

Contents

	Page
1 Plan and Perspective	—
2 Economic and Cost Factors in the Choice of Fuel and Equipment	18
PRODUCTION OF HEAT	
3 Gas Firing	24
4 Oil Firing	40
5 Fluidized-bed Combustion	58
6 Solid-fuel Firing	64
7 Electrical Heating Fundamentals	94
USE OF HEAT	
8 Furnaces: Principles of Design and Use	116
9 Drying, Conditioning and Industrial Space Heating	166
10 Boiler Plant and Auxiliaries	200
11 Water Treatment	250
PRODUCTION OF MECHANICAL AND ELECTRICAL ENERGY	
12 Devices for Direct Production of Mechanical Energy	272
13 Production of Electrical Power	286
14 Nuclear Power Generation	310
TOTAL ENERGY SYSTEMS AND HEAT SALVAGE	
15 Combined Cycles and Total Energy	342
16 Heat Salvage	366
MATERIALS AND CONTROL	
17 Refractory and Insulating Materials	394
18 Instrumentation and Control	414
ENVIRONMENTAL ASPECTS	
19 Plant Safety: Pollution and Its Prevention	484
20 Corrosion, Erosion and Mineral Deposits on Heating and Moving Surfaces from Fuel Impurities	504
APPENDIXES	
A Natural Fuels and Their Chief Marketable Products	514
B Interconversion of Fuels	528
C Scientific and Technological Principles in the Use of Carbonaceous Fuels	538
D Sampling, Analysis and Testing of Carbonaceous Fuels	554
E World Energy Resources and Demand	584
F Conspectus	591
Index	593
