

CONTENTS

1. Point—to point transmission, terrestrial line-of-sight links	1
1.1 General	1
1.2 Principles	2
1.3 Analogue Microwave links	10
1.4 Digital microwave links	49
1.5 Specific nature of over-the-horizon microwave links	109
2. Satellite links	125
2.1 General	125
2.2 Basic Principles	137
2.3 Communication satellite technology	167
2.4 Earth stations	191
2.5 Conclusions and prospects	224
3. Low and medium power translators	229
3.1 Optimization of the input design of a television translator	229
3.2 Development of television transmitter modulation stages	240
3.3 Optimization of the output design of a television transmitter or translator and enhancing the- Level of transistorization	246
3.4 Conclusion	253
4. Radar systems	267
4.1 The history of radar	267
4.2 General description of radar systems	273
4.3 Main applications of radar systems	323
4.4 Expected evolution of radar systems	326
5. Electronic confrontation	331
5.1 Introduction	331
5.2 Electronic countermeasures (ESM)	342
5.3 Electronic countermeasures (ECM)	342
5.4 ECCM applied to radio frequency links	350
5.5 ECCM applied to radars	355
5.6 System design methodology	371
6. Infrared	377
6.1 Introduction	377
6.2 Short historical background	382
6.3 Theory notes	386
6.4 Infrared techniques	415

6.5 Military applications of infrared	444
6.6 Developments and trends in the infrared links	466
7. Industrial, scientific and medical (ISM) applications of microwaves present and prospective	471
7.1 Introduction	471
7.2 High power applications	474
7.3 Active sensors and systems	495
7.4 Passive sensors and systems	501
7.5 Conclusion	507
8. Radioastronomy	511
8.1 Introduction	512
8.2 Radio telescopes	512
8.3 Cosmic radio emission	520
8.4 Continuum radio sources	524
8.5 The 21 cm hydrogen line	531
8.6 Interstellar molecules	531
8.7 Conclusion and prospects	541
Index	545
