Preface	xv
<b>Chapter 1 Development and Fabrication of IC Chips</b>	<b>1.1</b>
1.1 Introduction	1.1
1.2 <b>Atomic</b> Structure	1.2
1.3 Vacuum Tubes	1.5
1.4 Semiconductor Theory	1.9
1.4.1 The diode	1.12
1.4.2 The junction-type bipolar transistor	1.12
1.4.3 The field-effect transistor (FET)	1.16
1.4.4 The junction field-effect transistor (JFET)	1.16
1.4.5 The metal-oxide semiconductor field-effect transistor (MOSFET)	1.18
1.4.6 The CMOSFET transistor	1.18
1.5 Fundamentals of Integrated Circuits	1.21
1.6 <b>IC</b> Chip Fabrication	1.27
1.6.1 Ingot growth and wafer preparation	1.29
1.6.2 Cleanliness	1.32
1.6.3 <b>IC</b> fabrication	1.35
<b>Chapter 2 Plastics, Elastomers, and Composites</b>	<b>2.1</b>
2.1 Introduction	2.1
2.2 Fundamentals	2.2
2.2.1 Polymer definition	2.2
2.2.2 Types of polymers	2.2
2.2.3 Structure and properties	2.3
2.2.4 Synthesis	2.5
2.2.5 Terminology	2.7
2.3 Thermoplastics	2.14
2.3.1 Acrylics	2.17
2.3.2 Fluoropolymers	2.17
2.3.3 Ketone resins	2.21
2.3.4 Liquid crystal polymers	2.22
2.3.5 Nylons	2.23

2.3.6	Polyamide-imides	2.25
2.3.7	Polyimides	2.26
2.3.8	Polyetherimide	2.28
2.3.9	<b>Polyarylate</b> and polyesters	2.29
2.3.10	Polycarbonates	2.30
2.3.11	Polyolefins	2.30
2.3.12	Polyphenylene oxide	2.31
2.3.13	Polyphenylene sulfide	2.31
2.3.14	<b>Styrenics</b>	2.31
2.3.15	Polysulfones	2.32
2.3.16	Vinyls	2.32
2.3.17	Thermoplastic alloys and blends	2.32
2.4	Thermosets	2.34
2.4.1	<b>Allyl</b> resins	2.36
2.4.2	Bismaleimides	2.36
2.4.3	Epoxy resins	2.36
2.4.4	Phenolic resins	2.37
2.4.5	Polyesters	2.37
2.4.6	Polyurethanes	2.39
2.4.7	Silicones	2.39
2.4.8	Cross-linked thermoplastics	2.41
2.4.9	<b>Cyanate</b> ester resins	2.41
2.4.10	Benzocyclobutenes	2.44
2.5	Elastomers	2.48
2.5.1	Properties	2.48
2.5.2	Types of elastomers	2.50
2.5.3	Thermoplastic elastomers ( <b>TPEs</b> )	2.53
2.6	Applications	2.53
2.6.1	Laminates	2.53
2.6.2	Molding and extrusion	2.54
2.6.3	Casting and potting	2.56
2.6.4	Adhesives	2.56
2.6.5	Organic coatings	2.57
<b>Chapter 3 Ceramics and Glasses</b>		<b>3.1</b>
3.1	Introduction	3.1
3.2	Ceramic Interconnections for Microelectronics	3.2
3.2.1	Thin film	3.3
3.2.2	Thick film	3.5
3.2.3	Multilayer packaging	3.9
3.2.4	High-temperature cofired ceramics	3.10
3.2.5	Low-temperature cofired ceramics	3.11
3.3	Capacitors	3.15
3.3.1	Capacitor material classification	3.21
3.3.2	Effect of additives	3.28
3.4	Electromechanical Ceramics	3.31
3.4.1	<b>Piezoelectrics</b>	3.34
3.4.2	Ferroelectrics	3.35
3.4.3	Electrostrictors	3.38
3.4.4	Materials	3.39
3.4.5	Applications of electromechanical materials	3.43
3.5	<b>Electro-optic</b> materials	3.46
3.6	Materials	3.51
3.6.1	Applications	3.53

3.7	Magnetic Ceramics	3.55
3.7.1	Spinels	3.62
3.7.2	Garnets	3.68
3.7.3	Perovskites	3.69
3.7.4	Hexagonal ferrites	3.70
3.7.5	Applications	3.70
3.8	Superconductive Ceramics	3.70
3.8.1	Applications of superconductors	3.77
3.9	Optical Fibers	3.79
3.9.1	Optical fiber basics	3.79
<b>Chapter 4 Metals</b>		<b>4.1</b>
4.1	Considerations in Alloy Selection	4.1
4.1.1	Introduction	4.1
4.1.2	Selection criteria	4.1
4.1.3	Composition	4.1
4.1.4	Product forms	4.2
4.1.5	Strengthening mechanisms	4.5
4.1.6	Mechanical properties	4.6
4.1.7	Physical properties	4.7
4.1.8	Manufacturing considerations	4.8
4.2	Comparative Data on Metals	4.10
4.2.1	Yield strength comparisons	4.10
4.2.2	Modulus of elasticity (Young's modulus) and stiffness	4.10
4.2.3	Strength-to-density ratios	4.10
4.2.4	Thermal conductivity	4.13
4.2.5	Electrical resistivity	4.13
4.2.6	Heat absorption	4.13
4.2.7	Ferrous metals (steels)	4.14
4.2.8	Composition-wrought ferrous alloys	4.15
4.2.9	High-permeability magnetic alloys	4.20
4.2.10	Thermal expansion <b>properties</b> of alloys	4.35
4.2.11	General comments on metal fabrication	4.41
4.2.12	Electrical-resistance alloys and electrical resistivity properties of some ferrous alloys	4.41
4.2.13	Aluminum and aluminum alloys	4.42
4.2.14	Beryllium and beryllium alloys	4.48
4.2.15	Fabrication of beryllium alloys	4.51
4.2.16	Copper and copper alloys	4.52
4.2.17	Magnesium alloys	4.57
4.2.18	Nickel and nickel alloys	4.60
4.2.19	Titanium and titanium alloys	4.61
4.2.20	High-density materials	4.66
4.2.21	Refractory metals	4.67
4.2.22	Precious metals	4.69
<b>Chapter 5 Solder Technologies for Electronic Packaging and Assembly</b>		<b>5.1</b>
5.1	Introduction	5.1
5.1.1	Scope	5.1
5.1.2	Surface mount technology	5.2
5.1.3	Industry trends	5.2
5.1.4	Interdisciplinary and systems approach	5.7
5.2	Solder Materials	5.8
5.2.1	Solder alloys	5.8

5.11	Lead-Free Solders	5.87
5.11.1	Status of worldwide <b>legislation</b>	5.87
5.11.2	Technology and approaches	5.90
5.11.3	Pb-free solder vs. Pb-bearing solder	5.94
5.11.4	Solder alloy <b>selection—general criteria</b>	5.94
5.11.5	Selection menu—Pb-free solder	5.94
5.11.6	Pb-free recommendations	5.103
5.12	Suggested Reading	5.107
<b>Chapter 6 Electroplating and Deposited Metallic Coatings</b>		<b>6.1</b>
6.1	Electroplating for Electronic Applications	6.1
6.2	The Plating Cell	6.2
6.2.1	Cathode reactions	6.2
6.2.2	Anode reactions	6.3
6.2.3	Cleaning	6.3
6.2.4	Current distribution	6.5
6.2.5	Deposit quality	6.7
6.2.6	Brush plating	6.7
6.2.7	Copper	6.8
6.3	Acid Copper Plating	6.8
6.4	Cyanide Copper Plating	6.11
6.5	Pyrophosphate Copper	6.11
6.5.1	Other copper plating processes	6.12
6.6	Nickel Plating	6.12
6.7	Precious Metals	6.14
6.7.1	Silver	6.15
6.7.2	Rhodium	6.16
6.7.3	Palladium	6.17
6.7.4	Gold	6.17
6.7.5	Deposit hardness	6.20
6.8	Deposit Performance	6.20
6.9	Pulse <b>Plating</b>	6.22
6.9.1	Electroless plating	6.23
6.10	Tin and Tin Alloy Plating	6.25
6.11	Environmental Storage Factors	6.29
6.11.1	Tin whiskers	6.30
6.11.2	Lead-free electrodeposits	6.34
<b>Chapter 7 Printed Circuit Board Fabrication</b>		<b>7.1</b>
7.1	Introduction	7.1
7.1.1	Background and history	7.2
7.2	Materials of Construction for Printed Circuit Laminates	7.5
7.2.1	Reinforcements	7.6
7.2.2	Organic resins	7.8
7.2.3	Flexible (unreinforced) laminates	7.10
7.2.4	Foils	7.10
7.3	Laminate Types for PCBs	7.13
7.3.1	Single-clad laminates	7.13
7.3.2	Double-clad laminates	7.13
7.4	Laminate Selection	7.13
7.5	Laminate <b>Material</b> Preparation	7.14
7.5.1	Lamination methods	7.14
7.5.2	Batch	7.14

7.5.3	Continuous lamination	7.15
7.5.4	Vacuum-assisted lamination	7.16
7.5.5	Vacuum-assisted autoclave lamination	7.16
7.6	Generic Process Overview for a Plated-through Hole Printed Circuit	7.18
7.6.1	Stacking and pinning	7.18
7.6.2	Drilling	7.19
7.6.3	Hole preparation and metallization	7.19
7.6.4	Resist coating	7.22
7.6.5	Image patterning	7.23
7.6.6	Image development	7.24
7.6.7	Electroplating of the circuit pattern	7.24
7.6.8	Resist stripping	7.24
7.6.9	Copper pattern etching	7.24
7.6.10	Solder mask	7.25
7.6.11	Solderable finishes	7.32
7.6.12	Edge card contact plating	7.36
7.6.13	Depanelization processing	7.37
7.6.14	Edge beveling	7.38
7.6.15	Additive and subtractive processing	7.38
7.7	Single-Sided Circuit Process Examples	7.39
7.7.1	Print-and-etch	7.39
7.7.2	Foil routing	7.39
7.7.3	Direct printing with conductive ink	7.42
7.7.4	Flush grinding	7.42
7.8	Double-Sided Circuit Process Examples	7.42
7.8.1	Panel plate, tent, and etch	7.42
7.8.2	Panel plate, pattern plate	7.43
7.8.3	Pattern plate	7.43
7.8.4	Printed-through hole	7.43
7.9	Standard Multilayer <b>Circuit</b> Process Example	7.43
7.9.1	Inner layer image requirements	7.43
7.9.2	Resist coating	7.44
7.9.3	Exposure methods	7.45
7.9.4	Development	7.45
7.9.5	Etching	7.45
7.9.6	Resist stripping	7.45
7.9.7	Copper circuit surface preparation	7.45
7.9.8	Lay-up for lamination	7.45
7.9.9	Lamination methods	7.46
7.9.10	Drilling	7.47
7.9.11	Hole cleaning and <b>etchback</b>	7.47
7.9.12	Subsequent processes for multilayer PCB manufacture	7.47
7.10	Mass Lamination	7.47
7.11	Metal-Core Printed Circuit Boards	7.48
7.11.1	Double-sided metal-core	7.50
7.11.2	Multilayer metal core structures	7.50
7.12	Flexible Circuits	7.50
7.12.1	Single-sided	7.50
7.12.2	Double-sided	7.51
7.12.3	Multilayer	7.51
7.12.4	Rigid-flex	7.52
7.13	High-Density Interconnection (HDI) Structures	7.53
7.13.1	HDI substrate construction types	7.54
7.13.2	Build-up board example	7.56
7.13.3	Co-laminated structure example	7.57

7.13.4	Sequential laminated structure example	7.57
7.14	Inspection, Evaluation, and Test of Printed Circuits	7.57
7.14.1	Inspection points for printed circuits	7.58
7.14.2	Cross-section evaluation	7.59
7.14.3	Electrical testing	7.59
7.15	Future Directions	7.60
7.16	Summary	7.61
<b>Chapter 8 Materials and Processes for Hybrid Microelectronics and Multichip Modules</b>		<b>8.1</b>
8.1	Introduction	8.1
8.2	Ceramic Substrates for Hybrid Circuits	8.2
8.3	Surface Properties of Ceramics	8.4
8.4	Thermal Properties of Ceramic Materials	8.6
8.4.1	Thermal conductivity	8.6
8.4.2	Specific heat	8.6
8.4.3	Temperature coefficient of expansion	8.8
8.5	Mechanical Properties Of Ceramic Substrates	8.8
8.5.1	Modulus of elasticity	8.9
8.5.2	Modulus of rupture	8.9
8.5.3	Tensile and compressive strength	8.11
8.5.4	Hardness	8.13
8.5.5	Thermal shock	8.14
8.6	Electrical Properties of Ceramics	8.15
8.6.1	Resistivity	8.15
8.6.2	Breakdown voltage	8.16
8.6.3	Dielectric properties	8.17
8.7	Properties of Substrate Materials	8.19
8.7.1	Aluminum oxide	8.19
8.7.2	Beryllium oxide	8.19
8.7.3	Aluminum nitride	8.20
8.7.4	Diamond	8.23
8.7.5	Boron nitride	8.24
8.7.6	Silicon carbide	8.25
8.8	Composite Materials	8.27
8.8.1	Aluminum silicon carbide	8.28
8.8.2	Dymalloy	8.29
8.9	Thick Film Technology	8.30
8.9.1	The active element	8.32
8.9.2	The adhesion element	8.32
8.9.3	The organic binder	8.33
8.9.4	The solvent or thinner	8.34
8.9.5	Fabrication of thick film paste	8.34
8.9.6	Parameters of thick film paste	8.36
8.10	Thick Film Conductor Materials	8.39
8.10.1	Gold conductors	8.40
8.10.2	Silver conductors	8.40
8.10.3	Copper conductors	8.41
8.11	Thick Film Resistor Materials	8.42
8.11.1	Electrical properties of thick film resistors	8.45
8.11.2	Time-zero properties	8.46
8.11.3	Time-dependent properties	8.50
8.11.4	Process considerations for thick film resistors	8.53
8.12	Thick Film Dielectric Materials	8.53

8.13	Overglaze Materials	8.54
8.14	Screen Printing	8.55
8.15	Drying Thick Film Paste	8.57
8.16	Firing Thick Film Paste	8.58
8.17	Thick Film—Summary	8.59
8.18	Thin Film Technology	8.59
8.19	Deposition Technology	8.60
8.19.1	Sputtering	8.60
8.19.2	Evaporation	8.61
8.19.3	Comparison between sputtering and evaporation	8.64
8.19.4	Electroplating	8.64
8.19.5	Photolithographic processes	8.64
8.20	Thin Film Materials	8.65
8.20.1	Thin film resistors	8.65
8.20.2	Barrier materials	8.66
8.20.3	Conductor materials	8.67
8.20.4	Thin film substrates	8.67
8.21	Comparison of Thick Film and Thin Film	8.67
8.22	Copper Metallization Technologies	8.68
8.22.1	Direct bond copper	8.69
8.22.2	Plated copper technology	8.70
8.22.3	Active metal brazing copper technology	8.70
8.23	Comparison of Copper Metallization Technologies	8.70
8.24	Summary of Substrate Metallization Technologies	8.71
8.25	Assembly of Hybrid Circuits	8.71
8.25.1	Chip-and-wire technology	8.71
8.25.2	Direct eutectic bonding of semiconductor devices	8.71
8.25.3	Organic bonding materials	8.74
8.25.4	Solder attachment	8.75
8.25.5	Wire bonding	8.79
8.26	Packaging	8.86
8.26.1	Hermetic packages	8.87
8.26.2	Metal packages	8.88
8.26.3	Methods of sealing metal packages	8.90
8.26.4	Ceramic packages	8.92
8.26.5	Methods of sealing ceramic packages	8.92
8.26.6	Nonhermetic packaging approaches	8.93
8.26.7	Plug-in packages	8.94
8.26.8	Small-outline package	8.94
8.26.9	Ceramic chip carriers	8.95
8.26.10	Packages for power hybrid circuits	8.96
8.27	Multichip Modules	8.97
8.27.1	The MCM-L technology	8.97
8.27.2	The MCM-C technology	8.99
8.27.3	The MCM-D technology	8.101
8.27.4	Summary	8.101
<b>Chapter 9 Adhesives, Underfills, and Coatings in Electronics Assemblies</b>		<b>9.1</b>
9.1	Introduction	9.1
9.2	Rheology	9.2
9.2.1	<b>Rheological</b> response and behavior	9.3
9.2.2	Measuring rheology	9.6

9.3	Curing of Adhesive Systems	9.12
9.3.1	Thermal cure	9.12
9.3.2	Ultraviolet (UV) curing	9.17
9.4	Glass Transition Temperature	9.19
9.5	Coefficient of Thermal Expansion	9.22
9.6	Young's Modulus	9.23
9.7	Applications	9.24
9.7.1	Surface mount adhesive	9.24
9.7.2	Underfills	9.43
9.7.3	Electrically conductive adhesives	9.48
9.7.4	Thermal <b>management</b>	9.51
9.7.5	Conformal coatings	9.54
9.8	Acknowledgments	9.59
Chapter 10 Thermal Management Materials and Systems		10.1
10.1	Introduction	10.1
10.1.1	Temperature effects on circuit operation	10.2
10.1.2	Temperature effects on physical construction	10.3
10.2	Understanding of Thermal Management	10.4
10.2.1	Second law of thermodynamics	10.4
10.2.2	Heat transfer mechanisms	10.4
10.3	Unit Conversions	10.13
10.4	Packaging Overview	10.13
10.4.1	Single-chip package	10.13
10.4.2	Multichip package	10.14
10.4.3	Board level	10.14
10.5	Packaging Materials	10.16
10.5.1	Semiconductors	10.18
10.5.2	Die attach materials	10.20
10.5.3	Substrates and metallizations	10.23
10.5.4	Substrate attach	10.43
10.5.5	Packages	10.44
10.5.6	Thermal interface materials	10.69
10.5.7	Printed wiring boards	10.75
<b>10.5.8</b>	<b>Flexible PCBs</b>	<b>10.82</b>
10.5.9	Plating	10.82
10.5.10	Gases	10.83
10.6	Factors Determining Thermal Resistance	10.84
10.6.1	Semiconductor dimensions	10.84
10.6.2	Die attach material and thickness	10.87
10.6.3	Substrate material and <b>thickness</b>	10.88
10.6.4	Substrate attach material and thickness	10.89
10.6.5	Package material	10.89
10.6.6	Package interface	10.90
