and Chao Zhu</i>		
4.1	Introduction . . . . .	267
4.2	Particle–solid Surface Interactions . . . . .	268
4.3	Dry Deposition . . . . .	273
4.4	Thermophoresis and Its Relevance in Surface Cleaning .	280
4.5	Electrostatic Force and Its Relevance in Surface Cleaning	285
4.6	Dielectrophoresis and Its Relevance in Surface Cleaning	286

4.7 Abrasive Erosion and Its Relevance in Surface Cleaning	288
4.8 Summary . . . . .	292
References . . . . .	294
<b>5 Tribological Implication of Particles . . . . .</b>	<b>299</b>
<i>Koji Kato</i>	
5.1 Introduction . . . . .	299
5.2 The Micro-Site for Generation of Wear Particles . . . . .	299
5.3 Wear Modes and Particles . . . . .	302
5.3.1 Adhesive transfer of atoms in contact and separation . . . . .	302
5.3.2 Adhesive transfer of flake-like particles in sliding contact . . . . .	303
5.3.3 Micro-cutting and generation of fine feather-like particles in abrasive sliding . . . . .	305
5.3.4 Surface plastic flow and a thin filmy wear particle generation by repeated contacts . . . . .	307
5.3.5 Crack initiation and propagation in the subsurface of contact and generation of a flake-like particle by repeated contact . . . . .	309
5.3.6 Tribo-oxidation and generation of particles of oxides by repeated contacts in air and water . . . . .	311
5.3.7 Wear particles generated in sliding of steels in oil with additives . . . . .	312
5.4 Wear Rate and Number of Generated Wear Particles . . . . .	315
5.5 The Size Distribution of Wear Particles . . . . .	318
5.6 Concluding Remarks . . . . .	322
5.6.1 Solid wear particles . . . . .	322
5.6.2 Gas molecules by wear . . . . .	323
5.6.3 Triboemission of electrons, ions, photons, and particles . . . . .	323
Acknowledgement . . . . .	325
References . . . . .	325
<b>6 Airborne Molecular Contamination: Contamination on Substrates and the Environment in Semiconductors and Other Industries . . . . .</b>	<b>329</b>
<i>Taketoshi Fujimoto, Kikuo Takeda and Tatsuo Nonaka</i>	

6.1	Introduction . . . . .	329
6.1.1	Background . . . . .	330
6.1.2	Changes in semiconductor integration . . . . .	332
6.1.3	Changes in target contaminant . . . . .	332
6.2	Definitions, Types and Sources of AMCs . . . . .	333
6.2.1	Definition of “Airborne Molecular Contamination” . . . . .	333
6.2.2	Examples of AMC-induced problems in the manufacturing process . . . . .	336
6.2.3	Nature of AMC-induced effects . . . . .	337
6.2.4	Classification of airborne molecular contaminants . . . . .	339
6.2.4.1	SEMATECH technology transfer report No. 95052812A-TR . . . . .	343
6.2.4.2	International technology roadmap for semiconductor (ITRS) 1999 . . . . .	343
6.3	Analysis Methods . . . . .	344
6.3.1	Substrate surface analysis . . . . .	345
6.3.1.1	Quantitative analysis . . . . .	345
6.3.1.2	Surface (instrumental) analysis . . . . .	350
6.3.2	Air analysis . . . . .	352
6.3.2.1	Acids . . . . .	352
6.3.2.2	Bases: ammonia ( $\text{NH}_3$ ) and amines . . . . .	353
6.3.2.3	Condensables: organic compounds . . . . .	354
6.3.2.4	Dopants: boron, phosphorus, and metals . . . . .	365
6.3.3	Outgassing evaluation method for construction materials . . . . .	367
6.3.3.1	IEST WG 031 . . . . .	370
6.3.3.2	JACA No. 34-1999 . . . . .	376
6.4	Nature of Airborne Molecular Contamination and Its Effects . . . . .	382
6.4.1	Investigation of the properties of AMCs . . . . .	382
6.4.1.1	Effects of rinsing the outdoor air . . . . .	382
6.4.1.2	Acids . . . . .	384
6.4.1.3	Bases . . . . .	384
6.4.1.4	Condensables: siloxanes, phthalates, phosphates and other organic compounds . . . . .	386

6.4.2 Examples of problems caused by AMC contamination . . . . .	401
6.4.2.1 General. . . . .	402
6.4.2.2 Effects of ammonia . . . . .	402
6.4.2.3 Effects of siloxanes . . . . .	403
6.4.2.4 Effects of HMDS . . . . .	403
6.4.3 Chemistry of AMCs . . . . .	403
6.4.3.1 Monolayer and sub-monolayer contamination . . . . .	403
6.4.3.2 Clausius–Clapeyron relation . . . . .	408
6.4.3.3 Outgassing phenomenon: two-phase exponential model of vaporization and diffusion of contaminants . . . . .	411
6.4.3.4 Sticking probability, sticking coefficient, and staying tendency . . . . .	414
6.4.3.5 Investigation of contamination based on the “Organic Conceptual Diagram” . . . . .	426
6.5 Examples of Application of Knowledge and Technology . . . . .	432
6.5.1 Excursion of AMCs . . . . .	432
6.5.1.1 Data analysis . . . . .	432
6.5.1.2 Investigation of contaminant sources in cleanroom . . . . .	432
6.5.2 Selection of construction materials with fewer AMC contaminant sources . . . . .	435
6.5.3 Chemical filter for air cleaning . . . . .	436
6.5.3.1 Change of total organic concentration with time . . . . .	436
6.5.3.2 Change of siloxanes concentration in cleanroom air . . . . .	437
6.5.3.3 Effect of chemical filter . . . . .	439
6.5.3.4 Published reports on removal mechanisms. . . . .	439
6.5.3.5 Other issues. . . . .	441
6.5.4 Removal from the substrate surface (carbon chemistry) . . . . .	441
6.5.4.1 Cleaning technology using UV photoelectron with catalyst. . . . .	441

6.5.4.2 Other cleaning technology . . . . .	443
6.5.5 Monitoring systems . . . . .	443
6.5.6 Recent developments . . . . .	444
6.5.6.1 Cleanliness requirements for Si wafer . . . . .	444
6.5.6.2 Trends in standardization . . . . .	445
6.5.6.3 New analytical techniques . . . . .	448
6.5.6.4 Achieving cleanroom cleanliness at low AMCs level (DOP 0.1 ng/m <sup>3</sup> ) . . . . .	448
6.6 Future Directions . . . . .	449
6.6.1 Technology for cleanliness of AMCs . . . . .	449
6.6.2 Advances in analytical methods . . . . .	449
6.6.3 Application of air cleanliness technology to various fields . . . . .	452
6.6.3.1 Sick house syndrome . . . . .	452
6.6.3.2 Endocrine disrupters . . . . .	452
6.6.3.3 Cleanliness of experiment and analysis environments . . . . .	452
6.6.3.4 Other applications . . . . .	454
6.6.4 Contribution of the analyst/chemist to troubleshooting . . . . .	454
6.7 Summary of the Chapter . . . . .	455
