	Page
Recombination in Solar Cells : Theoretical Aspects	1
1. Introduction	1
2. Conventions Usually Made for p-n Junctions and Solar Cells	2
3. Three Laws of Photovoltaics	2
4. Maximum Power, Recombination and the Ideality Factor	11
5. Junction Currents as Recombination Currents	14
6. Steady-State Recombination Rates at Given Plane X	17
7. Junction Model and Space-Dependences	21
8. Transition Region Recombination Current Density	27
9. The Bulk-Regions Recombination Current Density	33
10. Summary of p-n Junction Current Densities from Sections 8 and 9	37
11. Configuration and Electrostatics of the Schottky Barrier Solar Cell	39
12. The Place of Recombination Effects in (p-type) Schottky Barrier Solar Cells	44
13. Recombination Currents and Voltage Drops in (p-type) Schottky Barrier Solar Cells	48
14. Conclusion	54
 A Few More General Topics	
(I) Thermodynamic Efficiency	55
(II) Simple Theory to See that an Optimum Energy Gap Exists	57
(III) Is Dollars per Peak Watt a Good Unit?	57
(IV) Energy Unit for Global Use	58
(V) When will Solar Conversion be Economically Viable?	61
 Appendix	62
References	63
 Schottky Barrier Solar Cells	67
1. Introduction	67
 2. The Schottky Barrier Cell Principle	68
2.1 Principle of SBSC Operation	70
2.2 Current Transport Mechanism in Schottky Barriers	72
2.3 Effect of the MIS Potential Distribution upon the Diode Quality Factor n	78
2.4 The MIS SBSC under Illumination	79
2.5 The Minority Carrier MIS SB Cell	82
 3. Solar Cell Parameters and Design Considerations	87
3.1 Metal-Semiconductor Barrier Height	87
3.2 Diode Quality Factor n	88
3.3 Interfacial Oxide Thickness	89
3.4 Transmission Properties of the Metal	91
3.5 Spectral Response	92
3.6 Substrate Resistivity	94
3.7 Substrate Thickness	94
3.8 Series Resistance	95
 4. Results and Discussion of Typical Silicon MIS Cells	97
4.1 Open Circuit Voltage	97
4.2 Short Circuit Current Density	98
4.3 Fill Factor	101

4.4	Efficiency	102
4.5	The Min MIS Cell	103
4.6	The MIS Inversion Layer Cell	106
4.7	Stability of MIS Solar Cells	107
4.8	The Future for MIS Cell – Cheaper Substrates ?	112

CdS – Cu_xS Thin Film Solar Cells		117
1.	Introduction	117
2.	CdS Thin Film Technology	119
2.1	Vacuum Vapor Deposition of CdS Films	119
2.2	Sputtering	122
2.3	Spray Deposition	122
2.4	Sintering	123
3.	Cu _x S Thin Film Technology	124
3.1	Dipping Process (Wet Process)	124
3.2	Evaporation of CuCl	125
3.3	Evaporation of Cu _x S	125
3.4	Sputtering of Cu _x S	126
4.	Properties of the CdS Layer	127
4.1	Crystallography and Grain Size of CdS Films	127
4.2	Optical Properties of the CdS Films	129
4.3	Luminescence	130
4.4	Electrical Properties of CdS Films	131
5.	Properties of Cu _x S Films	131
5.1	Stoichiometry	131
5.2	Coulometric Titration	132
5.3	Optical Properties	133
5.4	Electrical Properties	135
6.	Properties of the Heterojunction	135
6.1	Structure of the Heterojunction	135
6.2	Surface Effects of the Cu _x S Film	139
6.3	Capacitance Measurements	140
6.4	Diffusion Length in Cu _x S and CdS	143
6.5	Spectral Response	146
6.6	Band Diagram	147
7.	Technology of CdS- Cu _x S Photovoltaic Generators	147
7.1	Cell Structures	148
7.2	Fabrication Process of CdS-Cu _x S Cells	149
8.	Performance Characteristics of Solar Cells and Generators	152
