

Preface	xv
<b>1 Introduction</b>	<b>1</b>
1.1 Historical Overview	2
1.2 Electronic Packaging	7
1.3 Encapsulated Microelectronic Packages	11
1.3.1 2D Packages	12
1.3.1.1 Through-Hole Mounted Packages	12
1.3.1.2 Surface-Mounted Packages	14
1.3.1.3 Substrate Packages	17
1.3.1.4 Multi-Chip Module Packages	18
1.3.2 3D Packages	19
1.3.2.1 Stacked Die	20
1.3.2.2 Stacked Packages	29
1.3.2.3 Folded Packages	31
1.4 Hermetic Packages	31
1.4.1 Metal Packages	33
1.4.2 Ceramic Packages	33
1.5 Encapsulants	34
1.5.1 Plastic Molding Compounds	34
1.5.2 Other Plastic Encapsulation Methods	35
1.6 Plastic versus Hermetic Packages	36
1.6.1 Size and Weight	36
1.6.2 Performance	37
1.6.3 Cost	37
1.6.4 Hermeticity	38
1.6.5 Reliability	40
1.6.6 Availability	42
1.7 Summary	42
References	43
<b>2 Plastic Encapsulant Materials</b>	<b>47</b>
2.1 Chemistry Overview	47
2.1.1 Epoxies	49
2.1.2 Silicones	52

2.1.3	Polyurethanes	52
2.1.4	Phenolics	54
2.2	Molding Compounds	56
2.2.1	Resins	57
2.2.2	Curing Agents or Hardeners	60
2.2.3	Accelerators	66
2.2.4	Fillers	66
2.2.5	Coupling Agents	73
2.2.6	Stress-Relief Additives	73
2.2.7	Flame Retardants	76
2.2.8	Mold-Release Agents	77
2.2.9	Ion-Trapping Agents	78
2.2.10	Coloring Agents	78
2.2.11	Market Conditions and Manufacturers of Encapsulant Materials	79
2.2.12	Material Properties of Commercially Available Molding Compounds	81
	2.2.12.1 Nitto Denko	82
	2.2.12.2 Sumitomo Bakelite	82
	2.2.12.3 Plaskon	82
2.2.13	Materials Development	86
2.3	Glob-Top Encapsulants	89
2.4	Potting and Casting Encapsulants	90
	2.4.1 Dow Corning Materials	90
	2.4.2 General Electric Materials	91
2.5	Underfill Encapsulants	95
2.6	Printing Encapsulants	101
2.7	Environmentally Friendly or "Green" Encapsulants	102
	2.7.1 Toxic Flame Retardants	102
	2.7.2 Green Encapsulant Material Development	107
	2.7.2.1 Green Materials with Non-Halogenated Flame Retardants	111
	2.7.2.2 Green Materials without Flame Retardants	116
2.8	Summary	122
	References	122

<b>3</b>	<b>Encapsulation Process Technology</b>	<b>129</b>
3.1	Molding Technology	129
3.1.1	Transfer Molding	129
3.1.1.1	Molding Equipment	131
3.1.1.2	Transfer Molding Process	136
3.1.1.3	Molding Simulation	141
3.1.2	Injection Molding	143
3.1.3	Reaction-Injection Molding	144
3.1.4	Compression Molding	145
3.1.5	Comparison of Molding Processes	146
3.2	Glob-Topping Technology	147
3.3	Potting and Casting Technology	151
3.3.1	One-Part Encapsulants	152
3.3.2	Two-Part Encapsulants	153
3.4	Underfilling Technology	154
3.4.1	Conventional Flow Underfill	155
3.4.2	No-flow Underfill	157
3.5	Printing Encapsulation Technology	157
3.6	Encapsulation of 2D Wafer-Level Packages	159
3.7	Encapsulation of 3D Packages	161
3.8	Cleaning and Surface Preparation	169
3.8.1	Plasma Cleaning	169
3.8.2	Deflashing	173
3.9	Summary	175
	References	176
<b>4</b>	<b>Characterization of Encapsulant Properties</b>	<b>181</b>
4.1	Manufacturing Properties	181
4.1.1	Spiral Flow Length	181
4.1.2	Gelation Time	183
4.1.3	Bleed and Flash	184
4.1.4	Rheological Compatibility	184
4.1.5	Polymerization Rate	185
4.1.6	Curing Time and Temperature	187
4.1.7	Hot Hardness	188
4.1.8	Post-cure Time and Temperature	189
4.2	Hygro-thermomechanical Properties	189
4.2.1	Coefficient of Thermal Expansion and Glass Transition Temperature	189

4.2.2	Thermal Conductivity	195
4.2.3	Flexural Strength and Modulus	197
4.2.4	Tensile Strength, Elastic and Shear Modulus, and %Elongation	198
4.2.5	Adhesion Strength	200
4.2.6	Moisture Content and Diffusion Coefficient	203
	4.2.6.1 Fickian Diffusion	204
	4.2.6.2 Non-Fickian Diffusion	206
4.2.7	Coefficient of Hygroscopic Expansion	208
4.2.8	Gas Permeability	211
4.2.9	Outgassing	212
4.3	Electrical Properties	214
4.4	Chemical Properties	216
	4.4.1 Ionic Impurity (Contamination Level)	216
	4.4.2 Ion Diffusion Coefficient	217
	4.4.3 Flammability and Oxygen Index	218
4.5	Summary	218
	References	220
<b>5</b>	<b>Encapsulation Defects and Failures</b>	<b>225</b>
5.1	Overview of Package Defects and Failures	225
	5.1.1 Package Defects	225
	5.1.2 Package Failures	226
	5.1.3 Classification of Failure Mechanisms	228
	5.1.4 Contributing Factors	235
5.2	Encapsulation Defects	236
	5.2.1 Wire Sweep	236
	5.2.2 Paddle Shift	241
	5.2.3 Warpage	242
	5.2.4 Die Cracking	245
	5.2.5 Delamination	246
	5.2.6 Voids	247
	5.2.7 Non-uniform Encapsulation	249
	5.2.8 Flash	250
	5.2.9 Foreign Particles	250
	5.2.10 Incomplete Cure	250
5.3	Encapsulation Failures	251
	5.3.1 Delamination	251
	5.3.2 Vapor-Induced Cracking (Popcorning)	258

5.3.3	Brittle Fracture	262
5.3.4	Ductile Fracture	265
5.3.5	Fatigue Fracture	266
5.4	Failure Accelerators	268
5.4.1	Moisture	268
5.4.2	Temperature	272
5.4.3	Exposure to Contaminants and Solvents	273
5.4.4	Residual Stresses	274
5.4.5	General Environmental Stress	275
5.4.6	Manufacturing and Assembly Loads	276
5.4.7	Combined Load–Stress Conditions	276
5.5	Summary	276
	References	277

<b>6</b>	<b>Defect and Failure Analysis Techniques for Encapsulated Microelectronics</b>	<b>287</b>
6.1	General Defect and Failure Analysis Procedures	287
6.1.1	Electrical Testing	288
6.1.2	Non-destructive Evaluation	288
6.1.3	Destructive Evaluation	289
	6.1.3.1 Analytical Testing of the Encapsulant Material	289
	6.1.3.2 Decapsulation (Removal of the Encapsulant)	290
	6.1.3.3 Internal Examination	296
	6.1.3.4 Selective Layer Removal	297
	6.1.3.5 Locating the Failure Site and Identifying the Failure Mechanism	297
	6.1.3.6 Simulation Testing	297
6.2	Optical Microscopy	298
6.3	Scanning Acoustic Microscopy	301
6.3.1	Imaging Modes	302
6.3.2	C-Mode Scanning Acoustic Microscope	302
6.3.3	Scanning Laser Acoustic Microscope	310
6.3.4	Case Studies	312
	6.3.4.1 C-mode Imaging of Delaminations in a 40-Pin PDIP	312
	6.3.4.2 Rapid Screening for Defects Using THRU-Scan™ Imaging	313

	6.3.4.3	Non-destructive Cross-Section Analysis of Plastic-Encapsulated Devices Using Q-BAM™ and TOF Imaging	317
	6.3.4.4	Production Rate Screening Using Tray-Scan Imaging	318
	6.3.4.5	Molding Compound Characterization	319
6.4		X-ray Microscopy	321
	6.4.1	X-ray Generation and Absorption	322
	6.4.2	X-ray Contact Microscope	325
	6.4.3	X-ray Projection Microscope	327
	6.4.4	High-Resolution Scanning X-ray Diffraction Microscope	328
	6.4.5	Case Study: Encapsulation in Plastic-Encapsulated Devices	329
6.5		X-ray Fluorescence Spectroscopy	331
6.6		Electron Microscopy	332
	6.6.1	Electron-Specimen Interaction	333
	6.6.2	Scanning Electron Microscopy	335
	6.6.3	Environmental Scanning Electron Microscopy (ESEM)	337
	6.6.4	Transmission Electron Microscopy	339
6.7		Atomic Force Microscopy	342
6.8		Infrared Microscopy	342
6.9		Selection of Failure Analysis Techniques	344
6.10		Summary	348
		References	349
<b>7</b>		<b>Qualification and Quality Assurance</b>	<b>351</b>
	7.1	A Brief History of Qualification and Reliability Assessment	352
	7.2	Qualification Process Overview	356
	7.3	Virtual Qualification	361
	7.3.1	Life-Cycle Loads	363
	7.3.2	Product Characteristics	366
	7.3.3	Application Requirements	367
	7.3.4	Reliability Prediction using PoF Approach	367
	7.3.5	Failure Modes, Mechanisms, and Effects Analysis (FMMEA)	369

7.4	Product Qualification	371
7.4.1	Strength Limits and Highly Accelerated Life Test	372
7.4.2	Qualification Requirements	374
7.4.3	Qualification Test Planning	377
7.4.4	Modeling and Validation	378
7.4.5	Accelerated Testing	378
7.4.6	Reliability Assessment	382
7.5	Qualification Accelerated Tests	383
7.5.1	Steady-State Temperature Test	384
7.5.2	Thermal Cycling Test	385
7.5.3	Tests That Include Humidity	386
7.5.4	Solvent Resistance Test	390
7.5.5	Salt Atmosphere Test	391
7.5.6	Flammability and Oxygen Index Test	391
7.5.7	Solderability	391
7.5.8	Radiation Hardness	392
7.6	Industry Practices	392
7.7	Quality Assurance	394
7.7.1	Screening Overview	399
7.7.2	Stress Screening and Burn-In	400
7.7.3	Screen Selection	401
	7.7.3.1 Screen Stress Levels	402
	7.7.3.2 Screen Duration	405
7.7.4	Root-Cause Analysis	406
7.7.5	Economy of Screening	407
7.7.6	Statistical Process Control	408
7.8	Summary	410
	References	411
<b>8</b>	<b>Trends and Challenges</b>	<b>417</b>
8.1	Microelectronic Device Structure and Packaging	417
8.2	Extreme High- and Low-Temperature Electronics	431
	8.2.1 High Temperatures	431
	8.2.2 Low Temperatures	433
8.3	Emerging Technologies	434
	8.3.1 Microelectromechanical Systems	435
	8.3.2 Bioelectronics, Biosensors, and Bio-MEMS	440

8.3.3	Nanotechnology and Nanoelectronics	445
8.3.4	Organic Light-Emitting Diodes, Photovoltaics, and Optoelectronics	449
8.4	Summary	453
	References	455
	Index	459
