1. CHEMISTRY AND PROPERTIES OF COATINGS—<i>Polyurethanes—</i>	
<i>Epoxies—Phenoxies—Silicones</i>	1
Polyurethanes	1
The Chemistry of Polyurethanes	2
Classifications and Properties	5
One-Component Blocked Polyurethanes (ASTM Type 3)	7
Two-Component Prepolymer: Polyol (ASTM Type 5)	8
Two-Component Catalyst-Cured Systems (ASTM Type 4)	10
One-Component Oil-Modified Systems: Uralkyds (ASTM Type 1)	12
One-Component Moisture-Cured Systems (ASTM Type 2)	13
One-Component Nonreactive (ASTM Type 6)	14
Epoxies	15
The Chemistry of Epoxies	15
Bisphenol A Resins	16
Novolac Resins	18
Other Epoxy Types	19
Curing Agents and the Polymerization Process	21
Catalytic Polymerization	21
Catalytic Cure	22
Polymerization with Amine Hardeners	23
Polymerization with Acid and Anhydride Hardeners	26
Polymerization with Polyamide Resins	27
Latent Curing Agents	28
Classification of Epoxy Coatings	29
Nonesterified Solution Coatings	29
Esterified Solution Coatings	29
100-Percent-Solids Coatings	30
Properties of Epoxies	30

Adhesion	30
Water and Salt-Spray Resistance	31
Electrical Properties	31
Thermal Stability	33
Properties of 100-Percent-Solids Coatings	36
Properties of Esterified Epoxies	36
Phenoxies	37
Silicones	37
The Chemistry of Silicones	38
Silicone Alkyds	41
Halogenated Silicones	42
Silicone Properties	42
RTV (Room Temperature Vulcanizing) Silicones	48
References	53
2. CHEMISTRY AND PROPERTIES OF COATINGS—Polyimides—	
<i>Fluorocarbons—Polyxylylenes</i>	55
Polyimides	55
The Chemistry and Structure of Polyimides	55
Condensation-Type Polyimides	56
Addition-Type Polyimides	57
Solvent-Soluble Polyimides	58
Photosensitive Polyimides	61
Properties of Polyimides	61
Thermal Stability	61
Solvent and Chemical Resistance	64
Moisture Resistance	65
Electrical Properties	65
Fluorocarbons	65
The Chemistry of Fluorocarbons	65
Properties of Fluorocarbons	67
Electrical Properties	67
Thermal Properties	68
Mechanical Properties	68
Chemical and Solvent Resistance	69
Fluorocarbon Dispersion Coatings	72
Polyxylylenes	73
Chemistry	73
Properties of Polyxylylenes	75
Electrical Properties	76
Other Properties	78
Electronic Applications	80
References	83
3. CHEMISTRY AND PROPERTIES OF COATINGS—Polyesters—	
<i>Polyvinyls—Polystyrenes—Acrylics—Diallylphthalates—</i>	
<i>Polyamides—Phenolics—Polysulfides</i>	85
Polyesters	85

The Chemistry of Unsaturated Polyesters	85
The Chemistry of Alkyd Polyesters	86
Properties of Alkyd Coatings	88
Polyvinyls	88
Properties of Polyvinyls	90
Polyvinyl Formals	91
Polyvinyl Alcohols and Acetates	91
Polyvinyl Chlorides and Fluorides	92
Polystyrenes	93
Acrylics	94
Diallylphthalate and Other Allylic Polymers	95
Polyamides	96
Properties of Polyamides	97
Phenolics	97
Properties of Phenolics	99
Polysulfides	100
Properties of Polysulfides	101
References	101
4. FUNCTIONS OF COATINGS	103
Electrical Properties	103
Resistance and Resistivity	104
The Effect of Variables on Resistivity	105
Surface Resistivity	109
Conductance and Conductivity	111
Metal-Filled Polymers	111
Molecularly Conductive Polymers	112
Capacitance	113
Dielectric Constant	114
Dissipation Factor and Power Factor	117
Variation of Dielectric Constant and Dissipation Factor with Temperature	118
Variation of Dielectric Constant and Dissipation Factor with Cure	119
Dielectric Strength and Breakdown Voltage	122
Arc Resistance	124
Environmental Protection	125
Protection Against Moisture	125
Water Absorption	125
Permeability	126
Humidity Testing	128
Protection Against Corrosion	129
Magnesium	130
Tin-Lead Solder	133
Aluminum	133
Magnesium-Lithium Alloys	133
Wash Primers	134
Other Primers	134

Mechanical Protection	135
Abrasion Resistance	135
Friction Resistance	136
Hardness	136
Protection Against Electromagnetic and Radiofrequency Interference	139
Protection Against Electrostatic Discharge	139
Microbial Protection	140
Thermal Conductivity	142
Test Methods	145
The Guarded-Hot-Plate Method	145
Heat-Flow Meter Method	146
References	147
5. MANUFACTURING TECHNOLOGY	150
Cleaning	150
The Nature and Effects of Contaminants	150
Prevention of Contamination	154
Removal of Contaminants	154
Solvents and Solutions Used for Cleaning	154
Solvent Purity	155
Cleaning Methods	156
Verification of Surface Cleanliness	161
Application Methods	162
Spray Coating	162
Pressurized Liquid	162
Airless Spray	162
Hot-Melt Flame Spraying	165
Other Spray Equipment	165
Electrostatic Spray Coating	165
Dip Coating	166
Fluidized-Bed Coating	168
Sprayed-Powder Process	172
Electrostatic Fluidized-Bed Process	172
Vacuum Impregnation	172
Screen Printing	173
Spin Coating	173
Flow and Curtain Coating	175
Roller Coating	175
Brushing	175
Automated Coating Processes	175
Spray Coating	175
Dip Coating	176
Curing and Polymerization of Solid Films	177
Heat Curing	177
Step Curing	178
Equipment	178
Photocuring	178

Photoinitiation	178
Free-Radical Photopolymerization	179
Cationic Photopolymerization	179
Properties	179
Equipment	182
Thin-Film Deposition	182
Spin Coating	184
Vapor Deposition	184
Ultraviolet-Light Polymerization	186
Electron-Bombardment Polymerization	188
Glow-Discharge/Plasma Polymerization	189
Gamma-Radiation Curing	190
General Properties of Thin-Film Polymer Coatings	191
References	192
6. CIRCUIT COATINGS	196
Circuit-Board Coatings	196
Types of Coatings	196
Reliability	200
Failure Due to Moisture	203
Coating Thickness and Coverage	206
Reworkability of Coated Assemblies	209
Multilayer-Circuit Insulation	210
Resist Coatings	211
Photoresists	211
Negative Resists	212
Positive Resists	215
Dry Film Resists	215
Screened Resists	215
Other Resists and Maskants	216
Coatings for Thin- and Thick-Film Circuits	217
Polymer Thick Films	218
PTF Conductors	218
PTF Resistors	219
PTF Dielectrics	220
Conformal Coatings for Thick-Film Circuits	220
Particle Immobilizing Coatings	221
Polymeric Dielectrics for High-Density, High-Speed Circuits	221
References	224
7. COATINGS FOR SPACE ELECTRONICS	226
Outgassing	226
Requirements and Tests for Spacecraft Materials	229
Toxicity of Outgassing Products	231
Sterilization	232
Sterilization Requirements	232
Materials Problems	232
Thermal-Sterilization Effects	233

Ethylene Oxide Effects	234
Space and Nuclear Radiation	236
The Space-Radiation Environment	236
The Nuclear-Radiation Environment	237
Effects of Radiation on Polymeric Materials	237
Permanent Effects	237
Transient Effects	238
Side Effects	238
Radiation Effects on Plasticizers and Fillers	242
Correlation of Organic Structures with Radiation Resistance	242
Relative Radiation Resistance of Coatings	244
Ultraviolet Irradiation	244
Combined Space-Environment Effects	246
References	248
8. WIRE AND COIL COATINGS	250
Magnet-Wire Classifications	250
Wire-Coating Types	252
Plain-Enamel or Oleoresinous Coatings	253
Polyvinyl Formal and Modified-Polyvinyl Formal Coatings	259
Polyurethane Coatings	260
Polyester Varnishes and Enamels	260
Polyimide Coatings	261
Impregnating Varnishes	262
Application and Winding Methods	264
Testing Wire Coatings	265
Film Thickness	265
Adhesion	265
Flexibility	265
Heat Shock	265
Elongation	265
Scrape Resistance	265
Springback	266
Thermoplastic Flow	266
Dielectric Strength	266
Continuity	267
Solvent Resistance and Completeness of Cure	267
Solderability	268
Electrical Overload	268
Bond Strength of Self-Bonding Wire	268
Alcohol Tack	268
Thermal Rating and Thermal Stability	268
Differential Scanning Calorimetry (DSC)	269
Thermogravimetric Analysis (TGA)	271
Thermomechanical Analysis (TMA)	271
Effects of Radiation	271
Stripping of Wire Coatings	273
References	276

9. COATINGS FOR ELECTRONIC COMPONENTS AND DEVICES	278
Functions of Plastic Packaging Materials for Discrete Devices	279
Plastic Packaging Materials	280
Glob-Top Coatings.	288
Thin-Film Coatings	288
Fabrication Aids	288
Photosensitive Polyimides	290
Interlayer Insulation and Passivation	291
Functions of Coating Materials for Hybrid Microcircuits	293
Particle Immobilizing Coatings.	293
Parylene Coatings	293
Solvent-Soluble Coatings.	293
Particle Getters	293
Application Methods	294
Transfer Molding.	295
Casting, Dipping, Dropping, and Spinning Processes	298
Fluidized-Bed Coating	300
Parameters Affecting Electronic Devices	300
Stresses and Stress Relief	300
Relieving Stress by Means of Barrier Coatings (Glob-Top)	300
Mechanical Protection with Rigid Encapsulants.	300
Design Considerations in Minimizing Stresses	301
Stress Testing	304
Purity	304
Ionic Impurities	305
Other Impurities	307
Optimum Resin-to-Hardener Weight Ratios	308
Tests for Plastic Purity	308
Moisture Resistance.	310
Water Absorption	311
Moisture-Vapor Transmission.	313
The Pressure-Cooker Test	314
The Dye-Penetration Test	314
Corrosivity.	314
Corrosion Tests.	316
Adhesion	318
Tests for Adhesion.	319
Commercial and Military Uses of Plastic Packages	319
References	320
10. SPECIFICATIONS	324
Material Specifications	324
Process Specifications.	325
Electrical-Performance Specifications	348
Commercial, Military, and Federal Specifications.	348
Test Methods for Organic Coatings	348
References	362

APPENDIX 363

Table A-1: Abbreviations and Symbols Used in Text 363

Table A-2: Thickness Units and Equivalents Commonly Used for Coatings 365

Table A-3: Thermal-Conductivity Units and Equivalents 365

Table A-4: Thermal-Conductivity Data 366

Table A-5: Coefficients of Linear Thermal Expansion 368

Table A-6: Water-Absorption Data 370

Table A-7: Moisture-Vapor-Transmission Rates of Plastic Coatings and Films 371

Table A-8: Sward Hardness Values for Coatings 372

Table A-9: Abrasion-Resistance Values for Organic Coatings 373

Table A-10: Dielectric Strength 374

Table A-11: Arc Resistance 376

Table A-12: Volume Resistivities 377

Table A-13: Dielectric Constants of Polymer Coatings (at 25°C) 378

Table A-14: Dielectric Constants of Materials Other Than Polymers 380

Table A-15: Dielectric Constants of Inorganic Insulators 380

Table A-16: Dissipation Factors (at 25°C) 381

INDEX 382
