PREFACE TO THE THIRD EDITION

PREFACE TO THE FIRST EDITION

ix

## CHAPTER 1

### THE ELEMENTS OF A SYSTEM OF RADIO COMMUNICATION

1-1. Radio Waves . . . . .	1
1-2. Radiation of Electrical Energy . . . . .	4
1-3. Generation and Control of Radio-frequency Power . . . . .	4
1-4. Reception of Radio Signals . . . . .	6
1-5. Nature of a Modulated Wave . . . . .	7
1-6. The Decibel . . . . .	9

## CHAPTER 2

### CIRCUIT ELEMENTS

2-1. Inductance . . . . .	11
2-2. Mutual Inductance and Coefficient of Coupling . . . . .	17
2-3. Skin Effect in Coils and Conductors at Radio Frequencies . . . . .	19
2-4. Condensers and Dielectrics . . . . .	23
2-5. Condensers for Radio Use . . . . .	26
2-6. Coils for Resonant Circuits . . . . .	30
2-7. Shielding of Magnetic and Electrostatic Fields . . . . .	36

## CHAPTER 3

### PROPERTIES OF CIRCUITS WITH LUMPED CONSTANTS

3-1. Series Resonance . . . . .	39
3-2. Parallel Resonance . . . . .	46
3-3. Inductively Coupled Circuits; Theory . . . . .	52
3-4. Analysis of Some Typical Inductively Coupled Circuits . . . . .	57
3-5. Generalized Coupled Circuits . . . . .	66
3-6. Band-pass Filters . . . . .	69
3-7. Thévenin's Theorem . . . . .	71
3-8. Impedance Matching . . . . .	73

## CHAPTER 4

### CIRCUITS WITH DISTRIBUTED CONSTANTS

4-1. Fundamental Relations in Transmission Lines . . . . .	75
4-2. Transmission-line Behavior in Terms of Incident and Reflected Waves . . . . .	78
4-3. Transmission-line Constants . . . . .	87
4-4. Impedance and Power-factor Relations in Transmission Lines . . . . .	90
4-5. Properties of Transmission Lines with Zero Losses . . . . .	92
4-6. Transmission-line Charts . . . . .	94
4-7. Transmission Lines as Resonant Circuits and as Circuit Elements . . . . .	98

4-8.	Artificial Lines . . . . .	100
4-9.	Use of Transmission Lines in Impedance Matching and as Transformers . . . . .	104
4-10.	Miscellaneous Aspects of Transmission Lines . . . . .	109
4-11.	Wave Guides—General Considerations . . . . .	116
4-12.	Rectangular Wave Guides . . . . .	118
4-13.	Circular Wave Guides . . . . .	129
4-14.	Standing Waves, Reflection, and Impedance Considerations in Wave Guides . . . . .	132
4-15.	Miscellaneous Considerations and Properties in Wave Guides . . . . .	137
4-16.	Cavity Resonators . . . . .	143

## CHAPTER 5

## FUNDAMENTAL PROPERTIES OF ELECTRON TUBES

5-1.	Electron Tubes . . . . .	149
5-2.	Electrons, Ions, and Their Motions . . . . .	149
5-3.	Thermionic Emission of Electrons . . . . .	152
5-4.	Secondary Emission . . . . .	156
5-5.	Diodes—Space-charge Effects . . . . .	158
5-6.	Triodes—Action of the Control Grid . . . . .	160
5-7.	Coefficients of Triode Tubes . . . . .	166
5-8.	Pentodes . . . . .	169
5-9.	Screen-grid (Tetrode) Tubes . . . . .	174
5-10.	Beam Tubes . . . . .	177
5-11.	Coefficients of Pentode, Screen-grid, and Beam Tubes . . . . .	182
5-12.	Mathematical Representation of Characteristic Curves of Tubes . . . . .	184
5-13.	Conventional High-vacuum Tubes—Miscellaneous . . . . .	186
5-14.	High-frequency and Transit-time Effects in Diode, Triode, and Pentode Tubes . . . . .	189
5-15.	Electron Optics—Electrostatic Lenses . . . . .	198
5-16.	Magnetic Lenses . . . . .	207
5-17.	Cathode-ray Tubes . . . . .	210
5-18.	Gas Tubes . . . . .	218
5-19.	Microwave Tubes—Klystrons, Magnetrons, and Traveling-wave Tubes . . . . .	222

## CHAPTER 6

VACUUM-TUBE AMPLIFIERS EMPLOYING UNTUNED  
LOAD IMPEDANCES

6-1.	Vacuum-tube Amplifiers . . . . .	223
6-2.	Equivalent Circuit of the Vacuum-tube Amplifier . . . . .	228
6-3.	Resistance-coupled Amplifiers . . . . .	230
6-4.	Transformer-coupled Amplifiers . . . . .	243
X 6-5.	Video-frequency (Wide-band) Voltage Amplifiers . . . . .	250
6-6.	Amplitude Distortion in Amplifiers—Analysis Based on Graphical Methods . . . . .	268
X 6-7.	Mathematical Analysis of Amplitude Distortion and Cross-modulation in Amplifiers . . . . .	277
6-8.	Resistance-coupled and Video Amplifiers Designed for Large Output Voltages . . . . .	284
6-9.	Class A Power Amplifiers . . . . .	287

6-10. Output Transformers in Class A Amplifiers. . . . .	291
6-11. Push-pull Class A Amplifiers. . . . .	299
6-12. Class B and Class AB Audio-frequency Power Amplifiers . . . . .	304
6-13. Cathode-follower Amplifiers . . . . .	308
6-14. Feedback Amplifiers. . . . .	311
6-15. Miscellaneous Considerations in Untuned Amplifiers. . . . .	326

CHAPTER 7

TUNED AMPLIFIERS

7-1. Tuned Voltage Amplifiers—Narrow-band Case . . . . .	338	422
7-2. Tuned Amplifiers—Wide-band Case. . . . .	356	
7-3. Input Admittance of Vacuum-tube Amplifiers . . . . .	362	
7-4. Class C Tuned Amplifiers . . . . .	374	
7-5. Harmonic Generators . . . . .	394	
7-6. Linear Amplifiers. . . . .	397	
7-7. Class C and Similar Operation at Ultra-high Frequencies . . . . .	403	
7-8. The Traveling-wave Tube . . . . .	407	

CHAPTER 8

VACUUM-TUBE OSCILLATORS

8-1. Conventional Vacuum-tube Oscillator Circuits . . . . .	410
8-2. Frequency and Frequency Stability of Generated Oscillations . . . . .	415
8-3. Crystal Oscillators . . . . .	418
8-4. Ultra-high-frequency Oscillators . . . . .	432
8-5. Laboratory Oscillators. . . . .	435
8-6. Parasitic Oscillations . . . . .	439
8-7. Reflex Klystrons . . . . .	442
8-8. Power Klystron Oscillators and Frequency Multipliers. . . . .	451
8-9. Magnetron Oscillators. . . . .	453

CHAPTER 9

MODULATION

9-1. Waves with Amplitude Modulation. . . . .	467	422
9-2. Plate-modulated Class C Amplifiers. . . . .	470	
9-3. Miscellaneous Systems of Amplitude Modulation . . . . .	474	
9-4. Carrier-suppression Systems, and Single-side-band Generation . . . . .	480	
9-5. Frequency-modulated Waves. . . . .	483	
9-6. Representation of Amplitude, Frequency, and Phase-modulated Waves by Means of Rotating Vectors. . . . .	491	
9-7. Production of Frequency- and Phase-modulated Waves . . . . .	493	
9-8. Response of Networks to Frequency-modulated Waves . . . . .	499	

CHAPTER 10

VACUUM-TUBE DETECTORS AND MIXERS

10-1. Detection of Amplitude-modulated Waves. . . . .	502	} 422
10-2. Diode Detectors for Amplitude-modulated Waves. . . . .	502	

10-3.	Miscellaneous Methods for Detection of Amplitude-modulated Waves . . . . .	513
10-4.	Crystal Detectors . . . . .	517
10-5.	Vacuum-tube Voltmeters . . . . .	519
10-6.	Detection of Frequency- and Phase-modulated Signals . . . . .	522
10-7.	Frequency Translation—Heterodyne Detection . . . . .	525
10-8.	Frequency Mixer and Converter Tubes for Superheterodyne Receivers . . . . .	527
10-9.	Crystal and Diode Mixers . . . . .	535
10-10.	Miscellaneous . . . . .	540

## CHAPTER 11

## SOURCES OF POWER FOR OPERATING VACUUM TUBES

11-1.	Cathode Heating Power . . . . .	544
11-2.	Control-grid Bias Voltage . . . . .	546
11-3.	Sources of Anode Power . . . . .	547
11-4.	Rectifiers for Supplying Anode Power . . . . .	548
11-5.	Rectifier Circuits . . . . .	552
11-6.	Behavior of Rectifiers When Used with Filter Systems Having Series-inductance Input . . . . .	556
11-7.	Behavior of Rectifiers when Used with Filter Systems Having Shunt-condenser Input . . . . .	564
11-8.	Filters . . . . .	568
11-9.	Examples of Rectifier-filter Calculations . . . . .	572
11-10.	Vibrator Power-supply Systems . . . . .	573
11-11.	Voltage-regulated Power-supply Systems . . . . .	575

## CHAPTER 12

## MISCELLANEOUS ASPECTS OF TUBES AND CIRCUITS

12-1.	Thermal-agitation Noise . . . . .	577
12-2.	Tube Noise . . . . .	578
12-3.	Relaxation Oscillators . . . . .	586
12-4.	Frequency Division . . . . .	594
12-5.	Trigger Circuits . . . . .	595
12-6.	Generation of Special Wave Shapes . . . . .	597
12-7.	Generation of Time Delays . . . . .	606
12-8.	Counting Circuits . . . . .	606

## CHAPTER 13

## PROPAGATION OF RADIO WAVES

13-1.	General Picture of Factors Involved in Propagation of Radio Waves . . . . .	609
13-2.	The Ground Wave . . . . .	610
13-3.	Space-wave Propagation, with Particular Reference to Very High Frequencies . . . . .	615
13-4.	Reflection of Radio Waves . . . . .	622
13-5.	The Ionosphere . . . . .	624
13-6.	Physical Mechanism by Which Ionosphere Affects Radio-wave Propagation . . . . .	627
13-7.	Theory of Sky-wave Propagation . . . . .	630
13-8.	Measurement of Ionosphere Characteristics . . . . .	637

13-9.	Propagation Characteristics of Radio Waves of Different Frequencies in Relation to the Problems of Practical Radio Communication . . . . .	640
13-10.	Relation of Solar Activity and Meteorological Conditions to the Propagation of Radio Waves . . . . .	655
13-11.	Noise and Static . . . . .	657
13-12.	Rayleigh-Carson Reciprocity Theorem. . . . .	660

## CHAPTER 14

## ANTENNAS

14-1.	Fundamental Considerations Relating to Radiation from Wires. . . . .	662
14-2.	Fundamental Considerations in the Directional Characteristics of Antenna Systems Composed of Wire Radiators Remote from Ground . . . . .	664
14-3.	Effect of Ground—Grounded Antennas . . . . .	677
14-4.	Arrays of Arrays; Array Factors . . . . .	683
14-5.	Antenna Impedance, Mutual Impedance, and Phasing. . . . .	685
14-6.	Power Relations in Antennas; Radiation Resistance, Directivity, and Gain . . . . .	692
14-7.	Some Directional Systems of Particular Interest . . . . .	698
14-8.	Aperture Radiators . . . . .	705
14-9.	Broad-band Considerations in Transmitting Antennas. . . . .	713
14-10.	Practical Transmitting Antennas . . . . .	718
14-11.	Fundamental Properties of Receiving Antennas and Reciprocal Relations Existing between Transmitting and Receiving Properties . . . . .	725
14-12.	Practical Receiving Antennas. . . . .	729

## CHAPTER 15

RADIO TRANSMITTERS, RECEIVERS, AND  
COMMUNICATION SYSTEMS

15-1.	Transmitters—General Considerations. . . . .	732
15-2.	Amplitude-modulated Transmitters for Radio-telephone and Similar Applications . . . . .	733
15-3.	Frequency-modulated Transmitters for Radio-telephone and Similar Signals . . . . .	738
15-4.	Radio-telegraph Transmitters. . . . .	745
15-5.	Radio Receivers—General Considerations . . . . .	748
15-6.	Broadcast Receivers. . . . .	751
15-7.	Miscellaneous Features Relating to Broadcast Receivers. . . . .	754
15-8.	Receivers and Receiver Techniques for Other than Broadcast Purposes . . . . .	760
15-9.	Receiver Noise. . . . .	767
15-10.	Noise and Interference Reduction in Frequency-modulation Systems . . . . .	773
15-11.	Pulse Communication Systems . . . . .	775
15-12.	Radio-relay Systems. . . . .	779

## CHAPTER 16

## RADIO AIDS TO NAVIGATION AND RADAR

16-1.	Radar. . . . .	781
16-2.	Radar Transmitting System . . . . .	786
16-3.	Radar Antennas . . . . .	789

16-4.	Radar Receiving Systems . . . . .	795
16-5.	Radar Beacons . . . . .	802
16-6.	Pulse Navigation Systems (Loran and Gee)	803
16-7.	Radio Altimeters . . . . .	805
16-8.	Radio Range . . . . .	808
16-9.	Airplane Landing Systems . . . . .	813
16-10.	Radio Direction Finding . . . . .	817

## CHAPTER 17

## TELEVISION

17-1.	Elements of a System of Television . . . . .	823
17-2.	Television Pickup Tubes . . . . .	823
17-3.	Scanning, Synchronization, and Blanking	834
17-4.	Frequency Band and Resolution . . . . .	842
17-5.	Television Transmitters . . . . .	843
17-6.	Television Receivers . . . . .	846
17-7.	Color Television . . . . .	854

## CHAPTER 18

## SOUND AND SOUND EQUIPMENT

18-1.	Characteristics of Audible Sounds . . . . .	857
18-2.	Characteristics of the Human Ear . . . . .	862
18-3.	Elements of Acoustics . . . . .	864
18-4.	Effects of Distortion in the Reproduction of Sound .	867
18-5.	Dynamic Loud-speakers Employing Paper Cones . . .	870
18-6.	Horns . . . . .	877
18-7.	Loud-speakers—Miscellaneous Considerations . . .	881
18-8.	The Telephone Receiver . . . . .	883
18-9.	Microphones . . . . .	885

## PROBLEMS
