

CONTENTS

1. Introduction to the microwave engineering handbook	1
2. Microwave tubes	19
3. Power grid tubes	41
4. Cross-field tubes	65
5. Linear-beam tubes	81
6. Fast-Wave devices	111
7. Associated equipment for tubes	133
8. The laser	165
9. P-I-n and varactor diodes	183
10. IMPATT and Gunn diodes	213
11. Schottky diodes for reception	231
12. Diodes: associated circuits	239
13. Microwave transistors	261
14. MESFET operation principles and device modelling	303
15. GaAs FET manufacture technology Thomson-CSF	323
16. Solid-State opto-electronic devices	341
17. Optical sources	349
18. Infrared passive sensors	385
19. Passive theory and devices	423
20. CAD software	481
Index	491
