

CONTENTS

1. Research Issues and Technology-An Overview	1
2. Combustion and Emissions of Synthetic Fuel Components: Analysis and Modeling	29
3. Synthetic Fuel Atomization Characteristics	49
4. Staged Combustion: Bench-Scale Pyrolysis-Oxidation Studies of Coal-Derived Liquids	69
5. Nonequilibrium Distillation Effects in Vaporizing Droplet Streams	95
6. Intermediate Btu Gas Global Flame Kinetics	113
7. Continuous Combustion Systems: A Study of Fuel Nitrogen Conversion in Jet-Stirred Combustors	133
8. Synthetic Fuel Character Effects on a Rich-Lean Gas Turbine Combustor	151
9. Combustion of Coal-Derived Fuel Oils	173
10. Soot Formation from Synthetic Fuel Droplets	185
11. Effect of Liquefaction Processing Conditions on Combustion Characteristics of Solvent-Refined Coal	201
12. Small-Scale Combustion Testing	223
Index	241
