Preface	xvii
<b>1 Introduction</b>	
1.1 Diffusion Processes in Solids	
1.1.1 Heat Conduction and Thermal Conductivity	
1.1.2 Thermal Conduction Mechanisms	
1.1.3 Mass Diffusion and Diffusivity	8
1.2 Heat Conduction Equations	11
1.2.1 The Conduction Equation	14
1.2.2 Simpler Forms	18
1.2.3 Transformations	19
1.2.4 Other Coordinates	21
1.3 Mass Diffusion Equations	22
1.3.1 The Diffusion Coefficient	23
1.3.2 The Mass Diffusion Equation	24
1.3.3 Distributed Sources and Sinks	26
1.3.4 Equation Transformations	28
1.4 Bounding Conditions and Analysis	29
1.4.1 Temperature Boundary Conditions	30
1.4.2 Concentration Boundary Conditions	35
1.4.3 Initial Conditions	36
1.4.4 Subsequent Analysis	36
1.4.5 Similarity Analysis	37
Problems	40
References	41
<b>2 Steady-State Processes in One Dimension</b>	43
2.1 Plane, Cylindrical, and Spherical Regions	43
2.1.1 The Differential Equations	43
2.1.2 Uniform Conductivity and Diffusivity	45
2.1.3 Composite Regions	48
2.1.4 Contact Resistance	51
2.1.5 Infinite-Region One-Dimensional Conduction	56

2.2	Variable Conductivity	58
2.2.1	Temperature-Dependent Conductivity	58
2.2.2	Location-Dependent Conductivity	61
2.2.3	Temperature-Center and Location-Dependent Conductivity	64
2.3	Variable Conductivity	66
2.4	Internal Energy Generation	68
2.4.1	A Uniform Internal Distributed Energy Source, $q'''$	69
2.4.2	Spatially Varying Distributed Internal Energy Sources, $q'''$	73
2.4.3	Temperature-Dependent Energy Generation, $q'''(t)$	75
2.4.4	Conductivity and Source Strength Both Variable with Temperature and Location	81
2.5	Mass Transfer in One Dimension	82
	Problems	86
	References	91
<b>3</b>	<b>Steady-State Processes in Several Dimensions</b>	<b>93</b>
3.1	Methods of Analysis	93
3.1.1	Steady-State Processes and Example Solutions	95
3.1.2	Separation of Variables for Rectangular, Cylindrical, and Spherical Regions	101
3.2	Rectangular Regions	104
3.2.1	Thin Strips	104
3.2.2	Long Rectangular Rods	107
3.2.3	Rectangular Parallelepipeds	114
3.3	Cylindrical Regions	116
3.3.1	Short Cylinders	116
3.3.2	Circumferential Temperature Variation	119
3.3.3	A Disk-Shaped Input Condition at a Region Boundary	119
3.4	Spherical Regions	121
3.5	Conduction Shape Factors	123
3.5.1	Shape Factor Formulation	125
3.5.2	Some Shape Factor Solutions	127
3.5.3	Other Shape Factor Information	132
3.6	Distributed Energy Sources	133
3.6.1	Multidimensional Distributed Energy Sources	134
3.6.2	Flat Plate with Surface Convection	138
3.7	Variable and Directional Conductivity and Diffusivity	139
3.7.1	Temperature-Dependent Conductivity	140
3.7.2	Conduction in an Orthotropic Region	141
3.8	Contact Resistance in Multidimensional Regions	142
3.9	Numerical Modeling of Steady-State Processes	143
3.9.1	The Finite-Difference Equations	144
3.9.2	The Relaxation Method	151
3.9.3	Temperature-Dependent and Orthotropic Conductivity	155
3.9.4	Numerical Modeling of Contact Resistance	157
3.9.5	Numerical Formulation of Surface Conditions	159
	Problems	164
	References	172

<b>4</b>	<b>Unsteady Processes in One Dimension</b>	<b>173</b>
4.1	Methods of Analysis	173
4.1.1	Separation of Variables	175
4.1.2	Laplace Transformations	177
4.2	Transients in Plane Regions	181
4.2.1	Transients in Plane Layers	182
4.2.2	Convection at Both Surfaces of a Plane Layer	184
4.2.3	Transients in Half-Infinite and Infinite Regions	190
4.2.4	A Distributed Source in a Plane Layer	201
4.3	Transients in Cylindrical and Spherical Regions	204
4.3.1	Cylindrical Regions with Temperature Conditions	204
4.3.2	Spherical Regions with Temperature Conditions	206
4.3.3	Surface Convection Conditions	208
4.4	Periodic Processes	215
4.4.1	Periodics in a Half-Infinite Region	216
4.4.2	A Periodic in a Plane Layer	220
4.5	Transients in Interacting Conduction Regions	222
4.5.1	The Effect of a Surface Layer	224
4.5.2	Composite Barrier Transients	224
4.6	Freezing and Melting Fronts	228
4.6.1	One Region of Temperature Gradient during Phase Change	231
4.6.2	Temperature Gradients in Both Phases	234
4.6.3	Additional Considerations	236
4.7	Moving Sources	237
4.8	The Integral Method Approximation	241
4.8.1	The Formulation	241
4.8.2	Results in Semiinfinite Regions	244
4.9	Numerical Methods in Unsteady Processes	248
4.9.1	Numerical Formulations	249
4.9.2	Explicit-Method Results	252
4.9.3	The Implicit Method	257
4.9.4	Surface Conditions in Numerical Form	258
	Problems	259
	References	273
<b>5</b>	<b>Multidimensional Time-Dependent Processes</b>	<b>274</b>
5.1	Methods of Analysis	274
5.1.1	Multidimensional Product Solutions	276
5.1.2	Several General Methods	281
5.2	Other Multidimensional Transients	286
5.2.1	Rectangular Region Transients	286
5.2.2	Cylindrical Region Transients	289
5.3	Numerical Methods in Multidimensional Transients	292
5.3.1	Numerical Stability in Purely Conductive Processes	293
5.3.2	Surface Point Equations	295
5.3.3	Stability Limits	297
	Problems	299
	References	303

<b>6</b>	<b>Other Mass Diffusion Processes</b>	<b>305</b>
6.1	Mass Diffusion Mechanisms	305
6.1.1	Variable Diffusivity and Transformations	307
6.1.2	Permeable Regions	309
6.1.3	Heat Conduction and Mass Diffusion Analogies	311
6.1.4	Diffusivity Mechanisms	312
6.2	Variable Diffusion Coefficients in Steady State	316
6.2.1	Concentration-Dependent Diffusivity	317
6.2.2	Location-Dependent Diffusivity	323
6.2.3	Diffusivity Dependent on Both Concentration and Location	325
6.3	Transient Mass Diffusion in Plane Layers	326
6.3.1	Transients with Diffusivity Constant and Uniform	327
6.3.2	Concentration-Dependent Diffusivity	333
6.3.3	Some Additional Mechanisms	342
6.4	Interfaces and Moving Boundaries	347
6.4.1	Concentrated Effects as Moving Boundaries	349
6.4.2	Other Heterogeneous Effects	353
6.5	Some Effects of Chemical Reactions	359
6.5.1	Reaction Mechanisms	359
6.5.2	Irreversible Reactions	360
6.5.3	Reversible Reactions	363
6.6	Interacting Diffusion and Conduction, and Other Effects	367
6.6.1	Coupled Heat and Mass Diffusion	369
6.6.2	Diffusion-Controlled Reactions	373
6.6.3	Transpiration Cooling	375
6.6.4	Non-Fickian Diffusion in Porous Media	378
	Problems	391
	References	397
<b>7</b>	<b>Composite Transport Regions</b>	<b>399</b>
7.1	Mechanisms	399
7.2	Contact Resistance Processes	401
7.2.1	The Components of Contact Resistance	402
7.2.2	Characteristics of Contact Regions	405
7.3	Analysis of Contact Resistance	406
7.3.1	The Contact Region Resistance Model	407
7.3.2	Roughness and Deformation	408
7.3.3	Constriction Resistance	412
7.3.4	Gap Region Heat Transfer and Other Effects	419
7.4	Composite Materials	426
7.4.1	General Considerations	426
7.4.2	Small Inclusions	428
7.4.3	Other Geometries and Considerations	432
7.5	Insulation	436
7.5.1	Insulation performance	438
7.5.2	Heat Transfer Mechanisms in Insulation	440

7.5.3	Heat Transfer Components across a Multilayer Barrier	441
7.5.4	Multilayer Overall Heat Transfer	447
	Problems	451
	References	454
<b>8</b>	<b>Other Applications</b>	<b>457</b>
8.1	Introduction	457
8.2	Fins and Extended Surfaces	459
8.2.1	Fin Performance Measures	459
8.2.2	A Fin of Uniform Cross Section	462
8.2.3	Radiation and Other Effects at High Temperatures	468
8.2.4	Tapered Fins	471
8.2.5	Bond or Contact Resistance	472
8.3	Concentrated Moving Sources	473
8.3.1	Quasi-Static Analysis	474
8.3.2	A Uniform Moving Line Source	475
8.3.3	A Moving Point Source	477
8.4	Thermal Stresses	478
8.4.1	Thermal Stress in a Plane Region	480
8.4.2	Stresses in Radial Geometries	483
8.5	Diffusion Subject to Random Disturbances and Effects	487
8.5.1	The Formulation for a Surface in a Fluid	488
8.5.2	Calculated Heat Conduction during a Time Interval	490
8.5.3	Calculation of the Nusselt Number	493
8.5.4	The Effect of Random Events on Condensate Films	495
8.5.5	Summary	496
8.6	Conduction Models of Convection	497
8.6.1	Laminar Films	499
8.6.2	Flow Between Parallel Surfaces	504
8.6.3	Flow in Circular Passages	509
	Problems	515
	References	519
<b>9</b>	<b>Numerical Analysis</b>	<b>522</b>
9.1	Numerical Procedures	522
9.1.1	The Finite-Difference Representation	523
9.1.2	The Finite-Element Representation	524
9.1.3	The Use of the Methods	524
9.2	Finite-Difference Methods	525
9.2.1	First-Order Estimates of Derivatives	525
9.2.2	Cylindrical and Spherical Regions	528
9.2.3	Truncation Errors in Cartesian Coordinates	530
9.2.4	Approximations, Errors, Convergence, and Stability	531
9.2.5	Other and Higher-Order Estimates	533
9.3	Transient Processes	538
9.3.1	Total Truncation Error	538
9.3.2	Stability in Transients	539

9.3.3	Other Explicit and Implicit Formulations	541
9.3.4	Summary	544
9.4	Other Aspects of Finite Differences	545
9.4.1	Calculations for Steady State	546
9.4.2	Conditions at Other Kinds of Boundaries	548
9.5	Variable Physical Properties	552
9.5.1	Numerical Procedures	553
9.5.2	A transformation for a Semiinfinite Solid	556
9.6	The Finite-Element Method	557
9.6.1	Finite-Element Formulation	558
9.6.2	Steady-State Conduction	562
	Problems	568
	References	572

	<b>Appendixes</b>	<b>575</b>
A	Conversion Factors	575
A.1	SI to Other Units	575
A.2	English to Metric Units	576
A.3	Heat Flux, $q''$	576
A.4	Heat Transfer Coefficient, $h$	577
A.5	Thermal Conductivity, $k$	577
A.6	Viscosity, $\mu$	577
A.7	Kinematic Viscosity, $\nu$	578
B	Properties of Solids	579
B.1	Structural and Insulating Materials	580
B.2	Other Materials	584
B.3	Metals	586
B.4	Some Nonmetallic Solids	589
B.5	Thermal Properties of Several Glass Products	590
B.6	Thermal Conductivity of Metals at Cryogenic Temperatures	591
B.7	Properties of Cryogenic Insulation	593
C	Properties of Liquids	595
C.1	Pure Water at Atmospheric Pressure	595
C.2	Other Common Liquids	596
C.3	Liquid Metals	597
D	Properties of Gases and Vapors	599
D.1	Air in SI Units	599
D.2	Air in English Units	602
D.3	Other Gases and Vapors	605
D.4	Properties of Steam	607
E	Diffusivities of Chemical Species	608
E.1	The Temperature Dependence of Water Vapor Diffusion into Air	608
E.2	Gases and Vapors into Air	609
E.3	Measured Diffusion Coefficients in Gases at 1 atm	610
E.4	Diffusion of Solutes into Dilute Water Solutions at 20°C	612

E.5	Diffusion Coefficients at Infinite Dilution in Water at 25°C	613
E.6	Diffusion Coefficients at Infinite Dilution in Nonaqueous Solutions, at 25°C Unless Indicated Otherwise	614
E.7	Solid-State Diffusion Coefficients	615
F	The Error Function	616
G	Laplace Transform Pairs	618
H	Standard Dimensions of Pipes and Tubing	621
	<b>Author Index</b>	<b>623</b>
	<b>Subject Index</b>	<b>627</b>
