<i>Foreword</i>	v
<i>Preface</i>	vii
<i>Introduction</i>	ix
1 Survey of the Problem and Certain Definitions	1
2 Synthesis and Stabilization of Nanoparticles	7
2.1 Chemical Reduction	8
2.2 Reactions in Micelles, Emulsions, and Dendrimers	12
2.3 Photochemical and Radiation Chemical Reduction	16
2.4 Cryochemical Synthesis	20
2.5 Physical Methods	30
2.6 Particles of Various Shapes and Films	32
3 Experimental Techniques	37
3.1 Electron Microscopy	38
3.1.1 Transmission electron microscopy	38
3.1.2 Scanning electron microscopy	38
3.2 Probe Microscopy	39
3.3 Diffraction Techniques	42
3.3.1 X-ray diffraction	42
3.3.2 Neutron diffraction	43
3.4 Miscellaneous Techniques	43
3.4.1 EXAFS	43
3.4.2 X-ray fluorescence spectroscopy	43
3.4.3 Mass spectrometry	44
3.4.4 Photoelectron spectroscopy	44
3.5 Comparison of Spectral Techniques Used for Elemental Analysis	44
4 Cryochemistry of Metal Atoms and Nanoparticles	47
4.1 Reactions of Magnesium Particles	47
4.1.1 Grignard reactions	47
4.1.2 Activation of small molecules	51
4.1.3 Explosive reactions	53
4.2 Silver and Other Metals	57
4.2.1 Stabilization by polymers	57
4.2.2 Stabilization by mesogenes	65
4.3 Reactions of Rare-Earth Elements	69
4.4 Activity, Selectivity, and Size Effects	75
4.4.1 Reactions at superlow temperatures	75
4.4.2 Reactions of silver particles of various sizes and shapes	83

4.5	Theoretical Methods	87
4.5.1	General remarks	87
4.5.2	Simulation of the structure of mixed metallic particles	89
4.5.3	Simulation of properties of intercalation compounds	92
4.5.4	Simulation of structural elements of organometallic co-condensates	94
5	Chemical Nanoreactors	99
5.1	General Remarks	99
5.2	Alkali and Alkali-Earth Elements	103
5.3	Transition Metals of Groups III–VII in the Periodic Table	112
5.4	Elements of the group VIII of the Periodic System	121
5.5	Subgroups of Copper and Zinc	131
5.6	Subgroup of Boron and Arsenic	137
5.7	Assemblies Involving Nanoparticles	141
6	Group of Carbon	147
6.1	Fine Particles of Carbon and Silicon	147
6.2	Fullerenes	148
6.3	Carbon Nanotubes	150
6.3.1	Filling of tubes	151
6.3.2	Grafting of functional groups. Tubes as matrices	152
6.3.3	Intercalation of atoms and molecules into multi-walled tubes	154
7	Size Effects in Nanochemistry	157
7.1	Models of Reactions of Metal Atoms in Matrices	157
7.2	Melting Point	159
7.3	Optical Spectra	162
7.4	Kinetic Peculiarities of Chemical Processes on the Surface of Nanoparticles	168
7.5	Thermodynamic Features of Nanoparticles	170
8	Nanoparticles in Science and Technology	175
8.1	Catalysis on Nanoparticles	175
8.2	Oxide Reactions	184
8.3	Semiconductors, Sensors, and Electronic Devices	188
8.4	Photochemistry and Nanophotonics	197
8.5	Applications of CNTs	199
8.6	Nanochemistry in Biology and Medicine	202
	<i>Conclusion</i>	209
	<i>References</i>	215
	<i>Subject Index</i>	247
