

CONTENTS

	Page
Introduction	1
REFERENCE MATERIALS	
Reference Materials for Insulation Measurement Comparisons	7
Fibrous Insulating Materials as Standard Reference Materials at Low Temperatures	30
An Interlaboratory Comparison of the ASTM C 335 Pipe Insulation Test	50
Does the Insulation Have a Thermal Conductivity? The Revised ASTM Test Standards Require an Answer	60
MATERIALS AND STRUCTURES	
Natural Convective Heat Transfer in Permeable Insulation	73
Blown Cellulose Fiber Thermal Insulations : Part 1 – Density of Cellulose Fiber Thermal Insulation in Horizontal Applications	82
Blown Cellulose Fiber Thermal Insulations : Part 2 – Thermal Resistance	104
Measurement of the Thermal Resistance of Thick Low-Density Mineral Fiber Insulation	130
LINE SOURCE METHODS FOR INSULATIONS	
Analysis of the Applicability of the Hot-Wire Technique for Determination of the Thermal Conductivity of Diathermanous Materials	147
Thermal Conductivity Measurements on High-Temperature Fibrous Insulations by the Hot – Wire Method	154
Thermal Conductivity of Refractories : Working with the Hot – Wire Method	
Determination of the Thermal Conductivity of Refractory Insulating Materials by the Hot – Wire Method	172
Determination of the Thermal Conductivity of Refractory Insulating Materials by the Hot – Wire Method	186
PARAMETERS AFFECTING THERMAL PERFORMANCE	
Heat Transfer Versus Pitch Angle for Nonventilated, Triangular-Sectioned, Apex-Upward Air-Filled Spaces	203
Influence of Moisture and Moisture Gradients on Heat Transfer Through Porous Building Materials	211
Laboratory and Field Investigations of Moisture Absorption and Its Effect on Thermal Performance of Various Insulations	234
HEAT TRANSMISSION MODELS AND MEASUREMENTS	
Light Transmission Measurements Through Glass Fiber Insulations	263
Fibrous Insulation Heat – Transfer Model	281
Heat Transfer in Refractory Fiber Insulations	293
Pipe Insulation Testers	310
SYSTEMS EVALUATION	
A Calibrated/Guarded Hot – Box Test Facility	329
New High-Temperature Guarded Hot-Box Facility for Reflective Insulation	342
A Calibrated Hot-Box Approach for Steady-State Heat-Transfer Measurements in Air Duct Systems	357
Evaluation of High-Temperature Pipe Insulations Using a 16-In.-Diameter Pipe Test Apparatus	374
OTHER PARAMETERS AND MEASUREMENTS	
Forced Convection : Practical Thermal Conductivity in an Insulated Structure Under the Influence of Workmanship and Wind	409

Draft Measurement Technique Applied to Poor Conductors 426
