Preface	v
About the Editor	xv
List of Contributors	xvii
Contents of Volumes in This Set	xxi

CHAPTER 1. Biomaterialized Inorganic Nanomaterials

Shu-Hong Yu

1. Introduction	1
2. Artificial Engineering of Inorganic Biomaterials	2
2.1. Small-Molecule Additive-Mediated Shape Control	2
2.2. Surfactant-Mediated Templating and Crystallization	11
2.3. Supramolecular Self-assembly from Artificial Organic Templates	20
2.4. Polymer-Controlled Crystallization and Morphosynthesis	23
3. Natural Organization of Inorganic Nanobuilding Blocks	49
3.1. Organism-Templated Biomaterials	49
3.2. Oriented Attachment Growth and Spontaneous Organization	55
4. Conclusions and Outlook	62
References	63

CHAPTER 2. Nanostructure and Dynamics of Biocompatible Surfactant Monolayers and Bilayers

Heidi E. Warriner, An Thien Ngo, Joseph A. Zasadzinski, Junqi Ding

1. Introduction	72
1.1. A Short History	72
1.2. Contemporary Topics and Questions	74
2. Methods	76
2.1. Isotherms	76
2.2. Epi-fluorescence Microscopy	79
2.3. Brewster Angle Microscopy	84
2.4. Atomic Force Microscopy	97
2.5. Surface Shear Rheometry	105
3. Nanoscale Studies of Lung Surfactant	111
3.1. Clinical Background	111
3.2. Functional Requirements	112
3.3. Lung Surfactant Compositions	112
3.4. Composition, Phase Behavior and Monolayer Structure	113
3.5. Structure and Transport	117
4. Conclusions	122
References	122

CHAPTER 3. Biointerface, Bioconjugation, and Biomatrix Based on Bioinspired Phospholipid Polymers

Junji Watanabe, Kazuhiko Ishihara

1. Introduction	129
2. Interfacial Properties on Bioinspired Phospholipid Polymers	131
2.1. Monolayer Membrane Formation	131
2.2. Coating with Phospholipid Polymers	134
2.3. Surface Grafting with Phospholipid Polymers	138
2.4. Hybridization of Phospholipid Polymers by Sol–Gel Reaction	142
3. Solution Properties for Bioconjugation	144
3.1. Solution Properties of Bioinspired Phospholipid Polymers	144
3.2. Bioconjugation	147
3.3. Nanospheres	150
4. Bulk Properties for Biomedical Applications	151
4.1. Polymer Alloy	151
4.2. Hydrogels	158
4.3. Polymer Complex	161
5. Conclusions	164
References	164

CHAPTER 4. Novel Nanostructured Surface Roughness for the Control of Protein and Cell Functions

Thomas J. Webster

1. Introduction	167
2. Proteins	168
2.1. Protein Structure	168
2.2. Protein Interactions to Surfaces	177
2.3. Material Properties That Influence Protein Interactions	180
3. Promise of Nanophase Materials for Enhancing Protein Interactions	180
3.1. Rationale	181
3.2. Experimental Evidence	181
4. Promise of Nanophase Materials for Enhancing Cell Interactions	183
4.1. Rationale	184
4.2. Experimental Evidence	186
5. Future Activity	199
6. Conclusions	200
References	200

CHAPTER 5. Functional Imaging of the Hierarchical Structure/Property Relationships in Bone, Dentin, and the Adhesive/Dentin Interface

J. Lawrence Katz, Yong Wang, Paulette Spencer, Anil Misra, Sauwanan Bumrerraj, Tsutomu Nomura, Steven J. Eppell, Massood Tabib-Azar

1. Introduction	206
2. Experimental/Computational Techniques	207
2.1. Scanning Acoustic Microscopy	207
2.2. Nanoindentation	210

2.3. Micro-Raman Spectroscopy	211
2.4. FTIR Chemical Imaging	212
2.5. Scanning Evanescent Microwave Probe	212
2.6. Finite Element Modeling	215
2.7. Ultrasonic Wave Propagation	215
3. Structural Characteristics of Selected Calcified Tissues	217
3.1. Bone	217
3.2. Dentin	218
3.3. Dentin–Enamel Junction	221
4. Property Measurement of Selected Calcified Tissues	223
4.1. Mechanical Analysis with Ultrasonic Wave Propagation Techniques	223
4.2. Micromechanical Analysis with Scanning Acoustic Microscopy	224
5. Synthetic Material/Calcified Tissue Interfaces	225
5.1. Adhesive/Dentin Interface	225
5.2. Properties of the Components at the Adhesive/Dentin Interface	230
5.3. Finite Element Modeling of the Adhesive/Dentin Interface	232
5.4. Properties of the Bone/Implant Interface	233
6. Discussion	234
6.1. Modeling of Compact Bone as a Composite Material	234
6.2. Modeling of Other Calcified Tissues and Interfaces as Hierarchical Structures	235
References	235

CHAPTER 6. Glycolipid-Based Bionanomaterials

Dai Kitamoto, Kazunori Toma, Masakatsu Hato

1. Introduction	239
2. General Properties of Glycolipids	241
2.1. Biological and Biochemical Aspects	241
2.2. Physicochemical Aspects	245
3. Self-Assembled Nanostructures of Glycolipids	251
3.1. Two-Dimensional Nanostructures	251
3.2. Three-Dimensional Structures	257
4. Summary and Future Perspectives	267
References	268

CHAPTER 7. Optical Properties and Wettability of Nanostructured Biomaterials: Moth Eyes, Lotus Leaves, and Insect Wings

G. Palasantzas, J. Th. M. De Hosson, K. F. L. Michielsen, D. G. Stavenga

1. Introduction	274
2. Antireflective Nanostructured Surfaces	275
2.1. Antireflective Moth Wing	275
2.2. Antireflection Theory	276
2.3. Antireflective Moth Eye	277
2.4. Replication and Application of Antireflective Nanostructures	279
3. Complex Nanostructured Surfaces: Photonic Materials	280
3.1. General Aspects of Photonic Bandgap Materials	280
3.2. Theoretical Predictions and Calculations	282
3.3. Nanostructured Butterfly Wing Scales	287

4. The Lotus Effect	293
4.1. Introduction to the Lotus Effect	293
4.2. Physical Background of the Lotus Effect: Wetting on Rough Surfaces	293
4.3. Applications of the Lotus Effect	297
5. Summary	298
References	298

CHAPTER 8. Interactions between Cells and Synthetic Nanofiber Extracellular Matrix

Thomas Yong, Xu Chengyu, Seeram Ramakrishna

1. Introduction	304
2. Native Extracellular Matrix: Component and Structure	305
2.1. Collagen and Elastin	305
2.2. Proteoglycans	306
2.3. Fibronectin, Laminin, and Other Proteins of the Extracellular Matrix Proteins	307
2.4. 3-D Organization of Native Extracellular Matrix	308
2.5. Nanoscale Structure of Native Extracellular Matrix	308
3. Cell-Native Extracellular Matrix Interactions	309
3.1. Cell Binding to the Extracellular Matrix	310
3.2. Cell-Extracellular Matrix Interaction Influences Extracellular Matrix Remodeling	312
3.3. Cell-Extracellular Matrix Interaction Controls Cell Behavior	313
4. Synthetic Extracellular Matrix	313
4.1. Biodegradable Synthetic Polymers	315
4.2. Synthetic Nanofiber Extracellular Matrix	316
5. Cell-Synthetic Extracellular Matrix Interaction	319
5.1. Cell Morphology	320
5.2. Gene Expression	321
5.3. Cell Signaling	322
5.4. Heparan Sulfate-like Glycosaminoglycans (HSGAGs)	323
6. Surface Parameters Influencing Cell-Extracellular Matrix Interaction	324
6.1. Surface Morphology and Topography	324
6.2. Surface Roughness	324
6.3. Surface Chemistry	325
6.4. Surface Energy	325
7. Conclusion	326
References	326

CHAPTER 9. Biomaterials in Mesoporous Media: From Open Space to Confined Space

Katsuhiko Ariga, Kazi Zakir Hossain, Ajayan Vinu, Martin Hartmann

1. Introduction	332
2. Immobilization of Biomaterials on Nanostructures in Open Space	333
2.1. Lipid Films and Polyelectrolyte Films	333
2.2. Hybridization with Silica-Related Materials	337
3. Basics of Mesoporous Materials and Entrapment of Small Biomolecules	340
3.1. Outline of Mesoporous Silica and Related Materials	340
3.2. Entrapment of Small Biomolecules and Controlled Release	343
3.3. Hybrid with Supramolecular Components	344

4. Immobilization of Proteins on Mesoporous Media	345
4.1. Adsorption Behavior	345
4.2. Enzymatic Activity	349
5. Construction of Protein Mimics Using Mesoporous Silica	350
5.1. Proteosilica	350
5.2. Lizard Templating	350
6. Perspective	355
Glossary	355
References	355

CHAPTER 10. Interactions of Cells with Biomaterial Nanostructured Surfaces

Wei-Bor Tsai, Chi-An Dai

1. Introduction	359
2. Cells and the Surrounding Nanoworld	360
2.1. The Extracellular Matrix	361
2.2. Cell and ECM Interactions	361
2.3. Nanoscale Topography of the ECM	362
2.4. The Intersection of Biotechnology and Nanotechnology	363
3. Nanostructured Materials for Bone Implants	364
4. Nanoscale Materials Used in Tissue Engineering	366
5. Surface Nanotopography	368
5.1. Random Roughness	368
5.2. Cell Interactions with Nanopatterned Surfaces	370
6. Nanopatterned Chemical Cues on Surfaces	376
6.1. Technologies for the Fabrication of Surfaces with Nanopatterned Chemistry	378
7. Surface Topography vs. Surface Chemistry	380
8. Conclusion	380
References	381

CHAPTER 11. Nanostructure in Natural Bone and Its Mimetic Fabrication

Fuzhai Cui, Wei Zhang, In-seop Lee

1. Introduction	386
2. Nanostructure of Natural Bone	386
2.1. Research History of Nanostructure of Natural Bone	386
2.2. Crystal Size and Shape in Natural Bone	387
2.3. Organization of Nanocrystals in Natural Bone	389
2.4. Relationship between Nanostructure and Mechanical Properties of Natural Bone	392
2.5. Structural Difference between Normal and Abnormal Bone	393
3. Biomimetic Fabrication of Bone Substitution Materials and Their Biocompatibility	396
3.1. Growing Need for Artificial Bone Tissue Replacement Implants	396
3.2. Biomimetic Bone Tissue Engineering Materials Research	397
3.3. Clinically Available Tissue Engineering Options and Specifications	405
4. Summary and Outlook	405
References	405

CHAPTER 12. Biocompatibility of Materials

Davidson D. Ateh, Pankaj Vadgama, Harshad A. Navsaria

1. Introduction	412
2. Materials	413
2.1. Basic Features	413
2.2. Mechanical Properties	414
2.3. Further Bulk Properties	415
2.4. Surface Properties	416
2.5. Nanostructured Materials	419
3. Biological Tissues	420
3.1. Epithelial Cells of the Skin (Keratinocytes)	420
3.2. Keratinocyte Proliferation	420
3.3. Regulation of Cell Proliferation	421
3.4. Basement Membrane and Extracellular Matrix Proteins	421
3.5. Integrins and Cadherins	422
3.6. Growth Factors Secreted by Keratinocytes	424
3.7. Epithelial–Mesenchymal Interactions in Wound Healing	424
4. Tissue–Nanostructure Interactions	425
4.1. Nanopatterns	425
4.2. Nanoparticles	427
4.3. Other Nanostructures	430
5. Concluding Remarks	431
References	432

CHAPTER 13. Imaging and Assembly of Nanoparticles in Biological Systems

Xiao-Hong Nancy Xu, Rudrax N. Patel

1. Introduction	435
2. Single Nanoparticles for Cellular Imaging of Living Cells	436
2.1. Synthesis and Characterization of Silver Nanoparticles	436
2.2. Real-Time Sizing of Single-Membrane Transporters	437
2.3. Mode of Actions of Antimicrobial Agents in Living Cells	439
2.4. Study of Biocompatibility of Nanoparticles	439
2.5. Single Ligand-Receptor Interactions	439
3. Nanoparticles for <i>In Vivo</i> Biomedical Imaging	441
3.1. Magnetic Resonance Imaging	441
3.2. Computed Tomography Imaging	444
3.3. Ultrasound Imaging	445
4. Assembly of Nanoparticles Using Biomolecules	446
4.1. DNA	446
4.2. Peptides and Proteins	447
4.3. Cell	450
5. Summary and Future Directions	452
References	453

CHAPTER 14. Resorbable Biomaterials

Yoshito Ikada

1. Introduction	457
2. Importance of Resorbable Biomaterials	458
3. Problem of Resorbable Biomaterials	459
4. Modes of Resorption of Biomaterials	459
4.1. Inorganic Biomaterials	460
4.2. Organic Biomaterials	460
5. Currently Available Resorbable Biomaterials	461
5.1. Naturally Occurring Polymers	462
5.2. Synthetic Polymers	465
6. Medical Applications of Resorbable Biomaterials	471
6.1. Liquid	471
6.2. Fibers	472
6.3. Sheets	472
6.4. Tubes	473
6.5. Rods, Screws, and Plates	473
6.6. Stents for Percutaneous Coronary Intervention	474
6.7. Scaffolds for Tissue Engineering	474
References	475

CHAPTER 15. Measurement Techniques for Determination of Molecular Size, Distance, and Stoichiometry of Bionanoparticles

Jeremy Hall, Dieter Moll, Wei Zhang, Peixuan Guo, Nicola Stonehouse, Mirna Urquidi-Macdonald

1. Introduction	478
2. Fluorescence Resonance Energy Transfer	478
3. Photoaffinity Cross-Linking	479
4. Ultracentrifugation	480
5. Light Scattering	480
6. Surface Plasmon Resonance	481
7. Mass Spectrometry	481
8. Mathematical Approaches for Determination of Stoichiometry	481
8.1. Simple Formula for Determination of the Stoichiometry of Biological Assemblages through Comparison of Slopes of Concentration Dependence	482
8.2. Determination of the Stoichiometry by Binomial Distribution	482
8.3. Determination of Stoichiometry by Finding the Common Multiple of 2 and 3	482
9. Microscopy Imaging Techniques	483
9.1. AFM and Cryo-AFM	483
9.2. Cryo-Electron Microscopy	484
9.3. Negative Stain Electron Microscopy	485
9.4. Scanning Transmission Electron Microscopy	486
10. Modeling	486
References	489

CHAPTER 16. Nanoscale Physicochemical Reactions at Bioceramics-Bone Tissue Interfaces

E. Jallot

1. Introduction	495
2. Physicochemical Reactions at the Calcium Phosphate Ceramic/Bone Tissue Interface	497
2.1. Hydroxyapatite and β -Tricalcium Phosphate	497
2.2. Biphasic Calcium Phosphate Ceramics	498
3. Physicochemical Reactions at the Bioactive Glass/Bone Tissue Interface	499
3.1. Definition of Bioactive Glasses	499
3.2. Kinetics of Interfacial Reactions	500
3.3. Sol-Gel-Derived Bioactive Glasses	502
4. Physicochemical Reactions at the Biovitroceramics/Bone Tissues Interface	503
4.1. Definition of Biovitroceramics	503
4.2. Kinetics of Interfacial Reactions	503
5. Physicochemical Reactions at the Bioactive Titanium Surface	505
6. Conclusions	506
References	506
Index	511
