

CONTENTS

	Page
I. Introduction	1
I.1 Principles and Modes of Action	1
I.2 Historical	5
I.3 The Various Types of Fuel Cell	7
References	14
II. General Background	16
II.1 Thermodynamics	16
II.2 Electrode Potentials and Current – Voltage Curves	22
II.3 The Effective Efficiency	26
II.4 Electrochemical Methods of Investigation	27
II.5 Fuel Cells and Catalysts	33
II.6 The Relation between Mass – Transfer and Reaction at Two – Phase and Three – Phase Electrodes	35
References	45
III. Electrode Reactions	47
III.1 Hydrogen Electrode	47
1. Reaction Mechanism	48
2. pH-Dependence of the Hydrogen Reaction	50
3. Anodic Current – Potential Curves at High Overpotentials	53
4. Catalytic Activity of Electrode Materials	56
5. The Influence of oxygen Additions to Hydrogen	62
6. Activation by Addition of a Radioactive Isotope to the Electrode Material	68
7. The Hydrogen-Membrane Electrode	69
III.2 Methanol, Formaldehyde and Formic Acid (Formate)	76
1. Mechanisms of Reaction and Establishment of Electrode Potentials	78
2. Galvanostatic Potential-Time Curves and Stationary Current-Potential Curves with Platinized Platinum	85
3. Oscillations at High Current Densities in the Acid electrolytes	88
4. Catalysts	91
5. Mechanism of the Anodic Oxidation of Formaldehyde in Alkaline Solution	93
6. Special Features of the Anodic Oxidation of Formic Acid and Formate	97
III.3 Other Oxygen-Containing Organic Compounds	99
1. Ethanol, Acetaldehyde and Acetic Acid	100
2. Isopropyl Alcohol	100
3. Glycol. Glycerol and Oxalic Acid	102
4. Carbon Monoxide	103
III.4 Hydrocarbons	108
III.5 Hydrazine, Alkali Metal Borohydrides and Ammonia	111
1. Hydrazine as Fuel	111
2. Alkali Metal Borohydrides	116
3. Ammonia	117
III.6 The Oxygen Electrode	119
1. Investigations of Reaction Mechanism	119
2. Discussion of Reaction Mechanism in Alkaline Electrolytes	124
3. The Oxygen Electrode in Acid Electrolytes	125
4. Catalysts	129
III.7 Hydrogen Peroxide, Nitric Acid, Bromine and Chlorine as Oxidants	134
1. Hydrogen Peroxide	134
2. Nitric Acid as Oxidizing Agent	139
3. The Bromine – Bromide Electrode	141

4.	The Chlorine – Chloride Electrode	142
5.	Halogen Compounds as Oxidants in Solution for Cells with Alkaline electrolytes	144
