Preface v

Acknowledgements vi

Chapter 1 : Introduction 1

Chapter 2 : Surfaces 9
2.1 Introduction 9
2.2 The solid–vapor interface 11
2.2.1 Surface energy 11
2.2.2 Equilibrium shape of a crystal 14
2.2.3 Structure of nanoclusters 17
2.2.3.1 Icosahedron (Ih) 19
2.2.3.2 Decahedron (Dh) 19
2.2.4 Surface reconstruction and surface relaxation 22
2.2.4.1 Surface relaxation 23
2.2.4.2 Surface reconstruction 23
2.2.4.3 Reconstructed surfaces as templates for nanostructures 27
2.2.5 Surface defects and crystal defects 27
2.2.5.1 Defects on the vicinal surfaces 27
2.2.5.2 Crystal defects 29
2.2.6 Effect of surface curvature 30
2.2.6.1 Chemical potential at the curved surfaces 30
2.2.6.2 Pressure under a curved surface 31
2.2.6.3 Vapor pressure over a curved surface 33
2.2.6.4 Vacancy concentration under a curved surface 33
2.2.6.5 Solubility of curved surfaces 34
2.2.7 Examples and applications 36
2.2.7.1 Melting point of nanoparticles 36
2.2.7.2 Coarsening of particles — the Ostwald ripening 36
2.2.7.3 Sintering of solids 37
2.2.7.4 Condensation of vapor in a capillary: agglomeration of nanoparticles due to pendular forces 38

2.3 The solid–liquid interface 40
2.3.1 The surface tension 40
2.3.2 The contact angle 41
2.3.3 The contact angle hysteresis 44
2.3.4 Superhydrophobic, superhydrophilic and self cleaning surfaces 46
2.3.4.1 Increase in contact angle on rough hydrophobic surfaces: the "lotus effect" 46
2.3.4.2 The Wenzel and the Cassie–Baxter equations 47
2.3.4.3 Superhydrophilic surfaces: Enhanced hydrophilicity due to surface roughness 51
2.3.4.4 Examples of superhydrophobic and superhydrophilic surfaces by nanostructuring 55
2.3.4.5 Titania coated superhydrophilic and self cleaning surfaces 55
Appendix 2.1 : Melting point of nanoparticles 58
Problems 61

Chapter 3 : Zero Dimensional Nanostructures I Review of Some Topics in Physics 65
3.1 Introduction 65
3.2 Size dependence of properties in the nanometer range 66
3.3 Review of some topics in physics 69
3.3.1 Particle and wave: The Schrodinger equation 69
3.3.1.1 The hydrogen atom 72
3.3.1.2 A free particle 73
3.3.1.3 Particle in an infinite potential square well 73
3.3.2 Free electron model of a solid 76
3.3.3 Electron in a periodic potential: the occurrence of the band gap 79
3.3.4 Reciprocal lattice and the Brillouin zone 83
3.3.4.1 The reciprocal lattice 83
3.3.4.2 The Brillouin zones 84
3.3.5 The band structures of semiconductors 86
3.3.6 Energy levels within the band gap — shallow traps and the deep traps 91
3.3.6.1 Shallow traps in doped semiconductors 91
3.3.6.2 Deep level traps 93
3.3.7 Characteristic lengths in the nanometer range 93
3.3.7.1 de Broglie Wavelength 93
3.3.7.2 Mean free path of electrons 94
3.3.7.3 Exciton and Bohr exciton radius 95
3.3.7.4 Other length scales 101
3.3.8 The Density of States function for low dimensional systems 102
3.3.8.1 The quantum well 104
3.3.8.2 The quantum wire 109
3.3.8.3 The quantum dot 111

Problems 114

Chapter 4 : Semiconductor quantum dots 117
4.1 Introduction 117
4.2 Energy levels and change in band gap with size in quantum dots 118
4.3 Coulomb blockade in a quantum dot 121
4.4 Formation of self assembled quantum dots by epitaxial deposition 124
4.4.1 Introduction 124
4.4.2 Quantum dots by epitaxial deposition 125
4.4.3 Energetics of self assembled quantum dot formation—the Stranski–Kranstanow growth 127
4.4.4 Stacked layers of quantum dot arrays 131
4.5 Applications of quantum dots 133
Problems 137

Chapter 5 : Zero Dimensional Nanostructures II The Metal Nanoparticles 141
5.1 Introduction 141
5.2 Optical properties of bulk metals 141
5.3 Interaction of light with metal nanoparticles 145
5.4 Surface plasmon resonance 147
5.4.1 Introduction 147
5.4.2 Effect of particle shape 151
5.4.3 Applications 152
Problems 157

Chapter 6 : Zero Dimensional Nanostructures III The Nanoscale Magnetic Structures 159
6.1 Introduction 159
6.2 Definitions 160
6.2.1 Magnetic lines of force 160
6.2.2 Magnetic field 161
6.2.3 Magnetic moment and magnetization 161
6.2.4 Magnetic moment of an atom 163
6.2.5 Magnetic moment of a solid 164
6.3 Classification of magnetic materials 165
6.3.1 Diamagnetic materials 165
6.3.2 Paramagnetic materials 166
6.3.3 Ferromagnetic materials 167
6.3.4 Antiferromagnetic and ferrimagnetic materials 168
6.4 Nanoscale ferromagnetic materials 168
6.4.1 Magnetization curve of a ferromagnetic crystal 168

6.4.2 Magnetic anisotropy 170
6.4.2.1 Magnetocrystalline anisotropy 170
6.4.2.2 Shape anisotropy 174
6.4.2.3 Surface anisotropy 176
6.4.3 Superparamgnetism 178
6.4.4 Superparamagnetic materials: Ferrofluids 185
6.4.5 Nanostructures exploiting the shape anisotropy 187
6.4.6 Spin dependent scattering: The Giant Magnetoresistance (GMR) 189
Problems 194

Chapter 7 : Zero Dimensional Nanostructures IV Colloids and Colloidal Crystals 195
7.1 Introduction 195
7.2 The van der Waal's forces 196
7.2.1 Introduction 196
7.2.2 The van der Waal's forces between particles 199
7.2.3 Effect of the particle geometry 202
7.2.3.1 Plane parallel plates 202
7.2.3.2 Two equal spheres 203
7.2.3.3 Sphere and a plate 203
7.2.4 Charge on the particle surfaces 204
7.2.5 Zeta potential and the isoelectric point 207
7.2.6 Electrostatic stabilization: The electrical double layer 209
7.2.6.1 Introduction 209
7.2.6.2 Thickness of the double layer 210
7.2.6.3 Controlling the stability of the electrostatically stabilized suspensions 215
7.3 Steric stabilization of suspensions 216
7.3.1 Introduction 216
7.3.2 Mechanism 217
7.3.3 Requirement on the chain length 220
7.4 Colloidal crystals for photonic applications 226
7.4.1 Introduction 226
7.4.2 Soft and hard interactions 229
7.4.3 Preparation of colloidal crystals 231
Problems 234

Chapter 8 : Carbon Nanostructures 237
8.1 Introduction 237
8.2 Structure 238
8.2.1 Structure of graphite 238
8.2.2 Structure of graphene 240

8.2.3 Structure of fullerene 244
8.2.4 Structure of carbon nanotubes 246
8.3 Preparation of carbon nanotubes 251
8.3.1 The arc–discharge method 252
8.3.2 Laser vaporization 253
8.3.3 Chemical vapor deposition 254
8.3.4 Patterned growth of carbon nanotubes 255
8.3.5 Theories of nanotube growth 256
8.4 Preparation of graphene 256
8.5 Properties 258
8.5.1 Mechanical properties 258
8.5.1.1 Theoretical modeling of the modulus, strength and fracture 259
8.5.1.2 Experimental measurements of modulus and strength 261
8.5.2 Electrical properties 265
8.5.2.1 Electrical properties of graphene 265
8.5.2.2 Electrical properties of carbon nanotubes 268
8.6 Applications of carbon nanotubes 270
8.6.1 Composites 270
8.6.2 Field emission 270
8.6.3 Conductive composites 273
8.6.4 Other applications 276
Problems 278

Chapter 9 : Other One Dimensional Nanostructures 281
9.1 Introduction 281
9.2 Growth of one dimensional nanostructures 282
9.2.1 The vapor-liquid-solid (VLS) nanowire growth process 282
9.2.1.1 Dependence of growth rate on the diameter 287
9.2.1.2 Conditions for nanowire growth 289
9.2.2 Template assisted growth of nanowires 293
9.2.3 Exploitation of inherent or induced surface energy anisotropy 294
9.3 Selected properties and applications 295
Problems 300

Chapter 10 : Two Dimensional Nanostructures 301
10.1 Introduction 301
10.2 Thin film deposition 302
10.2.1 Some considerations in thin film deposition 302
10.2.2 Physical vapor deposition (PVD) 304
10.2.3 Chemical vapor deposition 310
10.2.4 The sol – gel process 315

10.2.4.1 Introduction 315
10.2.4.2 Sols from metal salts 317
10.2.4.3 Sols from alkoxides 319
10.2.4.4 Thin film deposition from a sol 322
10.2.4.5 Cracking of gels and films 325
10.2.4.6 Preparation of mesoporous materials 327
10.2.5 Atomic Layer Deposition (ALD) 328
10.2.6 Layer–by–layer (LBL) deposition 332
10.2.6.1 Introduction 332
10.2.6.2 The layer–by–layer deposition process 332
10.2.6.3 Controlling the thickness of the individual layers 336
10.2.6.4 Incorporating nanoparticles in an LBL film 337
10.2.6.5 Surface functionalization of nanoparticles 338
10.3 Multilayers for mechanical engineering applications 339
10.3.1 Introduction 339
10.3.2 The hardening mechanisms for superlattices 340
10.3.2.1 Dislocation nucleation and multiplication within a layer 341
10.3.2.2 Dislocation movement across an interface 344
10.3.2.3 Comparison with experiments 348
10.3.3 Mechanisms for nanocomposite coatings 349
Problems 353

Chapter 11 : Bulk Nanostructured Materials 355
11.1 Introduction 355
11.2 Preparation of bulk nanocrystalline metals 355
11.2.1 Consolidation of fine metal powder by cold compaction 356
11.2.2 Electrodeposition 357
11.2.3 Crystallization of metallic glasses 358
11.2.4 Severe plastic deformation (SPD) 358
11.2.5 Nanocrystalline steel by thermomechanical working 360
11.3 Mechanical properties of nanoscale metals 360
11.3.1 Hardness and nanoindentation 360
11.3.2 Effect of nano-grain size on the concentration of defects 362
11.3.3 Effect of grain size on the yield strength: the inverse Hall–Petch effect 364
11.3.4 Ductility of the nanocrystalline metals 368
Problems 374

Chapter 12 : Polymer Nanocomposites 377
12.1 Introduction 377
12.2 Introduction to the mechanical properties of composites 378
12.2.1 Modulus and strength of the unidirectional fiber reinforced composites . 380

12.2.2 Short fiber and particle reinforced composites 383
12.2.2.1 Importance of the aspect ratio 383
12.2.2.2 Modulus and strength of short fiber composites 386
12.2.2.3 The Halpin–Tsai and Mori–Tanaka formulations 388
12.3 Polymer–CNT nanocomposites 392
12.3.1 Introduction 392
12.3.2 Some important considerations in CNT–composites 393
12.3.2.1 Aspect ratio of the CNT 393
12.3.2.2 Shear strength of the matrix–CNT interface 394
12.3.2.3 Dispersion of the nanotubes in the matrix 395
12.3.2.4 Waviness of the nanotubes 397
12.3.3 Processing and properties of the polymer–CNT composites 398
12.4 Polymer–clay nanocomposites 401
12.4.1 Filled polymers vs. the polymer nanocomposites 401
12.4.2 Clays used in the nanocomposites 403
12.4.3 Preparation of the polymer–exfoliated clay nano-composites 408
12.4.4 Properties of the polymer–clay nanocomposites 410
12.4.4.1 Introduction 410
12.4.4.2 Mechanical properties 411
12.4.4.3 The barrier properties of the polymer nanocomposites 416
12.4.5 The nanoeffects 419
Problems 421

Chapter 13: Molecules for Nanotechnology: Polymers, Biopolymers, Dendrimers and Surfactants 423
13.1 Polymers 423
13.1.1 Some common polymers 424
13.1.2 Properties of polymers 424
13.1.2.1 Molecular weight 424
13.1.2.2 Length of a polymer chain 426
13.1.2.3 Bonding within and between polymer chains: thermoplastics, thermosets and elastometers 429
13.1.2.4 Glass transition temperature 431
13.1.3 Crystalline polymers 433
13.1.4 Polymer solutions: Phase separation 434
13.2 Polyelectrolytes 438
13.3 Copolymers 439
13.3.1 Types of copolymers 439
13.3.2 Phase separation in block copolymers 440
13.4 Biopolymers 442
13.4.1 Proteins 443

13.4.2 Nucleic acids 446
13.4.2.1 Deoxyribonucleic acid (DNA) 447
13.4.2.2 Ribonucleic acid (RNA) 449
13.5 Surfactants 450
13.5.1 Introduction 450
13.5.2 Types of surfactants 452
13.5.3 Absorption of surfactant molecules in a solution 456
13.5.3.1 Introduction 456
13.5.3.2 The Gibbs absorption equation 460
13.6 Dendrimers 463
13.6.1 Synthesis 463
13.6.2 Properties and applications 466
Problems 468

Chapter 14: Self Assembly and Self Organization 471
14.1 Introduction 471
14.2 Interactions important in self assembly 472
14.2.1 Ionic and electrostatic interactions 472
14.2.2 The π-interactions 474
14.2.3 The hydrogen bond 476
14.2.4 van der Waals interactions 478
14.2.5 Coordinative bond and coordination complex 478
14.2.6 Dative bond 480
14.2.7 The hydrophobic effect 480
14.3 Examples of self assembled systems 481
14.3.1 Self assembled monolayers (SAM) 481
14.3.2 Self assembly of amphiphiles into nanostructures 482
14.3.2.1 The critical micelle concentration (CMC) 482
14.3.2.2 Spherical micelle — the simplest amphiphile nanostructure 483
14.3.2.3 Other nanostructures — relation to the packing factor 484
14.3.3 Langmuir–Blodgett (L–B) films 486
14.3.3.1 Deposition of nanoparticles films using the L–B technique 491
14.3.4 Liquid crystals 491
14.3.5 Dendrimer self assembly 493
Problems 495

A.1. Appendix 1: Description of crystal structure 497

A.2. Appendix 2: Review of the mechanical properties of crystalline solids 502
A2.1 Stress 502
A2.2 Strain 504

A2.3 The elastic moduli 506
A2.4 The elastic strain energy 507
A2.5 The tensile test 508
A2.6 The theoretical yield stress 513
A2.7 The critical resolved stress 514
A2.8 Dislocation multiplication and strain hardening 516
A2.8.1 Dislocation multiplication 517
A2.8.2 Strain hardening 520
A2.9 Dispersion hardening 520
A2.10 Creep 522
A2.11 Brittle fracture 526
