Preface

vii

chapter 1 Introduction 1

Classification of heat exchangers 2

Organization of the book 6

chapter 2 Thermodynamics, heat transfer, and fluid flow 7

The first and second laws of thermodynamics 7

The nature of heat 9

Modes of heat transfer 10

The convective heat-transfer coefficient 23

Boiling and condensing 38

Summary 44

References 44

chapter 3 Tubular heat exchangers 45

Introduction 45

Types of tubular exchangers 46

Nonmetallic exchangers 74

Noncircular tubes 80

Heat pipes 81

Cartridge heat exchanger 83

Summary 84

References 85

chapter 4	Plate heat exchangers	87
Introduction		87
Plate-and-frame heat exchangers		87
Spiral-plate heat exchangers		96
Panel-coil heat exchangers		102
Plate-fin heat exchangers		104
Summary		111
References		113
chapter 5	Elements of thermal design	115
Introduction		115
Flow arrangements		116
Temperature distribution		118
Mean temperature difference		122
Overall heat-transfer coefficient		124
Heat-exchanger effectiveness and NTU		
Illustrative example		130
Fluid-friction effects in heat exchangers		
Summary		138
References		138
chapter 6	Elements of mechanical design	139
Introduction		139
Scope of mechanical design		139
Codes and standards		140
Properties of materials		141
Stress considerations		151
Vibrations in heat exchangers		162
Corrosion		177
Summary		177
References		177
chapter 7	High- and low-temperature systems	179
Introduction		179
High-temperature systems		180
Low-temperature systems		198
Summary		212
References		212
chapter 8	Degradation of performance	213
Introduction		213
Corrosion in heat exchangers		214

Contents

Fouling	237
Maldistribution of fluid flow	250
Appendix 8A: Tubing defects	259
Appendix 8B: Materials selection for heat exchangers	
References	271
chapter 9	Buying a heat exchanger 273
Introduction	273
Selecting the type of heat exchanger	273
Purchase specifications	287
Tender procedures	289
Evaluating bid proposals	290
Ethics in bid analysis	292
Inspection	293
Testing	295
Summary	298
References	299
chapter 10	Codes and standards 301
Introduction	301
Regulations, codes, standards, and specifications	301
Pressure-vessel codes	302
Standards	306
Summary	309
References	309
chapter 11	Regenerative heat exchangers 311
Introduction	311
Classification of regenerative exchangers	311
Advantages and disadvantages of regenerative heat exchangers	316
Matrix materials	317
Regenerator theory	319
Regeneration with phase change	320
Future applications	320
Summary	321
References	321
chapter 12	Computer analysis of heat exchangers
Introduction	323
The integrated approach	324
The differential approach	326
Summary	330
References	331

appendix A	Glossary	333
appendix B	Directory of heat-exchanger manufacturers	335
	Products and services	335
	Manufacturers	349
appendix C	Typical purchasing specification for tube-and-shell heat exchangers	363
	Introduction	363
	Design	370
	Materials	374
	Fabrication	376
	Tests, weld inspection, and repairs	383
	Low-temperature operation	387
	High-pressure operation	388
appendix D	Bibliographic guide to the literature of heat exchangers	391
	Introduction	391
	Classification of the literature	391
	Books	392
	Periodicals	394
	Engineering-society transactions and conference proceedings	395
	Continuing-education courses	396
	Government reports and publications	397
	National standards	400
	Trade-association publications	400
	Manufacturers' literature	400
	Contract research reports	401
	Summary	402
	Index
