Preface vii

Chapter 1	INTRODUCTION	1
Chapter 2	BASIC CONCEPTS OF THE FINITE-DIFFERENCE METHOD	7
2.1	Preliminary Remarks	7
2.2	Approximation	12
2.3	Stability; Convergence Theorem	16
2.4	Stability Analysis of Finite-Difference Computations by the Fourier Transformation	22
2.5	Stability Analysis of Finite-Difference Computations by the Maximum Principle	30
2.6	Construction of Calculation Formulas	34
2.7	Solution of Difference Equations	48

Chapter 3	HEAT-CONDUCTION PROBLEMS	57
3.1	Simple Heat-Conduction Problems	57
3.2	Finite-Difference Algorithms for One-Dimensional Heat-Conduction Problems with Constant Thermal Diffusivities	60
3.3	Characteristics of Numerical Solutions of Heat-Conduction Problems in Cylindrical and Spherical Geometries	67
3.4	Approximations of Boundary Conditions	69
3.5	Finite-Difference Procedures for Heat-Conduction Equations with Variable Coefficients	76
3.6	Fractional-Step Method	82
3.7	Two-Dimensional Heat-Conduction Problems	85
3.8	Difference Methods Applicable to Three-Dimensional Heat-Conduction Problems	91
3.9	Nonlinear Heat-Conduction Problems	74
Chapter 4	CONVECTIVE HEAT TRANSFER	99
4.1	Convection Equations; Boundary Conditions	99
4.2	Characteristics of Computation Algorithms	105
4.3	Numerical Procedures for Heat-Convection Procedures with Low and Medium Rates	109
4.4	High-Rate Convection Processes	116
4.5	Numerical Analysis of Steady-State Convective Problems	122
4.6	Convective Heat Transfer in Compressible Media	125
Chapter 5	CONCLUSION	131
5.1	General Recommendations for the Application of Finite-Difference Techniques to Heat-Transfer Problems	131
	<i>References</i>	135
	<i>Index</i>	139
