

## CONTENTS

|                                                            | Page       |
|------------------------------------------------------------|------------|
| <b>1. Electrochemistry</b>                                 | <b>1</b>   |
| 1.1 Atoms, Molecules and Ions                              | 1          |
| 1.2 Ionisation in Aqueous Solution                         | 6          |
| 1.3 Dissociation of Water                                  | 9          |
| 1.4 Electrolytic Conduction                                | 12         |
| 1.5 Electrode Potentials                                   | 14         |
| 1.6 Electrolysis                                           | 18         |
| 1.7 Simple Cells                                           | 24         |
| <b>2. Primary Batteries</b>                                | <b>30</b>  |
| 2.1 Introduction                                           | 30         |
| 2.2 Weston Cells                                           | 31         |
| 2.3 Leclanche Cells                                        | 34         |
| 2.4 Alkaline – Manganese Cells                             | 44         |
| 2.5 Mercury Cells                                          | 48         |
| 2.6 Silver-Zinc Primary Cells                              | 54         |
| 2.7 Copper Oxide Cells                                     | 56         |
| 2.8 Air Depolarised Cells                                  | 58         |
| 2.9 Reserve Cells                                          | 59         |
| <b>3. Secondary Batteries</b>                              | <b>62</b>  |
| 3.1 Introduction                                           | 62         |
| 3.2 Lead-Acid Batteries                                    | 63         |
| 3.3 Nickel-Cadmium Batteries                               | 80         |
| 3.4 Hermetically Sealed Nickel-Cadmium Cells               | 86         |
| 3.5 Nickel-Iron Batteries                                  | 91         |
| 3.6 Alkaline-Manganese Secondary Batteries                 | 92         |
| 3.7 Silver-Zinc Batteries                                  | 93         |
| 3.8 Batteries for Electric Cars                            | 100        |
| <b>4. Fuel Cells</b>                                       | <b>104</b> |
| 4.1 Introduction                                           | 104        |
| 4.2 Fuel and Oxidant                                       | 105        |
| 4.3 The electrolyte                                        | 111        |
| 4.4 Electrodes                                             | 114        |
| 4.5 Construction of Fuel Cells                             | 117        |
| 4.6 Classification of Fuel Cells                           | 119        |
| 4.7 Performance of Fuel Cells                              | 122        |
| 4.8 Other Fuel Cell Systems                                | 127        |
| <b>5. Corrosion</b>                                        | <b>129</b> |
| 5.1 Introduction                                           | 129        |
| 5.2 Oxidation                                              | 130        |
| 5.3 Aqueous Corrosion                                      | 131        |
| 5.4 Protection Against Corrosion                           | 146        |
| <b>6. Electroplating, Forming, Polishing and Machining</b> | <b>154</b> |
| 6.1 Introduction                                           | 154        |
| 6.2 Electroplating                                         | 155        |
| 6.3 Electroless Plating                                    | 167        |
| 6.4 Electroforming                                         | 169        |

|                                                  |            |
|--------------------------------------------------|------------|
| 6.5 Electropolishing                             | 171        |
| 6.6 Electrochemical Machining                    | 172        |
| 6.7 Electrochemical Grinding                     | 179        |
| <b>7. Extraction and Refining of Metals</b>      | <b>181</b> |
| 7.1 Introduction                                 | 181        |
| 7.2 Electrolysis of Fused Salts                  | 181        |
| 7.3 Electrolysis of Aqueous Solutions            | 190        |
| <b>8. Other Applications of Electrochemistry</b> | <b>200</b> |
| 8.1 Introduction                                 | 200        |
| 8.2 Analytical Methods                           | 200        |
| 8.3 Large-scale Chemical Production              | 209        |
| 8.4 Miscellaneous Applications                   | 216        |
| <b>Index</b>                                     | <b>223</b> |
