Preface ix

| | |
|--|-----------|
| Introduction | 1 |
| 1. Sinusoidal Waves | 5 |
| 1.1 Basics of Sinusoidal Wave Motion in One Dimension / 6 | |
| 1.2 Spherical Waves and Energy Transport / 9 | |
| 1.3 Relations Between Plane and Spherical Waves—The Far Field / 12 | |
| 1.4 Wave Interference / 14 | |
| Problems / 21 | |
| 2. Transmission Lines | 25 |
| 2.1 Basic Relationships of Voltages and Currents / 25 | |
| 2.2 Reflections at Discontinuities / 29 | |
| 2.3 Various Types of Transmission Lines / 37 | |
| Problems / 40 | |
| 3. The Electromagnetic Field | 43 |
| 3.1 The Electromagnetic Field Vectors and Basic Constants / 44 | |
| 3.2 Maxwell's Field Equations and Electromagnetic Waves / 48 | |
| 3.3 The Relation Between Electromagnetism and Circuit Theories / 52 | |
| Problems / 54 | |

4. Wire Antennas and Basic Antenna Theory

- 4.1 Radiation by an Electric Dipole / 58
- 4.2 Radiation Resistance and Directivity / 61
- 4.3 Straight Wire Antennas—Standing Wave Excitation / 63
- 4.4 Straight Wire Antennas—Traveling Wave Excitation / 70
- 4.5 Helix and Loop / 73
- 4.6 Antennas Above a Flat Conducting Ground / 76
- Problems / 81

5. Plane Waves, Rays, and Geometrical Optics

- 5.1 Plane Electromagnetic Waves / 83
- 5.2 Polarization / 86
- 5.3 Reflection and Refraction / 89
- 5.4 Geometrical Optics / 96
- Problems / 101

6. Waveguides

- 6.1 Parallel Plane Waveguide / 105
- 6.2 Rectangular Waveguide / 107
- 6.3 General Waveguides / 112
- Problems / 116

7. Horn, Slot, and Microstrip Patch Antennas

- 7.1 Aperture Radiation / 120
- 7.2 Horns / 124
- 7.3 Waveguide Slots / 128
- 7.4 Microstrip Patches / 131
- Problems / 133

8. Antenna Arrays

- 8.1 General Arrays / 138
- 8.2 Linear Arrays / 141
- 8.3 Planar Arrays / 149
- Problems / 157

9. Practical Arrays: Elements, Feed Methods, Scanning, and the Effect of Errors **159**

- 9.1 Linear Array Feeding Methods / 159
- 9.2 Waveguide Slot and Microstrip Arrays / 163

- 9.3 Parasitic Elements and Thinned Arrays / 169
- 9.4 Mechanical, Electronic, and Hybrid Scanning / 172
- 9.5 Monopulse and Other Special Beam-forming Designs / 174
- 9.6 Phase Shifters (Phasers) for Phased Arrays / 178
- 9.7 Random Errors in Phased Arrays / 182
- 9.8 Element Failures in Phased Arrays / 185
- 9.9 Systematic Errors in Phased Arrays / 188
- Problems / 191

10. Reflector and Lens Antennas

- 10.1 Aperture Antenna Gain / 193
- 10.2 Reflector Geometry / 197
- 10.3 The Far Field of a Circular Reflector / 202
- 10.4 Design of Various Reflector Antennas and Feeds / 206
- 10.5 Lens Antennas / 217
- Problems / 221

11. Miscellaneous Types of Traveling Wave and Broad-Band Antennas

- 11.1 Traveling Wave and Surface Wave Antennas / 225
- 11.2 Broad-Band Antennas / 231
- Problems / 238

12. Radomes and Windows

- 12.1 The Uniform Dielectric Wall / 241
- 12.2 The Effects of Radomes / 243
- 12.3 Radome Construction / 247
- Problems / 250

13. Reciprocity, the Friis Formula, and Antenna Noise Temperature

- 13.1 Reciprocity / 255
- 13.2 The Friis Formula / 260
- 13.3 Antenna Noise Temperature / 260
- Problems / 264

14. The Radar Equation and the Radar Cross Section

- 14.1 The Radar Equation / 265
- 14.2 The Radar Cross Section / 269
- Problems / 279

Appendix A. The Algebra of Complex Numbers and Its Application to Waves

- A.1 Definitions and Algebraic Operations / 281
- A.2 Application to Sinusoidal Phenomena / 286
- A.3 Application to Electric Circuit Theory / 288
- A.4 Application to Wave Phenomena / 290

Appendix B. Vector Algebra and Some Applications

- B.1 Definitions and Algebraic Operations / 293
- B.2 Applications to Geometry and Electromagnetic Waves 297

Appendix C. The Fourier Integral and Its Application to Antennas

- C.1 The Fourier Series / 303
- C.2 The Fourier Integral / 307
- C.3 Application to Several Illuminations / 309

Appendix D. Design of a Circular Parabolic Reflector Antenna

Annotated Bibliography
