PREFACE	vii
GLOSSARY	xiii
1. INTRODUCTION	1
Outline of the Problem	1
Singular Tests	5
2. SIMPLE HYPOTHESIS TESTING	6
Optimum Decision Rule, Neyman-Pearson Criterion	8
Bayes Criterion	11
Minimax Test	13
Sufficiency	15
Receiver Operating Characteristics	16
3. SIMPLE HYPOTHESES, MULTIPLE OBSERVATIONS	20
Multiple but Correlated Observations	23
Two Observations	23
Multiple Observations	27
Detection of a Known Signal in White Noise	28
4. SIGNAL KNOWN EXCEPT FOR SOME UNKNOWN PARAMETERS	33
Introduction	33
Analytic Representation of Signals	35
Distribution of the Likelihood Ratio	42
5. SYNTHESIS OF FILTERS	46
Signal Known Exactly	46
Signal of Unknown Phase	46
A Sequence of Pulses of Incoherent Phase	47
6. TESTS IN THE ABSENCE OF AN A PRIORI DISTRIBUTION	48
7. DETECTION OF KNOWN SIGNALS IN COLORED NOISE	54
The Karhunen-Loève Expansion	55
Definitions	57
Theorems	58
The Representation	63

CONTENTS

The Detection Problem: Known Signal in Gaussian Colored Noise	66
Distribution of the Likelihood Ratio	67
Heuristic Discussion of the Test Function	71
8. DETECTION OF STOCHASTIC SIGNALS IN NOISE	75
Introduction	75
Derivation of the Likelihood Ratio	76
Probabilities of Error	82
First Method	83
Second Method	86
9. SEQUENTIAL DETECTION	90
Test for a Known Signal in White Noise with Continuous Observations	90
Known Signals in Colored Noise	96
Optimum Property of the SPRT	97
Signals of Unknown Strength	102
Signals with Nuisance Parameters	105
Sequential Estimation of Parameters	106

APPENDIX

A. SAMPLING ANALYSIS	109
Definition	111
Existence of the Limit	111
Covariance Function of $n(t)$	112
Spectral Density Function of $n(t)$	113
High-frequency Form of the Sampling Theorem	113
B. REFERENCES	116
General Notes	116
Notes by Chapter	117
BIBLIOGRAPHY	121
INDEX	125
