Chapter 1 Photochemical Conversion and Storage of Solar Energy *Gabriel Stein*

Chemical Utilization and Storage of Solar Quantum Energy	
The Future Role of Wind, Photosynthetic Biomass and Hydro-Electric Power	2
Solar Energy Utilization for Heating and Cooling and the Need for Electricity as such	4
Electricity Generation from Solar Power	10
Photoelectrochemical Cells	11
Semiconductor Devices Based on Photosynthetic Apparatus Models	13
Homogeneous Chemical Systems for Solar Energy Utilization	16
Photogalvanic Devices	16
Photosensitized Water-Splitting in Homogeneous Solutions	17
Thermally Assisted Photochemical Reactions and Photochemically Assisted Thermal Reactions	22
Some Conclusions	23
References	25

Chapter 2 Will Photosynthesis Solve the Energy Problem? *David O. Hall*

Introduction	27
Energy Available	28
Efficiency of Photosynthesis	29
Areas Required for Solar Power	29
Food versus Fuel	34
Leaf Protein	36
Energy Plantations	37
Cellulose	38
Waste Disposal	38

Greenhouse Production
Plant Selection and Breeding
Regulation of Plant Reactions and Products
Nitrogen Fixation
Biocatalytic Hydrogen Production Systems
Carbon Reduction
Artificial Chlorophyll Membranes
Bacteriorhodopsin Membranes
Concluding Remarks
References
Comments *James R. Bolton*

Chapter 3 Electron Transfer in Heterogeneous Photochemical Reactions

Arnim Henglein and Michael Grätzel

Introduction
Energy Considerations
Reactions of the Hydrated Electron with Acceptors in Micelles
Reactions of Radicals and Radical Anions with Acceptors in Micelles
Reactions of Light Excited Molecules in Micelles
Electron Deficient States in Photochemical Reactions
Reactions in Submicellar Systems
References
Comments *Thomas M. Dunn*

Chapter 4 Power Generation by Photoelectrolysis

Heinz Gerischer

Introduction
Basic Processes at Semiconductor Electrodes
 Redox Reactions and Energy Levels
 The Semiconductor-Electrolyte Interface
 The Effect of Illumination
The Source of Photoelectric Power
 Photochemical Charge Separation
 Charge Separation by Electric Field in the Semiconductor
 Charge Separation at the Interface
 The Result of Photoelectrolysis
Photoelectrolytic Cell for the Decomposition of Water
 Energetic Conditions
 Energy Conversion Efficiency
 Combination of n- and p-type Semiconductors
Photoelectrolytic Cell as Direct Power Source
 The Regenerative Mode of Operation
 The Semiconductor Redox Electrolyte Photoelectrolytic Cell
 Spectral Sensitization in Photoelectrolysis
The Stability of Illuminated Semiconductors

Summarizing Remarks	107
References	110
Comments <i>William E. Pinson</i>	113

Chapter 5 Photogalvanic Processes

Norman N. Lichtin 119

Definitions	119
Brief Description of a Prototypical Photogalvanic Converter, The Iron-Thionine Cell	120
Some Chemical Systems which have been Considered for Photogalvanic Converters	122
Processes and Figures of Merit in Photogalvanic Transducers without Capacity for Storage	123
Characterization of Processes in Iron-Thiazine Totally Illuminated- Thin Layer (TI-TL) Cells	125
Absorption of Sunlight; Sensitization	126
The Primary Quantum Yield of Charge Carriers in Solution, Φ_{ces}	132
Lifetime of Charge Carriers in Solution in the Photochemical Steady State, τ_{ces}	133
Φ_i , The Quantum Yield for Current Conversion	136
Limits on the Voltage Conversion Efficiency, E_{vc}	136
Acknowledgment	139
References	140
Comments <i>Morton Z. Hoffman</i>	143

Chapter 6 Photochemical Production of a Fuel

Luca Moggi 147

Introduction	147
Direct Intramolecular Photoreactions	148
Bimolecular Redox Processes	152
Photocatalyzed Systems	154
Conclusion	160
References	161
Comments <i>Alexander D. Kirk</i>	162

Chapter 7 Ultrathin Barriers and Solar Energy Conversion

H. Ti Tien and Béla Karvaly 167

Introduction	167
Ultrathin Barriers and Photosynthesis	169
Overview of Photosynthesis	171
The Thylakoid Membrane of the Photosynthetic Apparatus	172
Solid-State Mechanism of Photosynthesis	173
Ultrathin Barriers and Solar Cells	177
Photoeffect in Homogeneous Semiconductors	177

Photoeffect in Heterogeneous Semiconductors	178
Effect of Junction Thickness	184
Ultrathin Barriers and Pigmented Bilayer Lipid Membranes	187
The Bilayer Lipid Membrane System	188
Properties of Pigmented BLM	194
Dye Sensitized BLM	200
BLM Containing Bacteriorhodopsin	205
Excitation of Pigmented BLM by Pulsed Light	210
Mechanism of Energy Transduction in Pigmented BLM	213
Toward Construction of a Practical Device	218
References	
Comments <i>Michael Grätzel</i>	

Chapter 8 Organic Molecular Energy Storage Reactions

Wolfgang H. F. Sasse

Introduction	
General Aspects of Photochemical Systems Delivering Heat	
General Limitations Applying to Endergonic Quantum Processes	
Absorption of Radiation	
Quantum and Chemical Yields	
The Heat Contents of A and B	
The Temperature of the Exothermic Reaction	
Examples of Thermally Reversible Endothermic Photoreactions	
Photodimers of Anthracenes	
Photodimers in the Naphthalene Series	
Naphthalene-Diphenylacetylene Photoadducts	
Dicyclopentadien-1-one	
1-Ethoxycarbonyl-1H-azepine	
Norbornadienes	
Conclusions	
Acknowledgments	
References	
Comments <i>Robert E. Schwerzel</i>
