Preface	ix
Acknowledgments	xi
Introduction	1
2 Mirrors, Flames and Membranes	10
Summary	10
2.1 Observations of sparks through rotating mirrors	10
2.2 Acoustic measurements	31
2.3 The phonograph	61
3 Contact methods	81
Summary	81
3.1 The stroboscope	81
3.2 Simple manually set contacts	83
3.3 Semiautomatic and fully automatic contact systems and other modifications	96
3.4 Rotating contacts used for other purposes	112
3.5 The observation of repeated transient waveforms	116
4 Moving-Coil Oscillographs	130
Summary	130
4.1 Use of the moving-coil galvanometer	130
4.2 Theoretical considerations	134
4.3 Blondel, Duddell and the bifilar oscillograph	138
4.4 Bifilar instruments constructed by other experimenters	163
4.5 Single-wire instruments	169
5 Moving-Iron Oscillographs and Compensated Instruments	175
Summary	175
5.1 Moving-iron oscillographs	175
5.2 Externally compensated instruments	196

6	Miscellaneous Methods	208
	Summary	208
6.1	Chemical methods	208
6.2	Optical systems using polarised light	217
6.3	The mercury jet	222
6.4	Electrostatic and hot-wire oscillographs	223
6.5	The electrocapillary method	229
7	Cathode Rays	239
	Summary	239
7.1	The first steps	239
7.2	Improvements	241
	Index	251
