<b>PRELIMINARY STUDIES AND ECONOMICS</b>	
<b>1. RAINFALL</b>	
1. General . . . . .	3
2. Rainfall Records . . . . .	3
3. Mean Annual Rainfall on an Area . . . . .	5
4. The Rainfall Year . . . . .	8
5. The Average Frequency of Dry Years . . . . .	8
6. Air Masses and Cold Fronts . . . . .	11
7. Bibliography . . . . .	11
<b>2. EVAPORATION</b>	
1. General . . . . .	13
2. Evaporation from Water Surfaces . . . . .	14
3. Evaporation from Land Surfaces and Transpiration . . . . .	19
4. Effect of Character of Rainfall on Evaporation Opportunity . . . . .	19
5. Rate of Surface Runoff . . . . .	20
6. Facilities for Infiltration . . . . .	20
7. Recapture of Soil Moisture . . . . .	20
8. Irrigation Water . . . . .	21
9. Bibliography . . . . .	21
<b>3. FACTORS AFFECTING RUNOFF</b>	
1. General . . . . .	23
2. Deep Seepage . . . . .	23
3. Geological Characteristics of the Watershed . . . . .	24
4. Extent of Lakes and Swamps . . . . .	25
5. Vegetation . . . . .	26
6. Geographical Features . . . . .	27
7. Temperature . . . . .	28
8. Seepage and Other Losses . . . . .	29
9. Bibliography . . . . .	31
<b>4. RIVER GAGING <i>by N. C. Grover and the late John C. Hoyt</i></b>	
1. Introduction . . . . .	32
2. Establishment of Gaging Stations . . . . .	33
3. Equipment of Station . . . . .	35
4. Measurements of Discharge . . . . .	39
5. Weir Method . . . . .	40
6. Velocity-area Method . . . . .	41
7. Slope Measurements . . . . .	41

CHAPTER	PAGE
8. Float Measurements . . . . .	42
9. Current-meter Measurements . . . . .	42
10. Current Meters and Accessory Equipment . . . . .	44
11. Rating of Current Meter . . . . .	46
12. Records of Stage . . . . .	46
13. Operation of Gaging Station . . . . .	47
14. Winter Records . . . . .	49
15. Computation of Daily Discharge . . . . .	49
16. Bibliography . . . . .	50
 5. ESTIMATING STREAM FLOW	
1. General . . . . .	51
2. Stream Gagings at the Site . . . . .	52
3. Extensions of Stream Gagings at the Site . . . . .	53
4. No Stream Gagings at the Site . . . . .	56
5. Storage and Pondage . . . . .	59
6. Bibliography . . . . .	59
 6. FLOOD FLOWS	
1. General . . . . .	60
2. Peak Flows . . . . .	61
3. Effect of Physical Characteristics of Watershed . . . . .	69
4. Flood-frequency Studies . . . . .	71
5. Physical Indications of Past Floods . . . . .	75
6. Storm Rainfall . . . . .	77
7. Storm Runoff—Volume in Flood . . . . .	78
8. The Shape of the Hydrograph . . . . .	78
9. Routing Floods . . . . .	79
10. Bibliography . . . . .	82
 7. INVESTIGATION OF SITES	
1. Scope . . . . .	84
2. General . . . . .	84
3. Extent of Investigation . . . . .	84
4. Reconnaissance . . . . .	84
5. Preliminary Investigation . . . . .	85
6. Final Investigation . . . . .	85
7. Choice of Location . . . . .	86
8. Topographic Mapping . . . . .	87
9. Geologic Investigations . . . . .	87
10. Subsurface Exploration . . . . .	88
11. Electrical Resistivity and Seismic Methods of Prospecting . . . . .	88
12. Wash Borings . . . . .	89
13. Churn Drilling . . . . .	89
14. Rotary Drilling through Overburden . . . . .	90
15. Undisturbed Sampling of Overburden . . . . .	90
16. Diamond Drilling . . . . .	91
17. Importance of Accurate Boring Data . . . . .	91
18. Large Drill Holes . . . . .	92

CHAPTER	XV PAGE
19. Rough Methods of Determining Suitability of Materials . . . . .	92
20. Bibliography . . . . .	94
<b>8. HYDRAULICS</b>	
1. Flow through Orifices and Short Tubes . . . . .	95
2. Discharge through Sluice Gates . . . . .	100
3. Loss of Head in Conduits . . . . .	100
4. Eddy Losses in Conduits . . . . .	100
5. Losses at Conduit Entrances . . . . .	100
6. Losses at Conduit Intakes . . . . .	101
7. Losses at Conduit Bends . . . . .	102
8. Losses at Conduit Valves . . . . .	105
9. Miscellaneous Conduit Losses . . . . .	106
10. Skin-friction Conduit Losses . . . . .	108
11. Flow over Dams . . . . .	118
12. Measuring Weirs . . . . .	128
13. Head by Bernoulli's Theorem . . . . .	129
14. Critical Gradients and the Hydraulic Jump . . . . .	132
15. The Hydraulic Bore and the Suction Wave in Open Channels . . . . .	137
16. Varied Flow . . . . .	140
17. Hydraulic Models and Similitude . . . . .	144
18. The Flow Net . . . . .	147
19. Bibliography . . . . .	148
<b>9. HEAD, POWER, AND EFFICIENCY</b>	
1. Head . . . . .	151
2. Energy, Work, and Power . . . . .	153
3. Determination of True Output and Average Power . . . . .	154
4. Efficiency of Apparatus . . . . .	156
5. Effect of Number of Units on Plant Efficiency . . . . .	159
6. Average Over-all Plant Efficiency . . . . .	160
<b>10. PONDAGE AND STORAGE</b>	
1. Pondage . . . . .	162
2. Effect of Pondage on Plant Capacity . . . . .	162
3. Flow Demand . . . . .	165
4. Studies Involving Pondage, Storage, and Output . . . . .	166
5. Storage . . . . .	166
6. Silt Deposits in Reservoirs . . . . .	167
7. Benefits from Storage . . . . .	167
8. Tabulating Stream Flow . . . . .	172
9. The Hydrograph . . . . .	172
10. The Mass Curve . . . . .	177
11. The Flow Duration Curve . . . . .	180
12. Analytical Methods Applied to Storage Studies . . . . .	183
13. Functions of Storage in Combined Systems . . . . .	187
14. Bibliography . . . . .	190

## 11. TYPES OF HYDRO PLANTS

1. Introduction . . . . .	191
2. Run-of-river Plants without Pondage . . . . .	191
3. Base-load Hydro Plants . . . . .	191
4. Run-of-river Hydro Plants with Pondage . . . . .	191
5. Reservoir Plants . . . . .	195
6. Peak-load Hydro Plants . . . . .	200
7. Pumped Storage Plants for Peak Loads . . . . .	200
8. Successful Pumped Storage Hydro Plants . . . . .	204
9. Special Application of Peak-load Hydro Plants to Systems with Sharp Peaks . . . . .	205
10. Functions of Peak-load Hydro Plants . . . . .	205
11. Bibliography . . . . .	206

## 12. COST OF STEAM POWER

1. General . . . . .	207
2. Improvement in Steam Plants . . . . .	207
3. Capital Cost of Steam Plants . . . . .	207
4. Fixed Charges on Steam Plants . . . . .	208
5. Cost of Money . . . . .	208
6. Taxes and Insurance . . . . .	210
7. Depreciation and Obsolescence . . . . .	211
8. Capacity Factor . . . . .	214
9. Actual Capacity Factor of Power Plants . . . . .	214
10. Decline in Annual Capacity Factor of Steam Plants . . . . .	214
11. Operating Costs of Steam Plants . . . . .	216
12. Fixed and Variable Cost of Operating . . . . .	217
13. Actual Annual Costs at Steam Plants . . . . .	218
14. Effect of Fuel Cost on Cost of Steam Power . . . . .	219
15. Fuel Oil and Gas Equivalent of Coal . . . . .	220
16. Bibliography . . . . .	221

## 13. COST OF HYDRO POWER

1. Capital Cost of Hydroelectric Plants . . . . .	222
2. Increment Cost of Hydro Installation . . . . .	226
3. Effect of Increment Unit Cost of Installation on Total Cost of Project . . . . .	227
4. Cost of Bridgeport Hydro Plant . . . . .	228
5. Transmission Cost . . . . .	229
6. Transmission Liability against Hydro Projects . . . . .	232
7. Useful Life of Hydro Developments . . . . .	233
8. Annual Depreciation for Hydro Plants . . . . .	233
9. Taxes and Insurance on Hydro Plants . . . . .	236
10. Cost of Money for Hydro Plants . . . . .	237
11. Annual Fixed Charges on Hydro Plants . . . . .	238
12. Annual Operation and Maintenance Cost at Hydro Plants . . . . .	238
13. Total Annual Cost of Hydro Developments . . . . .	239
14. Total Cost of Power at Bridgeport Hydro Project . . . . .	241
15. Bibliography . . . . .	242

14. MARKET REQUIREMENTS AND LOAD STUDIES

1. General . . . . .	244
2. Load Factor . . . . .	244
3. Load Curves . . . . .	245
4. Relation of Monthly Peaks to Annual Peak Load . . . . .	247
5. Different Classes of Load . . . . .	248
6. Weekly Load Curves . . . . .	249
7. Application of Weekly Load Curve to Hydro Studies . . . . .	250
8. Effect of Interconnection . . . . .	252
9. Load Duration Curves . . . . .	254
10. Peak Percentage Curves . . . . .	255
11. Reserve Capacity . . . . .	256
12. Hydro Units as Reserve Capacity . . . . .	257
13. Limitations on Hydro Capacity as Reserve . . . . .	258
14. Load Prediction . . . . .	258
15. Bibliography . . . . .	260

15. CAPACITY OF THE DEVELOPMENT AND ECONOMIC ADVISABILITY OF HYDRO

1. General . . . . .	261
2. Economic Hydro Ratio of a Power System . . . . .	261
3. Firm Capacity of Hydro Plants . . . . .	261
4. Capacity of the Development . . . . .	262
5. Effect of Future Changes in Load Factor . . . . .	265
6. Hydro Plants as an Exclusive Source of Power . . . . .	265
7. Effect of Interconnection on Feasibility . . . . .	265
8. Component Parts of Value of Hydro Power . . . . .	265
9. Capacity Value . . . . .	266
10. Energy Value . . . . .	266
11. Conditions under Which Value of Steam and Hydro Energy Are the Same . . . . .	266
12. Conditions under Which Annual Capacity Factor of Hydro Re- mains Constant . . . . .	267
13. Conditions under Which Annual Capacity Factor of Steam Plant Declines . . . . .	267
14. Effect of Capacity Factor on Comparative Value of Hydro Energy . . . . .	267
15. Importance of Increment Cost of Hydro . . . . .	268
16. Comparative Total Cost of Hydro and Steam Energy . . . . .	269
17. Economic Analysis of a Typical Hydro Project . . . . .	272
18. Estimates of Total Annual Cost of Power Supply . . . . .	274
19. Economic Advisability of Bridgeport Hydro Project . . . . .	275
20. Peak-load Hydro Plants to Supersede Old Steam Plants . . . . .	278
21. Net Return on Investment in Pumped Storage Hydro Plants Su- perseding Old Steam Plants . . . . .	278
22. Bibliography . . . . .	280

16. REPORTS

1. Introduction . . . . .	282
2. Purpose of Reports . . . . .	282
3. Extent of the Report . . . . .	283

CHAPTER	PAGE
4. Annual Depreciation . . . . .	283
5. Accrued Depreciation . . . . .	284
6. Legal Requirements . . . . .	285
7. Rate of Return . . . . .	286
8. Values for Future Development . . . . .	286
9. Estimates of Cost . . . . .	287
10. Arrangement and Wording of Report . . . . .	300
11. Subject Matter of Reports . . . . .	301
12. Outline of the Report . . . . .	302
13. Records and Check Lists for Reports . . . . .	303
14. Bibliography . . . . .	312

### DAMS—DESIGN AND CONSTRUCTION

#### 17. SOLID GRAVITY CONCRETE DAMS

##### A. General

1. Introduction . . . . .	317
2. The Choice of Solid Gravity Concrete Dams . . . . .	317
3. Nomenclature . . . . .	318

##### B. Forces Acting on Dams

4. The Forces Considered in Design . . . . .	319
5. External Water Pressure . . . . .	319
6. Subatmospheric Effects . . . . .	322
7. Uplift . . . . .	322
8. Ice Pressure . . . . .	325
9. Earth and Silt Pressures . . . . .	327
10. Wave Heights . . . . .	328
11. Tides, Setup, and Seiches . . . . .	329
12. The Weight of the Dam . . . . .	330
13. The Weight of the Foundation . . . . .	330
14. Earthquake Forces . . . . .	330
15. Vertical Reaction of the Foundation . . . . .	333
16. Horizontal Foundation Reactions . . . . .	337

##### C. Requirements for Stability

17. Causes of Failure . . . . .	337
18. Rule 1. Location of the Resultant . . . . .	338
19. Rule 2. Resistance to Sliding . . . . .	338
20. Rule 3. Compressive Stresses . . . . .	341
21. Rule 4. Tension on Interior Planes . . . . .	344
22. Rule 5. Margin of Safety . . . . .	344
23. Rule 6. Design and Construction . . . . .	345

##### D. General Procedure of Design

24. General Considerations . . . . .	345
--------------------------------------	-----

##### E. Solid Gravity Non-overflow Dams

25. Multiple-step Design . . . . .	347
26. Single-step Design . . . . .	349

# CONTENTS

CHAPTER	PAGE
27. Basic Equations for Single-step Design . . . . .	352
28. Example 3. 200-ft Non-overflow Solid Gravity Dam . . . . .	352
29. Example 4. 350-ft Non-overflow Solid Gravity Dam . . . . .	357
30. Notable Non-overflow Solid Gravity Dams . . . . .	358
31. Approximate Quantities in Non-overflow Solid Gravity Dams . . . . .	358
<b>F. Solid Gravity Spillway Dams</b>	
32. Methods of Design . . . . .	359
33. The Shape of the Crest . . . . .	360
34. The Bucket . . . . .	365
35. Application of the Single-step Design to Spillway Dams . . . . .	367
36. Basic Equations for Single-step Design . . . . .	367
37. Example 5. 100-ft Spillway Gravity Dam . . . . .	368
38. Example 6. 20-ft Spillway Dam . . . . .	370
39. Ice on Controlled Crests . . . . .	372
40. Approximate Quantities for Spillway Gravity Dams . . . . .	372
<b>G. Concrete for Dams</b>	
41. General . . . . .	372
42. Cement . . . . .	372
43. Fine Aggregate . . . . .	373
44. Coarse Aggregate . . . . .	373
45. Water . . . . .	373
46. Admixtures . . . . .	373
47. Concrete Mixes . . . . .	374
48. Batching and Mixing . . . . .	374
49. Transportation and Placing . . . . .	374
50. Forms and Formed Surfaces . . . . .	375
51. Height of Lifts . . . . .	376
52. Curing and Protection . . . . .	376
53. Joints—Horizontal and Vertical . . . . .	377
54. Temperature Control, Cracking . . . . .	377
55. Waterproofing . . . . .	377
56. Tests of Concrete and Concrete Materials . . . . .	378
57. Bibliography . . . . .	378
<b>18. ARCH DAMS</b>	
1. Types of Arch Dams . . . . .	379
2. Nomenclature . . . . .	380
3. Cylinder Method . . . . .	380
4. Elastic Arch Method . . . . .	381
5. Comparison of Cylinder and Elastic Methods . . . . .	383
6. Trial-load Method . . . . .	383
7. Model Tests . . . . .	383
8. The Central Angle . . . . .	383
9. The Minimum Thickness of Dam . . . . .	384
9A. Temperature Stresses . . . . .	384
10. Design of Constant-angle Arch Dams . . . . .	385
11. Explanatory Example . . . . .	386
12. Conditions at the Abutment . . . . .	388

CHAPTER	PAGE
13. Earthquakes . . . . .	392
14. Spillway Arch Dams . . . . .	392
15. Ice Thrust . . . . .	392
16. Example . . . . .	392
17. Bibliography . . . . .	393
<b>19. BUTTRESSED CONCRETE DAMS (Including Flat-slab, Multiple-arch, and Round-head Buttress Type of Dams)</b>	
1. Description . . . . .	394
2. Advantages and Disadvantages . . . . .	394
3. General Design . . . . .	397
4. Uplift . . . . .	397
5. Cutoffs and Seepage . . . . .	397
6. The Upstream Deck . . . . .	397
7. The Downstream Apron . . . . .	399
8. The Buttresses . . . . .	399
9. Allowed Stresses . . . . .	403
10. Bibliography . . . . .	403
<b>20. EARTH DAMS—GENERAL PRINCIPLES OF DESIGN</b>	
1. Introduction . . . . .	405
2. General . . . . .	405
3. Advantages and Limitations of Earth Dams . . . . .	405
4. Foundations . . . . .	406
5. Materials of Construction . . . . .	406
6. Design to Suit Available Materials . . . . .	407
7. Suitable Design with a Sand Gravel Material . . . . .	407
8. Suitable Design with Clayey Silt and Coarse Sand Materials . . . . .	408
9. Suitable Design with Clayey Silt and Coarse Sand Materials for an Impervious Foundation . . . . .	408
10. Suitable Design with Sand Gravel and Clayey Silt Materials for a Highly Pervious Foundation . . . . .	409
11. Suitable Design with Silty Clay Materials for an Unconsolidated Clay Foundation . . . . .	409
12. Requirements for the Safety of Earth Dams . . . . .	410
13. Safety against Overtopping . . . . .	410
14. Seepage . . . . .	411
15. Position of the Seepage Line . . . . .	411
16. Quantity of Seepage . . . . .	413
17. Drainage in Earth Dams . . . . .	414
18. Effect of Drainage on the Seepage Line . . . . .	415
19. Pipe Drains . . . . .	416
20. Filters for Earth Dams . . . . .	416
21. Position of Filters and Drains . . . . .	418
22. Core Walls and Cutoff Walls . . . . .	418
23. Steel Sheet Piling Cutoff . . . . .	419
24. Partial Cutoff . . . . .	419
25. Upstream Blankets . . . . .	419
26. Flotation Gradient and Quicksand . . . . .	419
