About the Editor.....	xvii
List of Contributors.....	xix
Contents of Volumes in This Set.....	xxiii

CHAPTER 1. Self-Assembly of Ionic-Complementary Peptides and Their Applications in Nanobiotechnology

S. Y. Fung, Y. Hong, S. S. Dhadwar, P. Chen, X. Zhao

1. Introduction.....	2
1.1. Trends in Nanobiotechnology.....	2
1.2. Synthetic Self-assembling Peptides.....	4
2. Self-assembly of Ionic-Complementary Peptides.....	8
2.1. Discovery of a New Class of Ionic-Complementary Peptides.....	8
2.2. Molecular Structure.....	9
2.3. Unusually Stable β -Sheets.....	13
2.4. Helix-Sheet Transition.....	16
2.5. Sequence Effect.....	20
2.6. Concentration Effect.....	21
2.7. Peptide Chain Length Effect.....	26
2.8. pH Effect.....	28
2.9. Salt Effect.....	30
2.10. Shear Effect and Dynamic Self-assembly.....	33
2.11. Proposed Self-assembly Mechanism.....	37
2.12. Numerical Modeling of Peptide Self-assembly.....	41
3. Applications.....	46
3.1. Tissue Engineering.....	46
3.2. Drug and Gene Delivery.....	49
3.3. Biological Surface Patterning.....	54
3.4. Relevance to Conformational Diseases.....	56
4. Concluding Remarks.....	60
References.....	61

CHAPTER 2. From Nanocluster Assays to Optical Biochips for Nanobiotechnology

C. Mayer, V. Matyushin, J. Haglmüller, Th. Schalkhammer

1. Nanoclusters.....	68
1.1. Metal Clusters.....	68
1.2. Cluster Composition and Shape.....	73
1.3. Clusters as Signal Transducers.....	76
2. Nanoclusters and Color.....	77
2.1. Techniques for Preparing Noble Metal Colloids.....	77
2.2. Clusters and Biomolecules.....	82
2.3. Colloidal Techniques.....	84

2.4. Cluster Imaging	88
2.5. Resonance-Enhanced Nanocluster Color Effects	89
2.6. Nanodistance Transduction via REA	99
3. Conclusion	104
References	104

CHAPTER 3. Engineering Surface-Erodible Polyanhydrides with Tailored Microstructure for Controlled Drug and Protein Delivery

Amy S. Determan, Balaji Narasimhan

1. Introduction	108
2. Synthesis	109
2.1. Melt Polycondensation	110
2.2. Solution Polymerization	110
2.3. Ring Opening Reactions	111
3. Characterization	112
3.1. Chemical Composition	112
3.2. Molecular Weight	115
3.3. Crystallinity and Thermal Properties	116
3.4. Surface and Bulk Analysis	116
3.5. Stability	117
3.6. Biocompatibility	118
4. Structures	119
4.1. Aliphatic	119
4.2. Aromatic	119
4.3. Unsaturated	120
4.4. Aliphatic-Aromatic Homopolymers	120
4.5. Amino Acid-Based	120
4.6. Fatty Acid-Based	121
4.7. Poly(ester-anhydrides) and Poly(ether-anhydrides)	122
4.8. Cross-Linking	122
4.9. Branched	123
4.10. Blends	124
5. Characterization of Polymer Erosion	125
5.1. Polymer Degradation	125
5.2. Polymer Erosion	125
6. Fabrication of Noninjectable Delivery Devices	127
6.1. Compression Molding	127
6.2. Melt Molding	127
6.3. Solvent Casting	127
7. Fabrication of Microspheres	128
7.1. Hot-Melt Microencapsulation	128
7.2. Solvent Removal Microencapsulation	128
7.3. Spray-Drying Microencapsulation	129
7.4. Double-Walled Microspheres	130
8. Drug-Polymer Interactions	130
9. <i>In vitro</i> Release Kinetics	131
9.1. Drug Release	131
9.2. Protein Release	133

10. Future Opportunities	137
References	137

CHAPTER 4. Bioactive Nanomaterials in Bone Grafting and Tissue Engineering

R. Murugan, S. Ramakrishna

1. Introduction	142
2. Bone Grafting	142
2.1. Bone as a Tissue: A Preface	142
2.2. Bone-Healing Mechanism	143
2.3. Need for Bone Grafting	144
2.4. Bone Grafting Techniques	144
2.5. Synthetic Biomaterials as Bone Grafts	146
2.6. Role of Nano Hydroxyapatite in Bone Grafting	146
2.7. Hydroxyapatite-based Nanocomposites in Bone Grafting	151
2.8. Challenges and Future Directions in Bone Grafting	153
3. Bone Tissue Engineering	154
3.1. Introduction	154
3.2. Nanotechnology in Tissue Engineering	156
3.3. Basic Concept of Bone Regeneration	156
3.4. Role of BMP as Osteoinductive Agent	157
3.5. Nano Hydroxyapatite in Bone Tissue Engineering	157
3.6. Nanocomposites in Bone Tissue Engineering	159
3.7. Challenges and Future Directions in Bone Tissue Engineering	162
4. Conclusions	162
Glossary	163
References	166

CHAPTER 5. Inorganic/Polymer Nanocomposites for Dental Restoration and Bone Replacement Applications

Qing Liu, Justin Eggleton

1. Introduction	169
2. Nanofiller/Polymer Composites	171
2.1. Synthesis of Nanoapatite	171
2.2. Processing of Nanoapatite Particles	174
2.3. Surface Modification of Nanoparticles	174
2.4. Dispersion Process	176
2.5. Methods for Preparing Nanoapatite/Polymer Matrix Composites	177
2.6. Nanocomposite Systems	178
3. Nanoapatite Coating on Polymer Matrix	184
3.1. Biomimetic Coating Process	184
4. Inorganic–Organic Hybrid Composites	188
4.1. Polymer–SiO ₂ Hybrid Sol–Gel Composites	190
5. Concluding Remarks	192
References	193

CHAPTER 6. Biomimetic Nano-ordered Apatites

Yu-Fen Chou, Isabella Wulur, James C. Y. Dunn, Benjamin M. Wu

1. Introduction	198
2. Hydroxyapatite and Biological Apatites	198
2.1. Compositional and Structural Differences	198
2.2. Structural Changes in Nature	199
3. Motivation: Bone Engineering with Biological Apatites	199
3.1. Biological Apatites Mediate Bone–Implant Interface	199
3.2. Limitations of Bioceramics and Polymers as Exclusive Grafting Materials	200
3.3. Apatite Coating Techniques	200
4. Biomimetic Apatites	201
4.1. Conventional Biomimetic Apatite Coating	201
4.2. Accelerated Biomimetic Apatite Coating	202
4.3. Formation Mechanism of Nano-ordered Apatites	202
4.4. Control over Nano-Topography of Plate-like Apatite Structures	208
5. Biological Response to Biomimetic Coatings	212
5.1. Protein-Apatite Interactions	212
5.2. Biological Response to Conventional Biomimetic Apatites	214
5.3. Biological Response to Accelerated Biomimetic Apatites	214
5.4. Significance	219
6. Conclusions	220
References	220

CHAPTER 7. DNA-Based Artificial Nanostructures: Fabrication, Properties, and Applications

Young Sun, Ching-Hwa Kiang

1. Introduction	224
2. DNA Fundamentals	224
3. Attachment of DNA to Surfaces	225
4. Self-Assembly and Construction of Nanostructures Through the Use of DNA	225
4.1. Nanostructures of Pure DNA	225
4.2. DNA-Based Assembly of Metal Nanoparticles	226
4.3. Construction of Semiconductor Particle Arrays with the Use of DNA	227
4.4. DNA-Directed Nanowires	230
4.5. DNA Functionalized with Carbon Nanotubes	232
4.6. Field Effect Transistor Based on DNA	236
4.7. Self-Assembly with the Use of Artificial DNA	238
5. DNA-Based Nanomaterials as Biosensors	239
6. Properties of DNA-Linked Gold Nanoparticles	243
6.1. Aggregation of DNA-Modified Gold Nanoparticles	244
6.2. Melting of DNA-Linked Gold Nanoparticle Aggregations	244
6.3. Effects of External Variables on the Melting Properties	245
7. Conclusion	246
References	246

CHAPTER 8. Protein Patterning for Applications in Biomaterials and Biodevices

K. G. Pruden, A. Panitch

1. Introduction	249
2. Interactions Between Proteins and Surfaces	250
3. Protein Immobilization	251
3.1. Physical Adsorption	251
3.2. Specific Chemical Interactions	251
4. Definition of Pattern Geometry	253
5. Individual Protein Placement	253
5.1. AFM Nanolithography	253
5.2. Scanning Tunneling Microscopy (STM) Nanolithography	255
5.3. Other Techniques	255
5.4. General Issues	256
6. Field Protein Placement	256
6.1. Photolithography	257
6.2. Soft Lithography	264
6.3. Other Deposition Methods	270
7. Challenges in Protein Patterning	270
8. Conclusions	271
References	271

CHAPTER 9. Polymer Nanofibers and their Applications in Bioengineering

M. Kotaki, Zheng-Ming Huang, S. Ramakrishna

1. Polymer Fibers	276
1.1. General Introduction	276
1.2. Spinning Techniques	276
1.3. Polymer Nanofibers	277
2. Design of Nanofibers by Electrospinning	278
2.1. The Electrospinning Technique	278
2.2. Fiber Geometry	282
2.3. Fiber Diameter	283
2.4. Alignment	286
2.5. Surface Morphology	289
2.6. Composite Nanofibers	290
3. Characterization of Nanofibers	292
3.1. Molecular Structure	292
3.2. Mechanical Properties	293
3.3. Biochemical Properties	293
4. Applications of Nanofibers in Bioengineering	293
4.1. Molecular Filters	293
4.2. Tissue Regeneration	294
4.3. Wound Dressing	294
4.4. Drug Delivery System	295
4.5. Protective Clothing	295
4.6. Nanosensors	295
5. Summary	296
References	297

CHAPTER 10. Nanostructured Non-fouling Films for BioMEMS Applications

Sadhana Sharma, Ketul C. Popat, Tejal A. Desai

1. Introduction	299
2. Biomedical Micro-electrical-mechanical Systems	300
3. Fouling and Compatibility Issues for BioMEMS	302
4. Silicon as a Biomaterial	303
5. Poly(ethylene glycol)	304
6. Poly(ethylene glycol) in Action: Mechanism of Biofouling Control	305
7. PEG Films for Silicon-Based Substrates	307
7.1. Solution-Phase Technique for Modification of Silicon with PEG	307
7.2. Vapor-Phase Technique for Modification of Silicon with PEG	311
8. Nonbiofouling Nature of PEG Interfaces	317
9. Conclusions	319
References	319

CHAPTER 11. Nucleic Acid Engineered Nanomaterials and Their Applications

Dan Luo, Yougen Li

1. Preface—Nucleic Acid Engineering: A New Bottom-Up Nanotechnology Through Combination of Engineering, Chemistry, Polymer Sciences, Molecular Biology and Cell Biology	324
2. Introduction	324
2.1. Nucleic Acids	324
2.2. Why Nucleic Acids are Good Building Blocks for the Bottom-Up Approach	325
3. Nucleic Acid Engineered Materials (NAEM)	326
3.1. Nucleic Acid Building Blocks	326
3.2. Nucleic Acid Materials	327
3.3. Nucleic Acid-Based Hybrid Materials	330
4. Applications of NAEM	332
4.1. Mechanical Devices, Machines and Nanomotor	332
4.2. Nanowires	337
4.3. DNA-Based Computing	339
4.4. DNA Patterning	339
4.5. DNA Lithography	340
4.6. Sensors	341
5. Challenges of NAEM	342
References	342

CHAPTER 12. Risk Assessment of Microparticles and Nanoparticles and Human Health

Antonietta M. Gatti, Stefano Montanari

1. Introduction: The Nanoparticle–Human Body Interaction	347
2. Definition of Nanopathology	350
3. The Start	350
4. Methods of Analysis	351
4.1. Sample Preparation	353

5. Nanoparticle Presence Organ by Organ	354
5.1. Lung	355
5.2. Colon	356
5.3. Liver and Kidney	357
5.4. Blood	361
6. Bioengineering Approach to the Balkan Syndrome	363
7. Risk Assessment and Conclusions	368
References	368

CHAPTER 13. Functional Polymers for Bone Tissue Engineering Applications

Jie Song, Carolyn R. Bertozzi

1. Introduction	372
2. Functional Synthetic Hydrogel Scaffolds for Hard Tissue Engineering Applications	373
2.1. Environmentally Responsive Functional Hydrogels Mimicking Collagenous ECM as Growth Factor Carriers	374
2.2. Functional Hydrogels Mimicking Mineral-Binding Anionic Noncollagenous ECM Proteins	375
2.3. High-Affinity Integration of Functional Hydrogels with Biominerals	378
3. Functional Self-assembling Polymer Scaffolds for Template-Driven Biomineralization	382
3.1. Amphiphilic Self-assembling Thin Films	382
3.2. Polymerizable Self-assembling Peptide-Amphiphile Nanofibers	383
3.3. Bolaamphiphilic Self-assembling Polymer Ribbons	385
3.4. Extension of 2-D Bolaamphiphilic Self-assembling Polymer Templates to 3-D Composites	387
4. Concluding Remarks	388
References	389

CHAPTER 14. Applications of Nanotechnology in Tissue Engineering

Xuejun Wen, Donglu Shi, Ning Zhang

1. Introduction	393
2. Applications of Nanotechnology in Tissue Engineering	394
2.1. Applications of Nanotechnology in Biomaterial Scaffolds	395
2.2. Applications of Nanotechnology in Cellular Behavior and Engineering	405
2.3. Applications Nanotechnology in Biomolecular Manipulation	408
3. Summary	412
References	412

CHAPTER 15. Nanostructured Scaffolds for Tissue Engineering and Regeneration

Victor J. Chen, Guobao Wei, Peter X. Ma

1. Introduction	415
2. Collagen-Based Scaffolding	416
3. Self-assembling Materials	418
4. Electrospinning	420

5. Phase Separation	422
5.1. Preparation of Polymer Matrices with a Nanofibrous Network.....	425
5.2. Preparation of Nanofibrous Matrices with Macroporous Structures.....	426
6. Composite Scaffolds Containing Nanostructured Biomaterials	428
6.1. Polymer/Ceramic Composite Scaffolds.....	429
6.2. Polymer/Ceramic Nanocomposite Scaffolds	430
7. Conclusion	433
References	433

CHAPTER 16. Vesicles and Liposomes in Sensor Technology

Stavroula Sofou, James L. Thomas

1. Introduction	437
1.1. Definitions.....	438
1.2. Constituent Molecules	438
1.3. General Preparation Methods.....	439
2. Physical Properties.....	440
2.1. Individual Vesicle Properties	441
2.2. Vesicle Interactions	443
3. Biosensor Applications of Vesicles—Making Use of the Unique Physicochemical Characteristics of Vesicles.....	445
3.1. Physical Property: Permeability Barrier	446
3.2. Physical Property: Membrane Fluidity.....	449
3.3. Physical Property: Hydrophobicity or Interfacial Properties.....	451
3.4. Other Physical Properties	452
4. Conclusions and Future Prospects.....	452
References	454

CHAPTER 17. Self-Assembling Nanostructured Injectable Polymeric Gels for Drug Delivery

Michael Determan, Surya K. Mallapragada

1. Introduction	458
2. Polymeric Systems that Form Nanostructured Self-Assembling Gels.....	458
2.1. Ploxamers	459
2.2. Polysaccharide-Based Polymers.....	459
2.3. pH Sensitive Polymers.....	460
2.4. Bioadhesive Polymers	460
2.5. NIPAAm-Based Polymers	461
2.6. Biodegradable Polymers.....	461
2.7. Protein-Polymer Systems	461
3. Investigation of Self-Assembly Processes	461
3.1. Introduction	462
3.2. Rheological Studies	462
3.3. Static and Dynamic Light Scattering Studies.....	463
3.4. Small Angle Neutron and X-ray Scattering Studies.....	464
3.5. Calorimetry Studies	464
3.6. Microscopy	465
3.7. NMR, FTIR Spectroscopic and Florescence Probe Methods.....	466
3.8. Theoretical and Computational Studies.....	467

4. Applications in Drug Delivery.....	468
4.1. Injectable Soluble Formulations.....	468
4.2. Topical Formulations.....	469
4.3. Coatings.....	469
4.4. Bioadhesive Formulations.....	470
4.5. Biodegradable Formulations.....	470
5. Conclusions.....	471
References.....	471
Index.....	475
