1	Charge Transport in Conjugated Polymers	3
1.1	Introduction	3
1.2	The Electronic Ground State	4
1.3	Charge Transport Carriers	6
1.3.1	Soliton	7
1.3.2	Polaron and Bipolaron	9
1.4	Transport Properties of Polymers	12
1.5	Factors Influencing the Transport Properties of Polymers	14
1.5.1	Disorder	14
1.5.2	Doping	15
1.5.3	Interchain Coupling	17
1.6	Models of Charge Transport in Conducting Polymers	18
1.7	Conclusions	27
	Acknowledgements	28
	References	28
2	Electrical Properties of Doped Conjugated Polymers	37
2.1	Introduction	37
2.2	Metallic State	39
2.2.1	Conductivity	40
2.2.2	Magnetoconductance	50
2.2.3	Thermoelectric Power	55
2.2.4	Magnetic Susceptibility and Specific Heat	56
2.3	Critical and Insulating States	58

2.4	Summary	63
	References	65
3	Non Linear Optical Properties of Polymers for Electronics	69
3.1	Introduction	69
3.2	NLO Polymer Issues for Device Applications	70
3.3	Properties of Third-Order NLO Polymers	71
3.3.1	Background of Third-Order NLO Polymer Research	71
3.3.2	Poly(arylenevinylene), PAV	72
3.3.3	n-BCMU-PDA	75
3.3.4	PT	76
3.3.5	Processible π -Conjugated Polymers	76
3.3.6	Third-Order NLO Polymer Waveguides	82
3.4.	Properties of Second-Order NLO Polymers	84
3.4.1	Azo-Dye-Functionalised, Poled Polymers for Second-Order Non Linear Optics	84
3.4.2	EO Polymers	87
3.4.3	Serially-Grafted Polymer Waveguides	88
3.4.4	Refractive Index Grating Fabrication into Azo-Dye- Functionalised Polymer Waveguides	90
3.5	Future Targets of NLO Polymers for Optical Device Applications	93
3.6	Conclusions	94
	Acknowledgements	94
	References	94
4	Luminescence Studies of Polymers	99
4.1	Introduction	99
4.2	Basic Photophysical Deactivation Processes	100
4.2.1	Luminescence	101
4.2.2	Bimolecular Photophysical Processes	103

4.2.3	Quenching Processes	104
4.3	Methods for Fluorescence Studies	105
4.3.1	Time-Correlated Single-Photon Counting Studies	105
4.3.2	Quantum Yields	105
4.4	Fluorescence of Polymers, Excimer Fluorescence	106
4.4.1	Fluorescence of Polymers in Solution	110
4.4.2	Fluorescence of Polymers in Gel State	122
4.5	Conclusions	136
	Acknowledgements	136
	References	136
5	Polymers for Light Emitting Diodes	141
5.1	Introduction	141
5.2	The Physics of Electroluminescent Devices	142
5.2.1	The Physics of Conjugated Polymers	142
5.2.2	The Physics of the Device	144
5.2.3	LED Characterisation	147
5.3	Polymeric Structures for LED	148
5.3.1	Polyphenylenes	148
5.3.2	Polythiophenes	164
5.4	Recent Developments	168
5.4.1	Polarised Electroluminescence	168
5.4.2	Lifetime and Degradation in LEDs	170
5.4.3	Microcavities	170
5.5	Concluding Remarks	171
	References	172
6	Photopolymers and Photoresists for Electronics	185
6.1	Introduction	185

6.2	Microolithography Process	187
6.2.1	Resist Coating	188
6.2.2	Exposure	188
6.2.3	Development	189
6.2.4	Post Baking	190
6.2.5	Etching	190
6.2.6	Resist Removal (Stripping)	190
6.2.7	Doping	190
6.3	Resist Requirements	190
6.3.1	Solubility	191
6.3.2	Adhesion	191
6.3.3	Etching Resistance	191
6.3.4	Sensitivity and Contrast	191
6.4	Resist Materials	193
6.4.1	Conventional Photoresists	193
6.4.2	Deep-UV Photoresists	197
6.4.3	Electron-Beam Resists	202
6.4.4	X-Ray Resists	206
6.4.5	Special Resists	208
6.5	Conclusions	212
