

CONTENTS

PREFACE **xxiii**

1 INTRODUCTION **1**

1-1 Overview of AM, FM, and FM Stereo Receivers **1**

Superheterodyne receivers **1**

Amplitude modulation **2**

Frequency modulation **4**

AM-FM receivers **6**

FM stereo **6**

Organization of This Text **8**

Looking Ahead **10**

2 POWER SUPPLIES **13**

Objectives **13**

2-1 Transformer Fundamentals **13**

Secondary voltage and current **13**

Multiple secondaries **14**

Power relationships **14**

Isolation properties of a transformer **15**

2-2 Filament Power Supplies **16**

2-3	Half-Wave Rectifiers	17	
	<i>Basic circuit</i>	17	
	<i>Filter capacitors</i>	17	
	<i>Half-wave rectifier with filter capacitors</i>		19
	<i>Surge current</i>	20	
	<i>Vacuum-tube half-wave rectifier</i>		20
	<i>Filament string</i>	21	
	<i>Plate circuit</i>	21	
	<i>Filter circuit</i>	21	
	<i>Effect of ripple</i>	22	
2-4	Full-Wave Rectifier Using Center-Tapped Transformer		22
	<i>Vacuum-Tube Full-Wave Rectifier Variation</i>		24
	<i>Use of an inductor as a filter element</i>		25
2-6	Bridge Rectifier	25	
2-7	Regulated Power Supplies	26	
	<i>Zener regulators</i>	27	
	<i>Variation in load current</i>		28
	<i>Pass transistor regulator</i>		29
	Voltage Doublers	30	
	<i>Summary</i>	33	
	<i>Problems</i>	33	
	<i>References</i>	35	
3	VACUUM-TUBE AND SOLID-STATE BIASING ARRANGEMENTS		36
	<i>Objectives</i>	36	
3-1	Cathode Biasing (Self-Biased) Triode Amplifier		37
	<i>Biasing requirements of vacuum tubes</i>		37
	<i>Plate characteristics of a triode</i>		37
	<i>RC-coupled triode amplifier</i>		38
	<i>Q-point</i>	40	
	<i>AC operation</i>	40	
	<i>AC load line</i>	41	
	<i>Dynamic transfer curve</i>	41	
	<i>Degeneration by cathode resistor</i>		42
	<i>Cathode bypass capacitor</i>		43
	<i>Advantages of negative feedback</i>		43

3-2	Contact (Grid Leak)-Biased Triode Amplifier	43	
3-3	Biasing Requirements of Bipolar Junction Transistors (BJTs)		44
	<i>Biasing the base-emitter junction</i>	45	
3-4	Base Bias	46	
	<i>Signal amplification</i>	47	
	<i>AC junction resistance</i>	47	
	<i>Demonstration circuit</i>	49	
	<i>Input resistance to base</i>	49	
	<i>Input impedance Z_{in} for base bias</i>		50
	<i>Gain formula for base bias</i>	51	
	<i>Disadvantages of the base-bias circuit</i>		51
3-5	Base Bias with Emitter Feedback (BBEF)		52
	<i>Collector-current stability</i>	52	
	<i>AC characteristics</i>	53	
3-6	Base Bias with Collector Feedback (BBCF)		53
	<i>Input impedance, Z_{in}</i>	54	
	<i>Collector-current stability</i>	54	
	<i>Gain dependence upon AC junction resistance</i>		55
3-7	Base Bias with Collector and Emitter Feedback (BBCEF)		55
3-8	Base Bias with Separate Supply (BBSS)	56	
	Universal Bias	57	
	<i>Input impedance</i>	58	
	<i>Stability of the universal-bias arrangement</i>		59
	<i>Modified universal bias</i>	59	
	Universal Bias with Collector Feedback (UBCF)		60
	Emitter Bias with Two Supplies (EBTS)	62	
	Miscellaneous Topics	63	
	<i>Biasing PNP transistors</i>	63	
	<i>Relocation of ground</i>	63	
	<i>Emitter bypass capacitor</i>	65	
	<i>Emitter bypass capacitance versus input impedance</i>		67
	Junction Field-Effect Transistors (JFETs)	67	
	<i>Junction FET (JFET)</i>	68	
	<i>Drain characteristics</i>	71	
	<i>Channel material</i>	72	

	<i>DC voltage polarities</i>	73	
	<i>FET versus BJT biasing</i>	73	
	JFET Biasing Arrangements	74	
	<i>Self-bias</i>	74	
	<i>DC load line for self-biased JFET RC-coupled amplifier</i>		75
	<i>Source biasing</i>	75	
	<i>Voltage-divider bias</i>	76	
	<i>Modification</i>	77	
	Insulated Gate FETs—MOSFETs	77	
	<i>Depletion and enhancement modes</i>		78
	<i>Substrate</i>	78	
	<i>Dual-gate MOSFETs</i>	80	
	<i>Handling MOSFETs</i>	80	
3-16	<i>Biasing Arrangements for MOSFETs</i>	81	
	<i>Biasing dual-gate MOSFETs</i>	82	
	<i>Summary</i>	83	
	<i>Problems</i>	85	
	<i>References</i>	88	
4	AUDIO AND POWER AUDIO AMPLIFIERS		89
	<i>Objectives</i>	89	
4-1	<i>Cascaded Stages</i>	90	
4-2	<i>Direct-Coupled Amplifiers</i>	91	
	<i>Complementary amplifier</i>	92	
	<i>DC-stabilized direct-coupled amplifier</i>		93
	<i>Darlington pair</i>	94	
4-3	<i>Amplifier Configurations</i>	95	
	<i>Common-base configuration</i>	95	
	<i>Cathode follower</i>	96	
	<i>Emitter follower (common collector)</i>		97
4-4	<i>Tube-Type Single-Ended Power Audio Amplifiers</i>		98
	<i>Output transformer</i>	98	
	<i>Plate-to-speaker impedance matching</i>		99
	<i>Output circuit operation</i>	100	
4-5	<i>BJT Single-Ended Power Audio Amplifiers</i>		100
4-6	<i>Vacuum-Tube Push-Pull Audio Amplifiers</i>		101

	<i>Phase inversion by interstage transformer</i>	101
	<i>Output transformer core saturation</i>	
	<i>Hum rejection</i>	103
4-7	<i>Harmonic Distortion</i>	104
4-8	<i>Phase Inverter</i>	105
4-9	<i>Phase Splitter</i>	106
4-10	<i>Solid State Transformer-Coupled Push-Pull Amplifier</i>	108
	<i>Basic circuit</i>	108
	<i>Crossover distortion</i>	109
	<i>Practical circuit</i>	110
	<i>Thermistor</i>	111
	<i>Complete audio section</i>	113
4-11	<i>Output Transformer-Less (OTL) Audio Output Stage</i>	113
4-12	<i>Complementary-Symmetry Amplifier</i>	114
	<i>Practical circuit</i>	115
4-13	<i>Quasi-Complementary Amplifier</i>	
4-14	<i>Commercial Amplifiers</i>	118
	<i>Second commercial amplifier</i>	119
	<i>Third commercial amplifier</i>	120
	<i>Summary</i>	122
	<i>Problems</i>	124
	<i>References</i>	125
5	RADIO-FREQUENCY AMPLIFIERS	126
	<i>Objectives</i>	126
5-1	<i>Introduction</i>	126
5-2	<i>Resonant Circuits</i>	127
	<i>Frequency response</i>	128
	<i>Shunt resistance</i>	129
	<i>Tuned transformers</i>	131
5-3	<i>Triodes as RF Amplifiers</i>	131
	<i>Miller effect</i>	133
	<i>Grounded grid RF amplifier</i>	134
5-4	<i>Pentode RF Amplifiers</i>	134
5-5	<i>Gain of Triode and Pentode RF Amplifiers</i>	

5-6	Transistor (BJT) RF Amplifiers	137	
	Cutoff frequencies	137	
	Typical circuit	137	
	Common-base RF amplifier		138
5-7	Automatic Volume Control (AVC)		140
	Bipolar transistor AVC		141
5-8	JFET RF Amplifiers	142	
	JFET RF amplifier	142	
5-9	MOSFET RF Amplifiers	143	
5-10	Dual-Gate MOSFET Amplifiers		144
	AVC for MOSFET amplifiers		144
	MOSFETs versus JFETs and bipolar		145
5-11	Noise	145	
	Thermal noise	146	
	Shot noise	146	
	Partition noise	146	
	Flicker noise	147	
	Semiconductor resistance noise		147
	Noise spectrum of a transistor		147
	Noise dependence upon bandwidth		148
	Signal/noise ratio	148	
	Noise factor	148	
	Noise factor of cascaded stages		149
	Effects of noise	149	
	Zener regulator noise	151	
	Summary	151	
	Problems	152	
	References	154	

6 FREQUENCY CHANGERS

	Objectives	156	
6-1	Introduction	156	
6-2	Principle of Frequency Changers—Heterodyning		157
6-3	Basic Oscillator Circuits	158	
	Resonant circuits as signal sources		158

	<i>Simple oscillator</i>	159	
	<i>Series-fed Hartley oscillator</i>		160
	<i>Shunt-fed Colpitts oscillator</i>		161
	<i>Transistor versions</i>	162	
6-4	<i>Separate Mixer-Oscillator Frequency Changer</i>		163
6-5	<i>Pentagrid Converters</i>	164	
	<i>Practical circuit</i>	166	
	<i>Capacitive winding</i>	167	
	<i>Series-fed Hartley</i>	168	
	<i>RF amplifier—converter</i>	168	
6-6	<i>Bipolar Transistor Converters</i>		168
6-7	<i>Frequency-Changer Considerations</i>		170
	<i>Oscillator drift</i>	171	
	<i>Oscillator pulling</i>	172	
	<i>Conversion transconductance</i>		172
6-8	<i>Frequency Changers for FM</i>		172
6-9	<i>Automatic Frequency Control (AFC)</i>		173
	<i>Reactance Tube</i>	174	
	<i>FM Frequency Changer with AFC</i>		176
6-11	<i>Voltage-Variable Capacitors (VVC)</i>		178
6-12	<i>FM Converter with VVC Type AFC</i>		179
	<i>Summary</i>	180	
	<i>Problems</i>	182	
	<i>References</i>	183	

PRINCIPLES OF AMPLITUDE MODULATION **184**

	<i>Objectives</i>	184	
7-1	<i>Aspects of Radio Waves</i>		184
	<i>Frequency and wavelength</i>		187
	<i>Reception of radio waves</i>		187
	<i>Field strength</i>	188	
	<i>Ionospheric effects</i>	188	
	<i>Atmospheric effects—lightning</i>		189
	<i>Antennas for AM receivers</i>		189
7-2	<i>Simple Transmission System</i>		190

7-3	<i>Voice Transmission System</i>	192	
7-4	<i>Practical AM Transmitter</i>	194	
	<i>Characteristics of an AM signal</i>		196
	<i>AM sidebands</i>	196	
	<i>AM power distribution</i>	199	
7-5	<i>Tuned Radio-Frequency (TRF) Receivers</i>		199
	<i>Superheterodyne Receivers</i>	200	
	<i>Local oscillator radiation</i>	200	
	<i>Antenna-local oscillator tracking</i>		201
	<i>Images and spurious responses</i>		201
	<i>IF amplifier</i>	202	
	<i>Intermediate frequency selection</i>		202
	<i>Summary</i>	203	
	<i>Problems</i>	204	
	<i>References</i>	205

Summary

Problems

17 TROUBLESHOOTING AM-FM RECEIVERS 462

Objectives 462

17-1 Introduction 462

17-2 AM Normal; No FM 464

17-3 AM or FM; Turn-On Plop (or Hum) Present 470

17-4 AM Normal; Insufficient FM Sensitivity 471

17-5 Oscillations on FM; AM Normal 473

17-6 Distorted Audio on FM; AM Normal 474

17-7 Insufficient AM and FM Sensitivity 474

17-8 Noisy FM; AM Normal 475

17-9 FM Alignment—An Introduction 475

17-10 FM IF Alignment; AM-VTVM Method 476

Discriminator 476

Ratio detector 477

17-11 Sweep/Marker Generator Operation 478

Marker generators 479

17-12 Sweep/Marker FM IF Alignment 481

Discriminator 481

Ratio detector 482

17-13 FM Front-End Alignment 484

Summary 486

Problems 488

18 PRINCIPLES OF FM STEREO 490

Objectives 490

18-1 Compatibility Requirements 490

	Subcarrier transmissions	491	
	SCA	492	
	Direct approach to FM stereo	492	
18-2	(L + R), (L - R) Scheme of Multiplexing		492
	Special property of (L + R) and (L - R)		495
18-3	FM-Stereo System		495
	Modulation percentages	496	
18-4	Simple Balance Modulator		497
	AM waveform restoration	499	
18-5	Frequency Doublers	499	
18-6	Composite FM-Stereo Signal		501
	Second example	502	
	Transmitter block diagram		502
18-7	Matrix Decoder Principles		505
	Separation control	507	
18-8	Time-Division (TD) Decoding		507
	Diode voltages	508	
	Illustration	509	
18-9	Qualitative Description of TD Decoding		513
	Credibility	513	
	Graphical construction of the composite waveform		516
	Block Diagram of a Typical FM-Stereo Receiver		516
	Summary	516	
	Problems	518	
19	FM-STEREO DECODER CIRCUIT ANALYSIS		521
	Objectives	521	
19-1	Typical Matrix Decoder		521
	Input amplifier and cathode follower		523
	19-KHz oscillator-doubler	523	
	Two-phase detector and matrix		524
	FM/FM stereo switching	524	
19-2	Matrix-Decoder Variation		524

	<i>Signal separation</i>	524	
	<i>19-KHz oscillator-doubler</i>		526
	<i>Single-phase detector</i>	526	
	Standard Time-Division Multiplex Decoder		526
	<i>MPX input amplifier and signal separation</i>		526
	<i>19-KHz amplifier and doubler</i>	528	
	<i>Decoder circuit</i>	528	
	<i>Stereo indicator</i>	528	
	<i>Mono-stereo switch</i>	529	
	Bridge-Type Time-Division Decoder		529
	<i>Composite amplifier</i>	529	
	<i>Doubler, 38-KHz AMP, and indicator control</i>		531
	<i>Bridge MPX detector</i>	531	
	<i>Correction</i>	533	
	<i>FM/FM stereo function switch</i>		533
19-5	<i>Bipolar Detector</i>		534
	<i>FM monaural signal path</i>		536
	<i>Typical circuit</i>	536	
19-6	<i>Integrated-Circuit Time-Division Decoder</i>		537
19-7	<i>Phase-Locked-Loop Decoder Principles</i>		539
	<i>PLL decoder</i>	540	
19-8	<i>AM, FM, FM-Stereo Receiver</i>		541
	<i>FM limiter/decoder, mute source</i>		543
	<i>Mute amplifier</i>	543	
	<i>Mute buffer</i>	543	
	<i>PLL stereo decoder</i>		543
	<i>AM section</i>	544	
	Summary	544	
	Problems	545	
20	<i>TROUBLESHOOTING FM-STEREO RECEIVERS</i>		548
	<i>Objectives</i>	548	
	<i>Introduction</i>	548	
	<i>One Channel Inoperative on All Functions</i>		549
	<i>Troubleshooting IC stages</i>	549	

	<i>AM Normal; FM and FM Stereo Inoperative</i>	550
	<i>Precaution</i>	553
20-4	<i>One Channel Inoperative in FM-Stereo Code</i>	554
20-5	<i>Monaural FM Stereo</i>	554
20-6	<i>Nonfunctioning Stereo Indicator</i>	558
20-7	<i>Stereo-Decoder Alignment—An Introduction</i>	558
	<i>Matrix-Decoder Alignment</i>	559
	<i>Matrix-decoder alignment without stereo generator</i>	560
	<i>Time-Division-Decoder Alignment</i>	562
	<i>Time-division-decoder alignment without a stereo generator</i>	563
	<i>PLL-Decoder Alignment</i>	563
	<i>Summary</i>	565
	<i>Problems</i>	566
