CONTENTS

Page

Chapter 1. HEAT TRANSFER PROCESSES AND THEIR COEFFICIENTS

1-1 Basic heat transfer processes 1
1-2 Thermal conductivity 1
1-3 Convective film coefficient 3
1-4 Stefan-Boltzmann's constant and equivalent radiation coefficient 3
1-5 Over-all heat transfer coefficient 4
1-6 Physical properties of substances related to heat transfer 5
General references 6
Problems 7

Chapter 2. THERMAL CONDUCTIVITES OF SOLID, LIQUID, AND GASEOUS SUBSTANCES

2-1 Thermal conductivity of metals and their alloys 8
2-2 Thermal conductivity of nonmetallic solids 12
2-3 Thermal conductivity of liquids 13
2-4 Thermal conductivity of gases and vapors 15
References 16
Problems 17

Chapter 3. CONDUCTION

3-1 Theory of heat conduction 18
3-2 Fourier's fundamental equation of steady-state heat conduction 20
3-3 Thermal resistivity 21
3-4 Variable thermal conductivity 24
3-5 Radial conduction through cylinders 25
3-6 Critical radius 27
3-7 Logarithmic mean area 29
3-8 Composite cylinders 30
3-9 Conduction through spheres 31
3-10 Steady slow of heat in a rod 32
3-11 Extended surfaces 35
3-12 Relaxation method for steady-state conduction 37
3-13 Numerical examples for the relaxation method and for solution by matrix 39
3-14 Graphical methods 44
References 50
Problems 50

Chapter 4. UNSTEADY-STATE HEAT TRANSFER

4-1 Periodic and aperiodic temperature variation 54
4-2 Infinite and semi-infinite solids 55
4-3 General equation of unsteagy-state heat conduction 55
4-4 General equation in cylindrical and spherical coordinates 58
4-5 Periodic temperature variation within a semi-infinite solid 61
4-6 Aperiodic temperature variation within a semi-infinite solid 67
4-7 Aperiodic temperature change within an infinite wall of finite thickness 72
4-8 Aperiodic temperature variation within a plate due to sudden change of temperature at both surfaces 77
4-9 Transient heat transfer between a solid of infinite thermal conductivity and the surrounding medium 93

4-10Graphical method for unsteady-state heat transfer 98
References 106
Problems 107

Chapter 5. THERMAL RADIATION
5-1 Quantum electrodynamic theory of radiation 110
5-2 A black body and monochromatic radiation 114
5-3 Emissivities and absorptivities 116
5-4 Intensity of radiation and Lambert's cosine law 122
5-5 Stefan-Boltzmann'a low, space density, and pressure of radiation 128
5-6 Wien's displacement law of radiation 131
5-7 Experimantal approach to black body 136
5-8 Kirchhoff's law 137
5-9 Net heat transfer between two radiating surfaces 140
References 152
Problems 153

Chapter 6. RADIATION OF GASES AND VAPORS
6-1 Theory of gas radiation 156
6-2 Comparison between radiation of solids and gases : absorption coefficient, radiation intensity, and Kirchhoff's law 159
6-3 Radiation of water vapor and carbon dioxide 162
6-4 Mean beam length and shape factor in radiation of gases 165
6-5 Radiation heat transfer between a gas and its confining surfaces 170
6-6 Radiation of luminous flames 177
6-7 Radiation shields 184
6-8 Solar radiation 185
References 195
Problems 195

Chapter 7. FLUID FLOW AND DIMENSIONAL ANALYSIS
7-1 Physical properties of fluids 199
7-2 Fundamental equations of fluid flow 204
7-3 Laminar and turbulent flows 206
7-4 The boundary-layer theory 209
7-5 Pressure drop in pipes and the equivalent diameter 212
7-6 Principles of similarity and dimensional analysis 217
References 224
Problems 224

Chapter 8. FORCED CONVECTION IN LAMINAR AND TURBULENT FLOW
8-1 The theory and types of convection processes 226
8-2 Dimensionless quantities and their physical meanings 227
8-3 Reference temperature of physical properties 230
8-4 Thermal boundary layer 232
8-5 Differential equations of forced convection in laminar boundary layer 233
8-6 Film coefficients, friction coefficients, and boundary-layer thickness of forced convection in laminar flow over a flat plate at constant temperature 240
8-7 Nusselt number 255
8-8 Analogy between momentum and heat transfer in turbulent flow; and critical Reynolds number for a plate 257
8-9 Film coefficients, friction coefficients, and boundary-layer thickness of forced convection in turbulent flow over a flat plate at constant temperature 262
References 270
Problems 271

Chapter 9. FORCED CONVECTION IN LAMINAR AND TURBULENT FLOW INSIDE TUBES

9-1 Application of dimensional analysis in forced convection (Nusselt equation) 274
9-2 Bulk temperature and log-mean temperature difference 278
9-3 Forced convection in laminar flow inside tubes 284
9-4 Forced convection in laminar flow inside annuli 294
9-5 Analogy between momentum and heat transfer for forced convection in turbulent flow inside tubes 295
9-6 Empirical equations for forced convection in turbulent flow inside tubes 297
9-7 Empirical equations for convection in transition region 302
9-8 Forced convection of liquid metal in laminar and turbulent flow inside tubes 303
9-9 Factors affecting forced convection in turbulent flow inside tubes 309
References 313
Problems 315

Chapter 10. FORCED CONVECTION IN LAMINAR AND TURBULENT FLOW AROUND SUBERGED BODIES

10-1 Drag force and pressure distribution on submerged bodies 319
10-2 Convective film coefficients for submerged cylinders 325
10-3 Convective film coefficient for submerged spheres and plates 332
10-4 Characteristic length and Reynolds number for flow across tube banks 335
10-5 Film coefficient and pressure drop in forced convection across tube bundles 339
References 350
Problems 351

Chapter 11. FREE CONVECTION

11-1 Approximate method applied to the problem of steady-state heat transfer from an isothermal vertical surface to a surrounding gas 354
11-2 Improved solution of steady-state heat transfer from an isothermal vertical surface of a surrounding gas 356
11-3 Schieren method for study of convection heat transfer 362
11-4 Interferometers for the study of convective heat transfer 366
11-5 General equation of free convection 371
11-6 Horizontal cylinders under free convection 374
11-7 Vertical cylinders and spheres, and inclined plates and cylinders under free convection 381
11-8 Horizontal plates and spheres, and inclined plates and cylinder under free convection 384
11-9 Free convection in an enclosed space between two prarllel surfaces 386
References 393
Problems 394

Chapter 12. HEAT TRANSFER WITH CHANGE OF PHASE

12-1 Types of condensation 397
12-2 Film condensation of steam on a flat surface under laminar flow 398
12-3 Film condensation on a flat surface under turbulent flow 403
12-4 Nusselt theory of film condensation on the surface of a horizontal cylinder 406
12-5 Experiments of film condensation o horizontal tubes 411
12-6 Effect of vapor velocity on film condensation 412
12-7 Effect of superheating on film condensation 413
12-8 Film condensation of mixed vapors 415
12-9 Dropwise condensation 415
12-10Evaporation 417
12-11Types of boiling 418
12-12The boiling curve 419
12-13Film boiling on a flat surface 423
12-14Film boiling around a vertical tube 425
12-15film boiling around a vertical tube 425
12-16Mechanism of nucleate boiling 426

12-17convective film coefficient in nucleate pool boiling 430
12-18Factors affecting nucleate pool boiling 433
12-19Boiling heat transfer of liquid metals 436
12-20Flow of boiling liquid under forced convection 437
12-21Heat transfer in the freezing process 439
References 442
Problems 443

Chapter 13. HEAT EXCHANGERS
13-1 General discussion 446
13-2 The arrangement of flow path in heat exchanger 447
13-3 Basic factors in design 453
13-4 Solution based on corrected logarithmic mean temperature difference 459
13-5 Solution based on number of transfer units 466
13-6 Corrections of experimental data 470
References 472
Problems 473

Chapter 14. MEASUREMENT OF THERMAL PROPERTIES
14-1 Steady-state measurement of the thermal conductivity of nonmetals and insulation materials 475
14-2 Unsteady-state measurement of the thermal conductivity of nonmetals and insulation materials 477
14-3 Steady-state measurement of the thermal conductivity of metals 481
14-4 Unsteady-state measurement of the thermal conductivity of metals 481
14-5 Determination of the thermal conductivity of metals at high temperatures by steady-state method 484
14-6 Determination of the thermal conductivity of high-temperature materials by an unsteady-state method 484
14-7 Determination of the thermal conductivity of liquid by a steady-state method 486
14-8 Determination of the thermal conductivity of gases by comparison with that of known gases 487
14-9 Determination of thermal conductivity of gases by direct measurement 489
14-10Determination of thermal conductivity of gases at high temperatures 490
14-11Determination of the thermal conductivity of gases by indirect measurement 491
14-12Measurement of total normal emissivity of solid material 492
14-13Measurement of spectral emissivity of solid materials at high temperatures 493
References 495

Chapter 15. AREODYNAMIC AND SPACE HEAT TRANSFER
15-1 Rarefied gases and flow regions 497
15-2 Recovery factor in continuum flow 500
15-3 Reference-temperature method for high-speed flow in the continuum region 504
15-4 Experimental data of skin-friction and heat-transfer coefficients for high-speed flow in the continuum region 506
15-5 Heat transfer to solid bodies traveling at high speed in space 508
15-6 Heat transfer to high-speed solid bodies re-entering earth atmosphere 512
References 515

Chapter 16. ELECTRICAL ANALOGY WITH HEAT TRANSFER PROBLEMS
16-1 Potential and stream functions in electrical and thermal fields for two-dimensional and steady-state conditions 516
16-2 Electrical analog method for measurement of shape factors 520
16-3 Electrical analogy with one-dimensional unsteady-state heat transfer 521
16-4 Application of electrical analogy to problems of transient heat flow in cylinders and spheres 524
16-5 Electrical analogy with transient heat convection between a solid of infinite thermal conductivity and the surrounding medium 526

16-6 Electrical analogy with radiation heat transfer in enclosures 529
References 535

Chapter 17. MASS TRANSFER
17-1 Modes of mass transfer 536
17-2 Molecular diffusion of gases 537
17-3 Mall diffusivity of gases 542
17-4 Molecular diffusion of liquids 545
17-5 Mass diffusivity of liquids 548
17-6 Mass transfer by convection 549
17-7 Empirical equations for mass transfer by turbulent convection 553
17-8 Mass transfer between two phases and the two-film theory 556
17-9 Mass transfer by change of phase 561
References 562
Problems
