|--|-----------|
| <b>Lesson I      Light and Sight</b>                   | <b>1</b>  |
| A. Nature of Light                                     | 1         |
| B. The Eye   | 2         |
| C. Partnership of Light and Sight                      | 4         |
| <b>Lesson II      Language of Lighting</b>             | <b>9</b>  |
| A. Lighting Terms                                      | 9         |
| B. Lighting Laws                                       | 10        |
| C. Lighting Control                                    | 11        |
| D. Lighting Measurement and Meters                     | 13        |
| <b>Lesson III      Light Sources</b>                   | <b>15</b> |
| A. Production of Light                                 | 15        |
| B. Light Source Characteristics                        | 15        |
| Part I: Incandescent Lamps                             | 16        |
| A. Essential Parts                                     | 16        |
| B. Lamp Types  | 18        |
| C. Operating Characteristics                           | 19        |
| <b>Lesson IV      Light Sources: Gaseous Discharge</b> | <b>23</b> |
| Part Iia: Mercury Lamps                                | 23        |
| A. General   | 23        |
| B. Essential Parts                                     | 23        |
| C. Lamp Designation                                    | 23        |
| D. Lamp Types  | 24        |
| E. Operating Characteristics                           | 25        |
| Part Iib: Fluorescent Lamps                            | 27        |
| A. General   | 27        |
| B. Essential Elements                                  | 27        |
| C. Lamp Types  | 28        |
| D. Operating Characteristics                           | 29        |
| <b>Lesson V      Luminaire Data</b>                    | <b>35</b> |
| A. General   | 35        |
| B. Photometric   | 35        |
| C. Electrical  | 39        |
| D. Mechanical  | 40        |
| E. Cost  | 40        |
| <b>Lesson VI      Illumination Design</b>              | <b>47</b> |
| A. General   | 47        |
| B. Lumen Method  | 47        |
| C. Point-by-Point                                      | 53        |
| <b>Lesson VII      Industrial Lighting</b>             | <b>61</b> |
| A. General   | 61        |
| B. Advantages of Good Lighting in Industry             | 61        |
| C. Factors of Good Lighting                            | 61        |
| <b>Lesson VIII      Offices and Schools</b>            | <b>71</b> |
| A. General   | 71        |
| B. Benefits of Good Lighting                           | 71        |

|  |            |
|--|------------|
| C. Factors of Planned Lighting Design        | 71         |
| <b>Lesson IX      Store Lighting</b>         | <b>79</b>  |
| A. Function of Store Lighting                | 79         |
| B. Elements of Store Lighting Design         | 79         |
| C. Show Window Lighting                      | 81         |
| <b>Lesson X        Exterior Lighting</b>     | <b>85</b>  |
| A. Applications of Exterior Lighting         | 85         |
| B. Design Procedure : Beam Lumen Method      | 86         |
| <b>Lesson XI       Residential Lighting</b>  | <b>95</b>  |
| A. Basic Consideration                       | 95         |
| B. Lighting Equipment                        | 96         |
| <b>Lesson XIII     Cost Analysis</b>         | <b>101</b> |
| A. Lamp Economics                            | 101        |
| B. Lighting System Owning and Operating Cost | 101        |
