

CONTENTS

	Page
INTRODUCTION	1
OVERVIEW	2
Viability	2
History	5
Types of Wind Energy Collectors	10
Future Potential	17
Applications	19
Siting	23
Performance	30
System Design	37
SYNTHESIS OF NATIONAL WIND ENERGY ASSESSMENTS	43
Technique for Estimating wind Power	44
Types of Wind Data Sets and Summaries Available	45
Generic Factors to consider	47
Review of the Existing National Wind Energy Assessments	54
Refined Analyses of National Wind Power	60
Conclusions	65
Recommendations	66
References	68
ROTOR DEVELOPMENT	70
ERDA/NASA Large Experimental Wind Turbines	70
Segmented and Self-Adjusting Rotors	89
Composite Bearingless Rotor Control	91
Optimization and Characteristics of a Sailwing Windmill Rotor	100
References	114
INNOVATIVE WIND TURBINES	116
Darrieus Turbines	116
Diffuser-Augmented Wind Turbines	133
Vortex Augmentor Concept	141
Electrofluid Dynamic Generator	151
Circulation Controlled Vertical Axis Panemones	155
References	156
APPLICATION TO ELECTRIC UTILITIES	159
Electrical Technology	159
Role of Wind Power in electric Utilities	166
Hydrostorage	173
General Electric Design Study of Wind Turbines for Electric Utilities	175
Kaman Aerospace Design Study of Wind Turbines for Electric Utilities	204
References	256
FARM AND RURAL USE SYSTEMS	259
Wind Powered Hydrogen Electric Systems	259
The University of Massachusetts Wind Furnace Project	308
Wind Powered Aeration for Remote Locations	311
References	313
LEGAL, SOCIAL AND ENVIRONMENTAL ISSUES	315
Legal-Institutional Implications of Wind Energy Systems	315

Pilot Study on Public Reactions to Wind Energy Devices	317
Evaluation of the Potential Environmental Effects of Wind Energy System Development	319
