<b>PART I</b>	<b>UNDAMENTALS</b>	<b>1</b>
<b>1</b>	<b>UNITS</b>	<b>1</b>
1-1	Systems of Units	1
1-2	Metric Systems	2
1-3	Getting used to SI	2
1-4	Features of SI	3
1-5	Base and Derived Units of the SI	3
1-6	Definitions of Base Units	3
1-7	Definitions of Derived Units	4
1-8	Multiples and submultiples of SI units	7
1-9	Commonly-used units	7
1-10	Conversion charts and their use	7
	Questions and Problems	10
<b>2</b>	<b>FUNDAMENTALS OF ELECTRICITY AND MAGNETISM</b>	<b>11</b>
2-1	Conventional and electron current flow	11
2-2	Distinction between sources and loads	12
2-3	Sign notation for voltages	12
2-4	Graph of an alternating voltage	13
2-5	Positive and negative currents	13
2-6	Another notation for voltages	14
2-7	Potential level	15
2-8	Faraday's law of electromagnetic induction	17
2-9	Voltage induced in a conductor	18
2-10	Voltage induced in a rectangular conductor	18
2-11	Curve of induced voltage as a function of time	19
2-12	Cycle and frequency	20
2-13	Alternator having a revolving coil	20
2-14	Direct current generator	20
2-15	Improving the waveshape	21
2-16	Difference between an alternator and a dc generator	21
2-17	Magnetic circuit	22
2-18	Ampere's Circuital Law	23
2-19	Changing the reluctance of a magnetic circuit	23
2-20	Magnetic field intensity H, flux density B	23
2-21	B-H curve of a vacuum	24
2-22	B-H curve of a magnetic material	24
2-23	Determining the relative permeability	25
2-24	Solution of simple magnetic circuits	26
2-25	Lorentz force on a conductor	27
2-26	Direction of the force acting on a straight conductor	27
	Questions and Problems	28
<b>3</b>	<b>FUNDAMENTALS OF MECHANICS AND HEAT</b>	<b>31</b>
3-1	Force	31
3-2	Torque	31
3-3	Mechanical work	32
3-4	Power	32
3-5	Power of a motor	33
3-6	Transformation of energy	34
3-7	Efficiency of a machine	34
3-8	Kinetic energy of linear motion	35

3-9	Kinetic energy of rotation, moment of inertia	35
3-10	Torque, inertia and change in speed	37
3-11	Speed of a motor/load system	37
3-12	Power flow in a mechanically coupled system	38
3-13	Motor driving a load possessing inertia	39
3-14	Electric motors driving linear motion loads	39
3-15	Heat and temperature	40
3-16	Temperature scales	41
3-17	Heat required to raise the temperature of a body	41
3-18	Transmission of heat	42
3-19	Heat transfer by conduction	42
3-20	Heat transfer by convection	43
3-21	Calculating losses by convection	43
3-22	Heat transfer by radiation	44
3-23	Calculating radiation losses	44
	Questions and Problems	45
<b>PART II ELECTRICAL MATERIALS</b>		<b>47</b>
<b>4</b>	<b>INSULATING MATERIALS</b>	<b>49</b>
4-1	Types of insulators	49
4-2	Solid insulators	51
4-3	Liquid insulators	51
4-4	Gaseous insulators	51
4-5	Deterioration of organic insulators	52
4-6	Life expectancy of electric equipment	52
4-7	Thermal classification of insulators	53
4-8	Electrical resistivity of insulators	53
4-9	Dielectric strength—Insulation breakdown	54
4-10	Ionization of a gas	56
4-11	Thermal conductivity	56
4-12	Lightning strokes	59
4-13	Lightning arrestors on buildings	59
4-14	Lightning and transmission lines	60
4-15	Basic impulse insulation level (BIL)	61
	Questions and Problems	63
<b>5</b>	<b>CONDUCTING MATERIALS, WIRE AND CABLE</b>	<b>64</b>
	<b>Electrical, Thermal and Mechanical Properties</b>	<b>64</b>
5-1	Good conductors	64
5-2	Resistive conductors	64
5-3	Conductor shapes	64
5-4	Round conductors	65
5-5	Mils, circular mils	67
5-6	Stranded cable	67
5-7	Square wires	67
5-8	Resistance of a conductor	68
5-9	Resistance as a function of temperature	70
5-10	Melting point	71
5-11	Fusing current	71
5-12	Fuses	71
5-13	Contact resistance	72
5-14	Nonlinear resistors	73
5-15	Thermistors	73
5-16	The varistor (Thyrite)	73
5-17	Resistance of the ground	73
5-18	Resistance between two electrodes	74
5-19	Measuring the resistance of a ground electrode	74
5-20	Resistance of liquid conductors, electrolytes	75

<b>Mechanical Properties of Conductors</b>		
5-21	Tractive force and elongation	76
5-22	Electric limit, yield strength and ultimate strength	77
<b>Conductor Insulation</b>		
5-23	Types of insulation	78
5-24	Thermal capacity of conductors	78
5-25	National Electrical Code and electrical installations	79
5-26	Comparison of various conductors	81
	Questions and Problems	84
<b>6</b>	<b>MAGNETIC MATERIALS AND PERMANENT MAGNETS</b>	<b>86</b>
6-1	B-H saturation curves	86
6-2	Saturation density	86
6-3	Other magnetic properties	87
6-4	Residual flux density and coercive force	87
6-5	Hysteresis loop	88
6-6	Hysteresis loss	89
6-7	Hysteresis losses caused by rotation	89
6-8	Eddy currents	90
6-9	Eddy currents in a stationary iron core	91
6-10	Eddy current losses in a revolving core	92
6-11	Total iron losses	92
6-12	Apparent power in iron	93
6-13	Hysteresis and permanent magnets	94
6-14	Magnetic energy stored in air	95
6-15	Magnetic energy in a magnetic material	95
6-16	Basic principle of a permanent magnet	95
6-17	Strength of a permanent magnet	96
6-18	B-H relationship	97
6-19	Energy product	99
6-20	Types of permanent magnets	99
6-21	Magnetizing and demagnetizing a magnet	100
6-22	Change of magnetic field with time, Curie point	100
6-23	Magnetic force of attraction	101
6-24	Converting mechanical energy into magnetic energy	101
	Questions and Problems	102
<b>PART III ALTERNATING CURRENT CIRCUITS</b>		<b>105</b>
<b>7</b>	<b>ALTERNATING VOLTAGES AND CURRENTS</b>	<b>107</b>
7-1	Sinusoidal voltage and current	107
7-2	Instantaneous power	108
7-3	Effective value of voltage and current	109
7-4	Determining the effective value of a voltage	110
7-5	Effective value of an ac current	112
7-6	Effective value of a sinusoidal current and voltage	112
7-7	Phasors	112
7-8	Harmonics	115
7-9	Fundamental power and harmonic power	116
7-10	Effective value of a distorted periodic wave	116
7-11	Distorted waves and ac circuits	117
7-12	Current in an inductor	117
7-13	Energy in an inductor	120
7-14	Some useful equations	120
	Questions and Problems	120
<b>8</b>	<b>ACTIVE, REACTIVE AND APPARENT POWER</b>	<b>123</b>
8-1	Apparent power	123
8-2	Active power	124
8-3	Definition of active sources and active loads	125

8-4	Reactive power	126
8-5	Reactive sources and reactive loads	127
8-6	The capacitor as a reactive loads	128
8-7	Distinction between active and reactive power	128
8-8	Combined active and reactive loads	129
8-9	Relationship between P, Q, S	130
8-10	Power factor	131
8-11	Systems comprising several loads	133
8-12	Reactive power without magnetic fields	134
8-13	Solving AC circuits	135
	Questions and Problems	136
<b>9</b>	<b>THREE-PHASE CIRCUITS</b>	<b>139</b>
9-1	Polyphase systems	139
9-2	Two-phase alternator	140
9-3	Power output of a 2-phase alternator	141
9-4	Three-phase alternator	141
9-5	Power output of a 3-phase alternator	142
9-6	Wye connection	143
9-7	Voltage relationships	144
9-8	Delta connection	146
9-9	Power transmitted by a 3-phase line	147
9-10	Solving 3-phase circuits	149
9-11	Indeterminate loads	150
9-12	Phase sequence	153
9-13	Determining the Phase sequence	155
9-14	Unbalanced 3-phase loads	155
	Questions and Problems	159
<b>10</b>	<b>ALTERNATING CURRENT INSTRUMENTS</b>	<b>161</b>
10-1	Alternating current ammeter	161
10-2	Alternating current voltmeter	162
10-3	AC voltmeter with rectifier	162
10-4	Wattmeter	163
10-5	Operation of the wattmeter	164
10-6	Power measurement in single-phase circuits	165
10-7	Power measurement in 3-phase, 3-wire circuits	165
10-8	Power measurement in 3-phase, 4-wire circuits	166
10-9	Measuring instantaneous power	166
10-10	Varmeter	167
10-11	Wathourmeter	167
10-12	Operation of the wathourmeter	169
10-13	Meter readout	169
10-14	Measuring three-phase energy and power	170
	Questions and Problems	170
<b>PART IV</b>	<b>TRANSFORMERS</b>	<b>173</b>
<b>11</b>	<b>TRANSFORMERS</b>	<b>175</b>
11-1	Voltage induced in a coil	175
11-2	Applied voltage and induced voltage	176
11-3	Elementary transformer	177
11-4	Polarity of a transformer	178
11-5	Properties of polarity marks	178
11-6	Ideal transformer at no-load—voltage ratio	178
11-7	Ideal transformer under load—current ratio	180
11-8	Circuit symbol for an ideal transformer	182
11-9	Impedance ratio	183
11-10	Shifting impedances from primary to secondary and vice-versa	184
11-11	Ideal transformer with an imperfect core	186
11-12	Elementary transformer under load	187

11-13	Primary and secondary leakage reactance	189
11-14	Equivalent circuit of a practical transformer	189
11-15	Construction of a power transformer	190
11-16	Losses, and nominal voltage, current and power	192
11-17	No-load saturation curve	192
11-18	Nominal impedance of a transformer	193
11-19	Per-unit impedance	193
11-20	Simplifying the equivalent circuit	195
11-21	Measuring transformer impedance	197
11-22	Standard terminal markings	200
11-23	Polarity tests	200
11-24	Transformer taps	201
11-25	Transformers in parallel	201
11-26	Cooling methods	203
	Questions and Problems	206
<b>12</b>	<b>SPECIAL TRANSFORMERS</b>	<b>209</b>
12-1	Dual-voltage distribution transformer	209
12-2	Autotransformer	210
12-3	Conventional transformer connected as an autotransformer	212
12-4	Potential transformers	213
12-5	Current transformers	214
12-6	Opening the secondary of a CT is dangerous	217
12-7	Toroidal current transformers	217
12-8	Variable autotransformer	218
12-9	High-impedance transformers	219
12-10	Induction heating transformers	221
	Questions and Problems	222
<b>13</b>	<b>THREE-PHASE TRANSFORMERS</b>	<b>224</b>
13-1	Basic properties of 3-phase transformer bands	224
13-2	Delta-delta connection	225
13-3	Delta-wye connection	226
13-4	Wye-delta connection	228
13-5	Wye-wye connection	228
13-6	Open-delta connection	228
13-7	Three-phase transformers	230
13-8	Step-up and step-down autotransformer	232
13-9	Phase-shift principle	233
13-10	Three-phase to 2-phase transformation	236
13-11	Phase-shift transformer	237
13-12	Voltage regulation	238
13-13	Polarity marking of 3-phase transformers	239
	Questions and Problems	240
<b>PART V</b>	<b>ROTATING MACHINERY</b>	<b>241</b>
<b>14</b>	<b>DIRECT CURRENT GENERATORS</b>	<b>243</b>
14-1	Field	244
14-2	Armature	244
14-3	Commutator and brushes	245
14-4	Lap winding	246
14-5	Induced voltage	248
14-6	Neutral zones	248
14-7	Multipole generators	249
14-8	Value of the induced voltage	250
14-9	Separately excited generator	251
14-10	No-load operation	251
14-11	Shunt generator	252
14-12	Controlling the voltage	252
14-13	Equivalent circuit	253

14-14	Generator under load	253
14-15	Compound generator	254
14-16	Differential compound generator	255
14-17	Load characteristics	256
14-18	Mechanical forces under load	256
14-19	Generator specifications	256
	Questions and Problems	257
<b>15</b>	<b>DIRECT CURRENT MOTORS</b>	<b>259</b>
15-1	Counter emf	259
15-2	Acceleration of the motor	260
15-3	Mechanical power and torque	261
15-4	Speed of rotation	263
15-5	Armature speed control	264
15-6	Field speed of control	265
15-7	Shunt motor under load	266
15-8	Series motor	267
15-9	Series motor speed control	268
15-10	Applications of the series motor	269
15-11	Compound motor	269
15-12	Reversing the direction of rotation	270
15-13	Starting a shunt motor	270
15-14	Face-plate starter	271
15-15	Stopping a motor	271
15-16	Dynamic braking	272
15-17	Plugging	272
15-18	Dynamic braking and mechanical time constant	274
15-19	Armature reaction	276
15-20	Direction of current flow in the armature	276
15-21	Flux distortion due to armature reaction	276
15-22	Commutating poles	277
15-23	Compensating winding	278
	Questions and Problems	278
<b>16</b>	<b>EFFICIENCY AND HEATING OF ELECTRICAL MACHINES</b>	<b>281</b>
16-1	Mechanical losses	281
16-2	Electrical losses	281
16-3	Losses as a function of load	283
16-4	Efficiency curve	284
16-5	Temperature rise	286
16-6	Limiting ambient temperature and hot-spot temperature and hot-spot temperature rise	286
16-7	Temperature rise by the resistance method	288
16-8	Relationship between the speed and size of a machine	289
	Questions and Problems	290
<b>17</b>	<b>THREE-PHASE INDUCTION MOTORS</b>	<b>292</b>
17-1	Principal components	292
17-2	Principle of the induction motor	297
17-3	The rotating field	298
17-4	Direction of rotation	300
17-5	Number of poles—Synchronous speed	301
17-6	Starting characteristics of a squirrel-cage motor	302
17-7	Acceleration of the rotor—slip	303
17-8	Motor under load	303
17-9	Slip	303
17-10	Voltage and frequency induced in the rotor	304
17-11	Characteristics of squirrel-cage induction motors	305
17-12	Calculation of approximate current	306
17-13	Active power flow	306

17-14	Torque versus speed curve	309
17-15	Effect of rotor resistance	310
17-16	Wound-rotor motor	310
17-17	Three-phase windings	313
17-18	Sector motor	320
17-19	Linear induction motor	320
17-20	Travelling waves	321
17-21	Properties of a linear induction motor	321
17-22	Magnetic levitation	322
	Questions and Problems	323
<b>18</b>	<b>SELECTION AND APPLICATION OF THREE-PHASE INDUCTION MOTORS</b>	<b>328</b>
18-1	Standardization and classification of induction motors	328
18-2	Classification according to environment and cooling methods	328
18-3	Classification according to electrical and mechanical properties	330
18-4	Motor size	331
18-5	Choice of motor speed	332
18-6	Two-speed motors	332
18-7	Plugging an induction motor	334
18-8	Effect of inertia	335
18-9	Braking with direct current	336
18-10	Abnormal conditions	336
18-11	Mechanical overload	337
18-12	Line voltage changes	337
18-13	Single-phasing	337
18-14	Frequency variation	337
18-15	Complete torque-speed characteristic under load	338
18-16	Induction motor operating as a generator	340
18-17	Frequency converter	342
18-18	Complete torque-speed characteristic of an induction machine	345
	Questions and Problems	345
<b>19</b>	<b>THREE-PHASE ALTERNATORS</b>	<b>348</b>
19-1	Commercial alternators	348
19-2	Number of poles	348
19-3	Stator	349
19-4	Rotor	353
19-5	Exciters	353
19-6	Brushless excitation	356
19-7	Factors affecting alternator size	356
19-8	No-load operation	359
19-9	Synchronous reactance—equivalent circuit of an alternator	359
19-10	Nominal impedance, per unit $X_s$ and short-circuit ratio	362
19-11	Alternator under load	362
19-12	Synchronization of an alternator	364
19-13	Alternator on an infinite bus	365
19-14	Infinite bus—effect of varying the exciting current	366
19-15	Infinite bus—effect of varying the mechanical torque	366
19-16	Physical interpretation of alternator behavior	366
19-17	Active power delivered	369
19-18	Transient reactance	370
19-19	Control of active power	372
	Questions and Problems	372
<b>20</b>	<b>SYNCHRONOUS MOTORS</b>	<b>375</b>
20-1	Construction	375
20-2	Starting a synchronous motor	378
20-3	Pull-in torque	378
20-4	Motor under load—general description	378

20-5	Motor under load—simple calculations	379
20-6	Power and torque	381
20-7	Mechanical and electrical angles	383
20-8	Excitation and reactive power	383
20-9	V-curves	384
20-10	Synchronous capacitor	385
20-11	Stopping synchronous motors	387
20-12	Uses of a synchronous motor—comparison with induction motor	389
	Questions and Problems	389
<b>21</b>	<b>SINGLE-PHASE MOTORS</b>	<b>392</b>
21-1	Construction of a single-phase induction motor	392
21-2	Synchronous speed	394
21-3	Torque-speed	395
21-4	Principle of operation	395
21-5	Locked-rotor torque	396
21-6	Resistance split-phase motor	398
21-7	Capacitor-start motor	399
21-8	Characteristics of single-phase induction motors	400
21-9	Vibration of single-phase motors	400
21-10	Capacitor-run motor	402
21-11	Shaded-pole motor	404
21-12	Series motor	405
21-13	Hysteresis motor	405
21-14	Synchronous reluctance motor	407
21-15	Selsyn drive	408
	Questions and Problems	409
<b>PART VI</b>	<b>ELECTRICAL AND ELECTRONIC CONTROLS</b>	<b>411</b>
<b>22</b>	<b>INDUSTRIAL MOTOR CONTROL</b>	<b>413</b>
22-1	Control devices	413
22-2	Normally open and normally closed contacts	413
22-3	Relay coil exciting current	417
22-4	Control diagrams	418
22-5	Starting methods	418
22-6	Manual across-the-line starters	421
22-7	Magnetic across-the-line starters	422
22-8	Inching and jogging	424
22-9	Reversing the direction of rotation	424
22-10	Plugging	424
22-11	Reduced-voltage starting	426
22-12	Primary resistance starting	427
22-13	Autotransformer starting	430
22-14	Other starting methods	432
22-15	Cam switches	432
	Questions and Problems	433
<b>23</b>	<b>FUNDAMENTAL ELEMENTS OF POWER ELECTRONICS</b>	<b>435</b>
23-1	Voltage across some circuit elements	435
23-2	The diode	436
23-3	Principal characteristics of a diode	437
23-4	Battery charger with series resistor	437
23-5	Battery charger with series inductor	439
23-6	Single-phase bridge rectifier	441
23-7	Filters	442
23-8	Three-phase, 3-pulse rectifier	444
23-9	Three-phase, 6-pulse rectifier	446
23-10	The thyristor	450
23-11	Principles of gate firing	452
23-12	Power gain of a thyristor	452

23-13	Current interruption and forced commutation	452
23-14	Basic thyristor power circuits	454
23-15	Controlled rectifier supplying a passive load (Circuit 1)	454
23-16	Controlled rectifier supplying an active load (Circuit 2)	456
23-17	Naturally commutated inverter (Circuit 3)	456
23-18	AC electronic contactor (Circuit 4)	458
23-19	Cycloconverter (Circuit 5)	458
23-20	Self-commutated inverter (Circuit 6)	460
23-21	DC chopper (Circuit 7)	461
23-22	Three-phase, 6-pulse converter	465
23-23	Basic principle of operation	466
23-24	Three-phase, 6-pulse converter	468
23-25	Delayed triggering—inverter mode	468
23-26	Delayed triggering—inverter mode	471
23-27	Triggering range	471
23-28	Equivalent circuit of a converter	472
23-29	Currents in a three-phase, 6-pulse converter	474
23-30	Power factor	476
	Questions and Problems	477
<b>24</b>	<b>ELECTRONIC CONTROL OF DIRECT-CURRENT MOTORS</b>	<b>480</b>
24-1	Fundamentals of electric drives	480
24-2	Typical torque-speed curves	481
24-3	First quadrant speed control	482
24-4	Two-quadrant control—field reversal	485
24-5	Two-quadrant control—armature reversal	486
24-6	Two-quadrant control—two converters	486
24-7	Two-quadrant control—two converters with circulating current	487
24-8	Two-quadrant control with positive torque	489
24-9	Four-quadrant control	490
24-10	DC traction	492
24-11	Current-fed dc motor	494
24-12	Commutator replaced by reversing switches	496
24-13	Synchronous motor as a commutatorless dc machine	498
24-14	Standard synchronous motor and commutatorless dc machine	498
24-15	Synchronous motor drive using current-fed dc line	500
24-16	Synchronous motor and cycloconverter	501
24-17	Cycloconverter voltage and frequency control	503
	Questions and Problems	507
<b>25</b>	<b>ELECTRONIC CONTROL OF ALTERNATING CURRENT MOTORS</b>	<b>510</b>
25-1	Types of ac drives	510
25-2	Shape of the torque-speed curve	511
25-3	Current-speed curves	513
25-4	Regenerative braking	514
25-5	Squirrel-cage induction motor with cycloconverter	516
25-6	Squirrel-cage motor and variable voltage controller	516
25-7	Self-commutated inverters for squirrel-cage motors	518
25-8	Current-fed self-commutated frequency converter	519
25-9	Voltage-fed self-commutated frequency converter	520
25-10	Chopper speed control of a wound-rotor induction motor	521
25-11	Recovering power in a wound rotor induction motor	522
25-12	Pulse width modulation	525

<b>PART</b>	<b>VII ELECTRICAL ENERGY</b>	<b>529</b>
<b>26</b>	<b>BATTERIES AND FUEL CELLS</b>	<b>531</b>
26-1	Principle of a cell	531
26-2	Theory of operation	532
26-3	Internal resistance	533

26-4	Discharge of a cell	533
26-5	Capacity of a cell	534
26-6	Series grouping of cells	535
26-7	Parallel grouping of cells	535
26-8	Series-parallel grouping	536
26-9	Primary cells	536
26-10	Polarization	536
26-11	Carbon-zinc cell	536
26-12	Mercury cell	537
26-13	Alkaline-manganese cell	537
26-14	Life of a primary cell	538
26-15	Secondary cells	538
26-16	Efficiency of a secondary cell	538
26-17	Production of hydrogen	538
26-18	Lead-acid cell—theory of operation	539
26-19	Characteristics of a lead cell	540
26-20	Maintenance of a battery	540
26-21	Nickel-cadmium cell	542
26-22	Special secondary cell	542
26-23	Fuel cells	542
26-24	Hydrogen-Oxygen fuel cell	544
26-25	Types of fuel cells	546
	Questions and Problems	546
<b>27</b>	<b>THE COST OF ELECTRICITY</b>	<b>549</b>
27-1	Tariff based upon energy	549
27-2	Tariff based upon demand	550
27-3	Demand meter	550
27-4	Tariff based upon power factor	552
27-5	Typical rate structures	553
27-6	Demand controllers	553
27-7	Power factor correction	559
	Questions and Problems	562
<b>28</b>	<b>GENERATION OF ELECTRICAL ENERGY</b>	<b>563</b>
28-1	Demand of an electrical system	563
28-2	Location of the generating station	564
28-3	Types of generating stations	566
28-4	Controlling the power balance between generator and load	566
28-5	Advantage of interconnected systems	567
28-6	Conditions during an outage	568
28-7	Frequency and electric clocks	569
	<b>Hydropower Generating Stations</b>	<b>570</b>
28-8	Available power	570
28-9	Types of hydropower stations	570
28-10	Makeup of hydropower plant	573
28-11	Pumped storage installations	
	<b>Thermal Generating Stations</b>	<b>574</b>
28-12	The process of combustion	574
28-13	Fuels	575
28-14	Products of combustion	576
28-15	Makeup of a thermal generating station	576
28-16	Turbines	579
28-17	Condenser	579
28-18	Cooling towers	579
28-19	Boiler feed pump	580
28-20	Energy flow diagram for a steam plant	580

<b>Nuclear Generating Stations</b>	<b>582</b>
28-21 Composition of an atomic nucleus	582
28-22 Energy released by atomic fission	583
28-23 Chain reaction	584
28-24 Types of nuclear reactors	584
28-25 Example of a light-water reactor	585
28-26 Example of a heavy-water reactor	586
28-27 Principle of a fast breeder reactor	587
28-28 Nuclear fusion	588
Questions and Problems	588
<b>29 THE TRANSMISSION OF ELECTRICAL ENERGY</b>	<b>592</b>
29-1 Principal components of a transmission system	592
29-2 Types of power lines	593
29-3 Standard voltages	595
29-4 Components of a transmission line	595
29-5 Construction of a line	597
29-6 Galloping lines	597
29-7 Corona effect—radio interference	597
29-8 Pollution	598
29-9 Ground wires	599
29-10 Tower grounding	599
29-11 Electrical properties of transmission lines	599
29-12 Equivalent circuit of a line	600
29-13 Typical impedance values	600
29-14 Simplifying the equivalent circuit	602
29-15 Voltage regulation and maximum power	603
29-16 Resistive line	604
29-17 Inductive line	605
29-18 Compensated inductive line	605
29-19 Inductive line connecting two systems	606
29-20 Review of power transmission	607
29-21 Choosing the line voltage	608
29-22 Methods of increasing the power capacity	609
29-23 Extra high voltage lines	610
29-24 Power exchange	612
Questions and Problems	615
<b>30 DISTRIBUTION OF ELECTRICAL ENERGY</b>	<b>617</b>
<b>Substations</b>	<b>617</b>
30-1 Substation equipment	617
30-2 Circuit-breakers	617
30-3 Air-break switches	621
30-4 Disconnecting switches	623
30-5 Grounding switches	624
30-6 Lightning arresters	624
30-7 Current-limiting reactors	626
30-8 Grounding transformer	627
30-9 Example of a substation	628
30-10 Medium-voltage distribution	631
30-11 Low-voltage distribution	632
30-12 Coordination of the protective devices	633
30-13 Fused cutouts	634
30-14 Reclosers	634
30-15 Sectionalizers	635
30-16 Review of MV protection	636
<b>Low Voltage Distribution</b>	<b>636</b>
30-17 LV distribution system	636
30-18 Grounding electrical installations	638

30-19	Electric shock	638
30-20	Grounding of 120 V and 240 V/120 V systems	639
