

CONTENTS

	Page
1. Functions and Goals of Safety Science	1
2. Special Definitions	5
2.1 Damage	5
2.2 Danger, Endangerment, and Safety	6
2.3 Accident-like Occurrences Involving Damage	7
2.4 Source of Danger, Danger Field, Danger Potential, and Potential of Endangerment	7
2.5 Risk	8
3. Cybernetics and the Science of Safety	12
3.1 The Basics of Cybernetics	12
3.2 Cybernetic Approach of the Science of Safety	22
3.3 Systems Engineering as a Tool for the Evaluation of a Technical Plant as a Cybernetic Instrument	28
3.4 Mathematical Simulation	35
4. Safety Analysis	42
4.1 Tasks and Aims	42
4.2 Safety Analysis Work Methods	45
4.3 Qualitative Safety Analysis	78
4.4 Quantitative Safety Analysis	99
5. The Machine as a Safety Factor	109
5.1 The Machine Under Operational Stress	110
5.2 The Operational Behavior of the Machine	126
6. Man as a Safety Factor and as an Object of Protection	153
6.1 Medical Aspects	156
6.2 Psychological Aspects	210
6.3 Ergonomics	224
6.4 Education and Training	247
7. The Environment as a Safety Factor and an Asset Worthy of Protection	261
7.1 Natural and Civilizational Factors	262
7.2 Environmental Strain Through Accidents in Technical Installations	292
7.3 Environmental Factors Influencing a Technical Installation	318
8. Safety Legislation	352
8.1 The Concept of Safety Legislation	354
8.2 The Goals of Safety Legislation	361
8.3 The Prevention of Damage Through Governmental Protection Measures	367
8.4 Safety Legislation and Technical Standards	379
8.5 Correlations Between the Purpose and the Effect of Safety Rules	389
8.6 The Limits of Safety Standardization	393
8.7 Extralegal Limits	398
8.8 Trends in the Development of Safety Legislation	399
9. Social Aspects of Safety Science	402
9.1 Technology Assessment	403

9.2 Risk Acceptance	416
Index	453
