Part 1: Micro-applications and Micro-systems

| | | |
|------------------|---|-----------|
| Chapter 1 | Printed Enzymatic Current Sources | 5 |
| | <i>Matti Valkiainen, Saara Tuurala, Maria Smolander and Otto-Ville Kaukoniemi</i> | |
| 1.1 | Introduction | 5 |
| 1.2 | Enzyme Catalysts in Fuel Cells | 6 |
| 1.3 | Enzyme-based Microsystems for Power Production | 8 |
| 1.3.1 | Biofuel Cells Constructed in a Liquid Chamber | 8 |
| 1.3.2 | Miniature Membraneless Biofuel Cells | 11 |
| 1.3.3 | Biofuel Cell Constructions Suitable for Large-scale Production | 11 |
| 1.4 | Printing Processes as Manufacturing Methods for Power Sources | 15 |
| 1.4.1 | Types of Thin and Printable Power Sources | 17 |
| 1.5 | Enzymes in Mass-production Applications | 17 |
| 1.6 | Printing and Coating of Enzymes | 19 |
| 1.6.1 | Screen Printing | 19 |
| 1.6.2 | Inkjet Printing | 20 |
| 1.7 | Printed Biofuel Cells | 21 |
| 1.8 | Conclusions | 24 |
| | References | 25 |
| Chapter 2 | Potential of Multilayer Ceramics for Micro Fuel Cells | 28 |
| | <i>Michael Stelter</i> | |
| 2.1 | Challenges of Micro Fuel Cell System Development | 28 |
| 2.1.1 | Cost of Assembly | 29 |

| | | |
|-------|--|----|
| 2.1.2 | Component Failures | 29 |
| 2.2 | Introduction to Multilayer Ceramics | 29 |
| 2.3 | Fuel Cell Relevant Subsystems and Geometries | 30 |
| 2.3.1 | Geometrical Shaping | 30 |
| 2.3.2 | Relevant Features of Fuel Cells | 32 |
| 2.4 | Examples | 36 |
| 2.5 | Conclusion | 38 |

Part 2: High-Temperature Polymer Electrolyte Fuel Cells

| | | |
|------------------|--|-----------|
| Chapter 3 | Trends in High-Temperature Polymer Electrolyte Fuel Cells | 45 |
| | <i>Werner Lehnert, Christoph Wannek and Roswitha Zeis</i> | |
| 3.1 | Introduction | 45 |
| 3.2 | The Oxygen Reduction Reaction | 46 |
| 3.2.1 | Tafel Slope and Reaction Pathway | 46 |
| 3.2.2 | The Adsorption of Phosphoric Acid Molecules and Phosphate Anions on Platinum | 49 |
| 3.2.3 | Enhanced ORR Activity: Platinum Alloy Catalysts and Alternative Electrolytes | 53 |
| 3.3 | Membrane Polymers | 54 |
| 3.4 | Catalyst and Diffusion Layer Development and Membrane Electrode Assembly Manufacture | 58 |
| 3.5 | Fuel Cell Performance and Durability | 61 |
| 3.6 | Stacks | 66 |
| 3.7 | Perspectives | 69 |
| | References | 70 |
| Chapter 4 | Large Auxiliary Power Units for Vessels and Airplanes | 76 |
| | <i>Ralf Peters and Andreas Westenberger</i> | |
| 4.1 | Introduction | 76 |
| 4.2 | Motivation | 77 |
| 4.3 | Conditions for Auxiliary Power Unit Operation | 82 |
| 4.3.1 | Aeronautical Applications | 82 |
| 4.3.2 | Maritime Applications | 86 |
| 4.4 | Fuel Cell Technologies | 87 |
| 4.4.1 | Fuel Cell Types and their Applicability for Large Auxiliary Power Unit Systems | 87 |
| 4.4.2 | Fuels for Large Auxiliary Power Units | 93 |
| 4.4.3 | Fuel Processors | 100 |
| 4.4.4 | Fuel Cell Systems | 101 |
| 4.5 | System Evaluation | 112 |
| 4.5.1 | Focus on Aeronautical Systems | 113 |
| 4.5.2 | Focus on Maritime Systems | 136 |

| | | |
|-----|-----------------|-----|
| 4.6 | Conclusions | 140 |
| | Acknowledgement | 143 |
| | References | 143 |

Part 3: Novel Fuels

| | | |
|------------------|---|------------|
| Chapter 5 | Going Beyond Hydrogen: Non-hydrogen Fuels, Re-oxidation and Impurity Effects on Solid Oxide Fuel Cell Anodes | 153 |
| | <i>Mark Cassidy, Jan Pieter Ouweltjes and Nico Dekker</i> | |

| | | |
|-------|---|-----|
| 5.1 | Introduction | 153 |
| 5.2 | Carbonaceous Fuels | 157 |
| 5.2.1 | Fuel Resources and Processing Options | 157 |
| 5.2.2 | Conventional Solid Oxide Fuel Cell Anodes | 159 |
| 5.2.3 | Improved Anodes | 168 |
| 5.3 | Other Alternatives to Hydrogen | 177 |
| 5.3.1 | Ammonia | 177 |
| 5.3.2 | Hydrogen sulfide | 178 |
| | References | 179 |

| | | |
|------------------|---|------------|
| Chapter 6 | Direct Carbon Fuel Cells | 190 |
| | <i>P. Desclaux, S. Nürnberger and U. Stimming</i> | |

| | | |
|-------|---|-----|
| 6.1 | Electrochemical Oxidation of Carbon | 190 |
| 6.1.1 | Thermodynamics | 191 |
| 6.1.2 | Mechanism | 192 |
| 6.1.3 | Boudouard Reaction | 193 |
| 6.2 | Different Types of Direct Carbon Fuel Cells | 193 |
| 6.2.1 | Molten Carbonate Electrolyte | 194 |
| 6.2.2 | Molten Hydroxide Electrolyte | 196 |
| 6.2.3 | Solid Oxide Electrolyte | 198 |
| 6.2.4 | Other Concepts | 200 |
| 6.3 | Comparison of Different Carbon Fuels | 207 |
| 6.4 | Conclusions | 209 |
| | References | 210 |

Part 4: Modelling and Lifetime Prediction

| | | |
|------------------|--|------------|
| Chapter 7 | Integrating Degradation into Fuel Cell Models and Lifetime Prediction | 217 |
| | <i>Andreas Gubner</i> | |

| | | |
|-----|--|-----|
| 7.1 | Introduction | 217 |
| 7.2 | Background | 218 |
| 7.3 | Basic Solid Oxide Fuel Cell Modelling Theory | 220 |
| 7.4 | Calculations and Results | 227 |

| | | |
|-------|--|-----|
| 7.4.1 | Determining the Area Specific Resistance | 227 |
| 7.4.2 | Experimental Validation | 228 |
| 7.4.3 | Simulation of the Current–Voltage Behaviour | 231 |
| 7.5 | Degradation Monitoring by Area Specific Resistance Simulation | 234 |
| 7.6 | Extensions of the Model | 236 |
| 7.7 | A Simple Lifetime Prediction Model | 237 |
| 7.7.1 | Some Literature Results | 237 |
| 7.7.2 | Development of a Non-linear Area Specific Resistance Over Time Behaviour | 238 |
| 7.8 | Calculations | 241 |
| 7.8.1 | Constant Current Density | 241 |
| 7.8.2 | Varying Local Current Density and Fuel Utilisation Influence | 242 |
| 7.8.3 | Change of Local Current Density and Area Specific Resistance Profile over Time | 244 |
| 7.9 | Conclusions | 245 |
| 7.10 | List of Symbols Used in this Chapter | 245 |
| | Acknowledgements | 247 |
| | References | 247 |

Chapter 8 Accelerated Lifetime Testing for Phosphoric Acid Fuel Cells **249**
John Donahue, Ned Cipollini and Robert Fredley

| | | |
|-------|---|-----|
| 8.1 | Introduction | 249 |
| 8.2 | Background | 249 |
| 8.3 | Experimental Design | 253 |
| 8.4 | Testing | 254 |
| 8.4.1 | First Generation Testing: Pot Tests and Corrosion Potential Measurement | 254 |
| 8.4.2 | Second Generation Testing: Potential Control and Monitor Current | 256 |
| 8.4.3 | Third Generation Testing: Inter-cell Effects | 258 |
| 8.5 | Conclusions | 260 |
| | Acknowledgements | 261 |
| | References | 261 |

Part 5: Hydrogen Generation and Reversible Fuel Cells

Chapter 9 Electrolysis Using Fuel Cell Technology **267**
A. Brisse, J. Schefold, C. Stoots and J. O'Brien

| | | |
|-------|------------------------------|-----|
| 9.1 | Introduction | 267 |
| 9.2 | Low-temperature Electrolysis | 269 |
| 9.2.1 | Introduction | 269 |
| 9.2.2 | Commercial Systems | 270 |

| | |
|--|------------|
| <i>Contents</i> | xv |
| 9.2.3 Performance | 270 |
| 9.2.4 Development Issues | 271 |
| 9.3 High-temperature Steam Electrolysis | 271 |
| 9.3.1 Introduction | 271 |
| 9.3.2 Solid Oxide Electrolyser Cells | 273 |
| 9.3.3 High-temperature Electrolyser Stacks | 279 |
| 9.3.4 System Development | 280 |
| 9.3.5 Summary | 282 |
| References | 283 |
| | |
| Chapter 10 Hydrogen Production by Internal Reforming Fuel Cells | 287 |
| <i>Kas Hemmes</i> | |
| 10.1 Introduction | 287 |
| 10.2 International Developments Reported in Literature | 289 |
| 10.3 Co-production of Hydrogen and Power | 290 |
| 10.3.1 Mode 1: High-efficiency Mode | 293 |
| 10.3.2 Mode 2: Constant-current Mode | 294 |
| 10.3.3 Mode 3: High-power Mode or Constant (Low) Voltage Mode | 295 |
| 10.4 The ‘Superwind Concept’ | 298 |
| 10.5 Hydrogen Production from Carbon Using a Direct Carbon Fuel Cell | 300 |
| 10.6 Conclusions | 303 |
| References | 304 |
| | |
| Part 6: Outlook | |
| | |
| Chapter 11 Products, not Technology: Some Thoughts on Market Introduction Processes | 311 |
| <i>Robert Steinberger-Wilckens</i> | |
| 11.1 Introduction | 311 |
| 11.2 Background | 312 |
| 11.3 Technology Phasing-in versus Disruptive Development | 312 |
| 11.4 Battling Incumbent Technology | 317 |
| 11.5 Paradigm Shifts and Succession of Generations | 318 |
| 11.6 Transforming Technology into Products | 320 |
| 11.7 Added Value, Special Markets and Allowable Cost | 323 |
| 11.8 Outlook | 330 |
| Acknowledgements | 331 |
| References | 331 |
| | |
| Subject Index | 333 |
